# Chapter 1

## LLGL 0.01 Beta Documentation

### LLGL (Low Level Graphics Library)

#### Overview

- **Version:** 0.01 Beta
- **License:** 3-Clause BSD License

#### Progress

- **OpenGL Renderer:** ~85% done
- **Direct3D 11 Renderer:** ~85% done
- **Direct3D 12 Renderer:** ~5% done
- **Vulkan Renderer:** not started yet

#### Getting Started

```
#include <LLGL/LLGL.h>

int main()
{
    // Create a window to render into
    LLGL::WindowDescriptor windowDesc;

    windowDesc.title    = L"LLGL Example";
    windowDesc.visible  = true;
    windowDesc.centered = true;
    windowDesc.width    = 640;
    windowDesc.height   = 480;

    auto window = LLGL::Window::Create(windowDesc);

    // Add keyboard/mouse event listener
    auto input = std::make_shared<LLGL::Input>();
    window->AddEventListener(input);

    //TO BE CONTINUED ...

    // Main loop
    while (window->ProcessEvents() && !input->KeyPressed(LLGL::Key::Escape))
    {
        // Draw with OpenGL, or Direct3D, or Vulkan, or whatever ...
    }

    return 0;
}
```

## Thin Abstraction Layer

```
// Interface:
CommandBuffer::DrawIndexed(unsigned int numVertices, unsigned int firstIndex);

// OpenGL Implementation:
void GLCommandBuffer::DrawIndexed(unsigned int numVertices, unsigned int firstIndex)
{
    glDrawElements(
        renderState_.drawMode,
        static_cast<GLsizei>(numVertices),
        renderState_.indexBufferDataType,
        (reinterpret_cast<const GLvoid*>(firstIndex * renderState_.indexBufferStride))
    );
}

// Direct3D 11 Implementation
void D3D11CommandBuffer::DrawIndexed(unsigned int numVertices, unsigned int firstIndex)
{
    context_>DrawIndexed(numVertices, 0, firstIndex);
}

// Direct3D 12 Implementation
void D3D12CommandBuffer::DrawIndexed(unsigned int numVertices, unsigned int firstIndex)
{
    commandList_>DrawIndexedInstanced(numVertices, 1, firstIndex, 0, 0);
}

// Vulkan Implementation
void VKCommandBuffer::DrawIndexed(unsigned int numVertices, unsigned int firstIndex)
{
    vkCmdDrawIndexed(commandBuffer_, numVertices, 1, firstIndex, 0, 0);
}
```

## Chapter 2

# Module Index

### 2.1 Modules

Here is a list of all modules:

Global utility functions, especially to fill descriptor structures. . . . . [15](#)

## Chapter 3

# Namespace Index

### 3.1 Namespace List

Here is a list of all namespaces with brief descriptions:

|                               |    |
|-------------------------------|----|
| <a href="#">LLGL</a>          | 19 |
| <a href="#">LLGL::Desktop</a> | 52 |
| <a href="#">LLGL::Log</a>     | 53 |
| <a href="#">LLGL::Version</a> | 53 |

## Chapter 4

# Hierarchical Index

### 4.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

|   |     |
|---|-----|
| LLGL::BlendDescriptor . . . . .                         | 55  |
| LLGL::BlendTargetDescriptor . . . . .                   | 56  |
| LLGL::Buffer . . . . .                                  | 57  |
| LLGL::BufferArray . . . . .                             | 58  |
| LLGL::BufferDescriptor . . . . .                        | 59  |
| LLGL::BufferFlags . . . . .                             | 61  |
| LLGL::ClearFlags . . . . .                              | 62  |
| LLGL::Color< T, N > . . . . .                           | 63  |
| LLGL::Color< bool > . . . . .                           | 63  |
| LLGL::Color< float > . . . . .                          | 63  |
| LLGL::Color< T, 3u > . . . . .                          | 66  |
| LLGL::Color< T, 4u > . . . . .                          | 68  |
| LLGL::Color< unsigned char > . . . . .                  | 63  |
| LLGL::CommandBuffer . . . . .                           | 72  |
| LLGL::ComputePipeline . . . . .                         | 86  |
| LLGL::ComputePipelineDescriptor . . . . .               | 87  |
| LLGL::ConstantBufferViewDescriptor . . . . .            | 88  |
| LLGL::RenderingProfiler::Counter . . . . .              | 88  |
| LLGL::DepthDescriptor . . . . .                         | 90  |
| LLGL::Window::EventListener . . . . .                   | 91  |
| LLGL::Input . . . . .                                   | 99  |
| LLGL::GraphicsAPIDependentStateDescriptor . . . . .     | 93  |
| LLGL::GraphicsPipeline . . . . .                        | 94  |
| LLGL::GraphicsPipelineDescriptor . . . . .              | 94  |
| LLGL::ImageDescriptor . . . . .                         | 96  |
| LLGL::BufferDescriptor::IndexBufferDescriptor . . . . . | 98  |
| LLGL::IndexFormat . . . . .                             | 98  |
| LLGL::RenderingDebugger::Message . . . . .              | 101 |
| LLGL::MultiSamplingDescriptor . . . . .                 | 103 |
| LLGL::NativeContextHandle . . . . .                     | 104 |
| LLGL::NativeHandle . . . . .                            | 105 |
| LLGL::ProfileOpenGLDescriptor . . . . .                 | 105 |
| LLGL::Query . . . . .                                   | 107 |
| LLGL::QueryDescriptor . . . . .                         | 108 |
| LLGL::RasterizerDescriptor . . . . .                    | 109 |

|  |     |
|--|-----|
| LLGL::RenderContext . . . . .  | 110 |
| LLGL::RenderContextDescriptor . . . . .                                    | 113 |
| LLGL::RendererID . . . . .   | 114 |
| LLGL::RendererInfo . . . . .   | 116 |
| LLGL::RenderingCaps . . . . .  | 118 |
| LLGL::RenderingDebugger . . . . .  | 124 |
| LLGL::RenderingProfiler . . . . .  | 126 |
| LLGL::RenderSystem . . . . .   | 130 |
| LLGL::RenderSystemConfiguration . . . . .                                  | 144 |
| LLGL::RenderTarget . . . . .   | 145 |
| LLGL::RenderTargetAttachmentDescriptor . . . . .                           | 147 |
| LLGL::RenderTargetDescriptor . . . . .                                     | 148 |
| LLGL::Sampler . . . . .  | 149 |
| LLGL::SamplerArray . . . . .   | 150 |
| LLGL::SamplerDescriptor . . . . .  | 151 |
| LLGL::Scissor . . . . .  | 153 |
| LLGL::Shader . . . . .   | 154 |
| LLGL::ShaderCompileFlags . . . . .   | 156 |
| LLGL::ShaderDisassembleFlags . . . . .                                     | 157 |
| LLGL::ShaderProgram . . . . .  | 157 |
| LLGL::ShaderSource . . . . .   | 164 |
| LLGL::ShaderStageFlags . . . . .   | 167 |
| LLGL::ShaderUniform . . . . .  | 169 |
| LLGL::ShaderSource::SourceHLSL . . . . .                                   | 172 |
| LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor . . . . . | 173 |
| LLGL::StencilDescriptor . . . . .  | 175 |
| LLGL::StencilFaceDescriptor . . . . .                                      | 176 |
| LLGL::BufferDescriptor::StorageBufferDescriptor . . . . .                  | 178 |
| LLGL::StorageBufferViewDescriptor . . . . .                                | 179 |
| LLGL::ShaderSource::StreamOutput . . . . .                                 | 180 |
| LLGL::StreamOutputAttribute . . . . .                                      | 180 |
| LLGL::StreamOutputFormat . . . . .   | 182 |
| LLGL::SubTextureDescriptor . . . . .                                       | 183 |
| LLGL::Texture . . . . .  | 185 |
| LLGL::SubTextureDescriptor::Texture1DDescriptor . . . . .                  | 186 |
| LLGL::TextureDescriptor::Texture1DDescriptor . . . . .                     | 187 |
| LLGL::TextureDescriptor::Texture2DDescriptor . . . . .                     | 187 |
| LLGL::SubTextureDescriptor::Texture2DDescriptor . . . . .                  | 188 |
| LLGL::TextureDescriptor::Texture2DMSDescriptor . . . . .                   | 189 |
| LLGL::TextureDescriptor::Texture3DDescriptor . . . . .                     | 190 |
| LLGL::SubTextureDescriptor::Texture3DDescriptor . . . . .                  | 191 |
| LLGL::TextureArray . . . . .   | 192 |
| LLGL::TextureDescriptor::TextureCubeDescriptor . . . . .                   | 193 |
| LLGL::SubTextureDescriptor::TextureCubeDescriptor . . . . .                | 194 |
| LLGL::TextureDescriptor . . . . .  | 195 |
| LLGL::Timer . . . . .  | 197 |
| LLGL::UniformDescriptor . . . . .  | 199 |
| LLGL::VertexAttribute . . . . .  | 200 |
| LLGL::BufferDescriptor::VertexBufferDescriptor . . . . .                   | 203 |
| LLGL::VertexFormat . . . . .   | 204 |
| LLGL::VideoAdapterDescriptor . . . . .                                     | 206 |
| LLGL::VideoDisplayMode . . . . .   | 207 |
| LLGL::VideoModeDescriptor . . . . .  | 208 |
| LLGL::VideoOutput . . . . .  | 209 |
| LLGL::Viewport . . . . .   | 209 |
| LLGL::VsyncDescriptor . . . . .  | 211 |
| LLGL::Window . . . . .   | 212 |
| LLGL::WindowDescriptor . . . . .   | 215 |

## Chapter 5

# Class Index

### 5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

|   |    |
|---|----|
| <a href="#">LLGL::BlendDescriptor</a>                             |    |
| Blending state descriptor structure . . . . .                     | 55 |
| <a href="#">LLGL::BlendTargetDescriptor</a>                       |    |
| Blend target state descriptor structure . . . . .                 | 56 |
| <a href="#">LLGL::Buffer</a>                                      |    |
| Hardware buffer interface . . . . .                               | 57 |
| <a href="#">LLGL::BufferArray</a>                                 |    |
| Array of hardware buffers interface . . . . .                     | 58 |
| <a href="#">LLGL::BufferDescriptor</a>                            |    |
| Hardware buffer descriptor structure . . . . .                    | 59 |
| <a href="#">LLGL::BufferFlags</a>                                 |    |
| Buffer flags enumeration . . . . .                                | 61 |
| <a href="#">LLGL::ClearFlags</a>                                  |    |
| Command buffer clear flags . . . . .                              | 62 |
| <a href="#">LLGL::Color&lt; T, N &gt;</a>                         |    |
| Base color class with N components . . . . .                      | 63 |
| <a href="#">LLGL::Color&lt; T, 3u &gt;</a>                        |    |
| RGB color class with components: r, g, and b . . . . .            | 66 |
| <a href="#">LLGL::Color&lt; T, 4u &gt;</a>                        |    |
| RGBA color class with components: r, g, b, and a . . . . .        | 68 |
| <a href="#">LLGL::CommandBuffer</a>                               |    |
| Command buffer interface . . . . .                                | 72 |
| <a href="#">LLGL::ComputePipeline</a>                             |    |
| Compute pipeline interface . . . . .                              | 86 |
| <a href="#">LLGL::ComputePipelineDescriptor</a>                   |    |
| Compute pipeline descriptor structure . . . . .                   | 87 |
| <a href="#">LLGL::ConstantBufferViewDescriptor</a>                |    |
| Constant buffer shader-view descriptor structure . . . . .        | 88 |
| <a href="#">LLGL::RenderingProfiler::Counter</a>                  |    |
| Profiling counter class . . . . .                                 | 88 |
| <a href="#">LLGL::DepthDescriptor</a>                             |    |
| Depth state descriptor structure . . . . .                        | 90 |
| <a href="#">LLGL::Window::EventListener</a>                       |    |
| . . . . .   | 91 |
| <a href="#">LLGL::GraphicsAPIDependentStateDescriptor</a>         |    |
| Low-level graphics API dependent state descriptor union . . . . . | 93 |

|   |     |
|---|-----|
| <a href="#">LLGL::GraphicsPipeline</a>                        |     |
| Graphics pipeline interface                                   | 94  |
| <a href="#">LLGL::GraphicsPipelineDescriptor</a>              |     |
| Graphics pipeline descriptor structure                        | 94  |
| <a href="#">LLGL::ImageDescriptor</a>                         |     |
| Image descriptor structure                                    | 96  |
| <a href="#">LLGL::BufferDescriptor::IndexBufferDescriptor</a> | 98  |
| <a href="#">LLGL::IndexFormat</a>                             | 98  |
| <a href="#">LLGL::Input</a>                                   | 99  |
| <a href="#">LLGL::RenderingDebugger::Message</a>              |     |
| Rendering debugger message class                              | 101 |
| <a href="#">LLGL::MultiSamplingDescriptor</a>                 |     |
| Multi-sampling descriptor structure                           | 103 |
| <a href="#">LLGL::NativeContextHandle</a>                     |     |
| Linux native context handle structure                         | 104 |
| <a href="#">LLGL::NativeHandle</a>                            |     |
| Linux native handle structure                                 | 105 |
| <a href="#">LLGL::ProfileOpenGLDescriptor</a>                 |     |
| OpenGL profile descriptor structure                           | 105 |
| <a href="#">LLGL::Query</a>                                   |     |
| Query interface   | 107 |
| <a href="#">LLGL::QueryDescriptor</a>                         |     |
| Query descriptor structure                                    | 108 |
| <a href="#">LLGL::RasterizerDescriptor</a>                    |     |
| Rasterizer state descriptor structure                         | 109 |
| <a href="#">LLGL::RenderContext</a>                           |     |
| Render context interface                                      | 110 |
| <a href="#">LLGL::RenderContextDescriptor</a>                 |     |
| Render context descriptor structure                           | 113 |
| <a href="#">LLGL::RendererID</a>                              |     |
| Renderer identification number enumeration                    | 114 |
| <a href="#">LLGL::RendererInfo</a>                            |     |
| Renderer basic information structure                          | 116 |
| <a href="#">LLGL::RenderingCaps</a>                           |     |
| Rendering capabilities structure                              | 118 |
| <a href="#">LLGL::RenderingDebugger</a>                       |     |
| Rendering debugger interface                                  | 124 |
| <a href="#">LLGL::RenderingProfiler</a>                       |     |
| Rendering profiler model class                                | 126 |
| <a href="#">LLGL::RenderSystem</a>                            |     |
| Render system interface                                       | 130 |
| <a href="#">LLGL::RenderSystemConfiguration</a>               |     |
| Render system configuration structure                         | 144 |
| <a href="#">LLGL::RenderTarget</a>                            |     |
| Render target interface                                       | 145 |
| <a href="#">LLGL::RenderTargetAttachmentDescriptor</a>        |     |
| Render target attachment descriptor structure                 | 147 |
| <a href="#">LLGL::RenderTargetDescriptor</a>                  |     |
| Render target descriptor structure                            | 148 |
| <a href="#">LLGL::Sampler</a>                                 |     |

## Chapter 7

# Module Documentation

### 7.1 Global utility functions, especially to fill descriptor structures.

#### Functions

- `LLGL_EXPORT TextureDescriptor LLGL::Texture1DDesc` (TextureFormat format, unsigned int width)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture1D](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture2DDesc` (TextureFormat format, unsigned int width, unsigned int height)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2D](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture3DDesc` (TextureFormat format, unsigned int width, unsigned int height, unsigned int depth)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture3D](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::TextureCubeDesc` (TextureFormat format, unsigned int width, unsigned int height)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCube](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture1DArrayDesc` (TextureFormat format, unsigned int width, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture1DArray](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture2DArrayDesc` (TextureFormat format, unsigned int width, unsigned int height, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DArray](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::TextureCubeArrayDesc` (TextureFormat format, unsigned int width, unsigned int height, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCubeArray](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture2DMSDesc` (TextureFormat format, unsigned int width, unsigned int height, unsigned int samples, bool fixedSamples=true)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMS](#) type.*
- `LLGL_EXPORT TextureDescriptor LLGL::Texture2DMSArrayDesc` (TextureFormat format, unsigned int width, unsigned int height, unsigned int layers, unsigned int samples, bool fixedSamples=true)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMSArray](#) type.*
- `LLGL_EXPORT BufferDescriptor LLGL::VertexBufferDesc` (unsigned int size, const VertexFormat &vertexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for a vertex buffer.*
- `LLGL_EXPORT BufferDescriptor LLGL::IndexBufferDesc` (unsigned int size, const IndexFormat &indexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for an index buffer.*

- **LLGL\_EXPORT** BufferDescriptor **LLGL::ConstantBufferDesc** (unsigned int size, long flags=BufferFlags::DynamicUsage)  
Returns a [BufferDescriptor](#) structure for a constant buffer.
- **LLGL\_EXPORT** BufferDescriptor **LLGL::StorageBufferDesc** (unsigned int size, const StorageBufferType storageType, unsigned int stride, long flags=BufferFlags::MapReadAccess|BufferFlags::MapWriteAccess)  
Returns a [BufferDescriptor](#) structure for a storage buffer.

### 7.1.1 Detailed Description

### 7.1.2 Function Documentation

#### 7.1.2.1 **LLGL\_EXPORT** BufferDescriptor **LLGL::ConstantBufferDesc** ( unsigned int size, long flags = BufferFlags::DynamicUsage )

Returns a [BufferDescriptor](#) structure for a constant buffer.

#### 7.1.2.2 **LLGL\_EXPORT** BufferDescriptor **LLGL::IndexBufferDesc** ( unsigned int size, const IndexFormat & indexFormat, long flags = 0 )

Returns a [BufferDescriptor](#) structure for an index buffer.

#### 7.1.2.3 **LLGL\_EXPORT** BufferDescriptor **LLGL::StorageBufferDesc** ( unsigned int size, const StorageBufferType storageType, unsigned int stride, long flags = BufferFlags::MapReadAccess|BufferFlags::MapWriteAccess )

Returns a [BufferDescriptor](#) structure for a storage buffer.

#### 7.1.2.4 **LLGL\_EXPORT** TextureDescriptor **LLGL::Texture1DArrayDesc** ( TextureFormat format, unsigned int width, unsigned int layers )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture1DArray](#) type.

#### 7.1.2.5 **LLGL\_EXPORT** TextureDescriptor **LLGL::Texture1DDesc** ( TextureFormat format, unsigned int width )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture1D](#) type.

#### 7.1.2.6 **LLGL\_EXPORT** TextureDescriptor **LLGL::Texture2DArrayDesc** ( TextureFormat format, unsigned int width, unsigned int height, unsigned int layers )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DArray](#) type.

#### 7.1.2.7 **LLGL\_EXPORT** TextureDescriptor **LLGL::Texture2DDesc** ( TextureFormat format, unsigned int width, unsigned int height )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2D](#) type.

7.1.2.8 **LLGL\_EXPORT** TextureDescriptor LLGL::Texture2DMSArrayDesc ( TextureFormat *format*, unsigned int *width*, unsigned int *height*, unsigned int *layers*, unsigned int *samples*, bool *fixedSamples* = true )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMSArray](#) type.

7.1.2.9 **LLGL\_EXPORT** TextureDescriptor LLGL::Texture2DMSDesc ( TextureFormat *format*, unsigned int *width*, unsigned int *height*, unsigned int *samples*, bool *fixedSamples* = true )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMS](#) type.

7.1.2.10 **LLGL\_EXPORT** TextureDescriptor LLGL::Texture3DDesc ( TextureFormat *format*, unsigned int *width*, unsigned int *height*, unsigned int *depth* )

Returns a [TextureDescriptor](#) structure with the [TextureType::Texture3D](#) type.

7.1.2.11 **LLGL\_EXPORT** TextureDescriptor LLGL::TextureCubeArrayDesc ( TextureFormat *format*, unsigned int *width*, unsigned int *height*, unsigned int *layers* )

Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCubeArray](#) type.

7.1.2.12 **LLGL\_EXPORT** TextureDescriptor LLGL::TextureCubeDesc ( TextureFormat *format*, unsigned int *width*, unsigned int *height* )

Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCube](#) type.

7.1.2.13 **LLGL\_EXPORT** BufferDescriptor LLGL::VertexBufferDesc ( unsigned int *size*, const VertexFormat & *vertexFormat*, long *flags* = 0 )

Returns a [BufferDescriptor](#) structure for a vertex buffer.

#### Classes

- struct [BlendDescriptor](#)  
*Blending state descriptor structure.*
- struct [BlendTargetDescriptor](#)  
*Blend target state descriptor structure.*
- class [Buffer](#)  
*Hardware buffer interface.*
- class [BufferArray](#)  
*Array of hardware buffers interface.*
- struct [BufferDescriptor](#)  
*Hardware buffer descriptor structure.*
- struct [BufferFlags](#)  
*Buffer flags enumeration.*
- struct [ClearFlags](#)  
*Command buffer clear flags.*
- class [Color](#)  
*Base color class with N components.*
- class [Color< T, 3u >](#)  
*RGB color class with components: r, g, and b.*
- class [Color< T, 4u >](#)  
*RGBA color class with components: r, g, b, and a.*
- class [CommandBuffer](#)  
*Command buffer interface.*
- class [ComputePipeline](#)  
*Compute pipeline interface.*

- struct [ComputePipelineDescriptor](#)  
*Compute pipeline descriptor structure.*
- struct [ConstantBufferViewDescriptor](#)  
*Constant buffer shader-view descriptor structure.*
- struct [DepthDescriptor](#)  
*Depth state descriptor structure.*
- union [GraphicsAPIDependentStateDescriptor](#)  
*Low-level graphics API dependent state descriptor union.*
- class [GraphicsPipeline](#)  
*Graphics pipeline interface.*
- struct [GraphicsPipelineDescriptor](#)  
*Graphics pipeline descriptor structure.*
- struct [ImageDescriptor](#)  
*Image descriptor structure.*
- class [IndexFormat](#)
- class [Input](#)
- struct [MultiSamplingDescriptor](#)  
*Multi-sampling descriptor structure.*
- struct [NativeContextHandle](#)  
*Linux native context handle structure.*
- struct [NativeHandle](#)  
*Linux native handle structure.*
- struct [ProfileOpenGLDescriptor](#)  
*OpenGL profile descriptor structure.*
- class [Query](#)  
*Query interface.*
- struct [QueryDescriptor](#)  
*Query descriptor structure.*
- struct [RasterizerDescriptor](#)  
*Rasterizer state descriptor structure.*
- class [RenderContext](#)  
*Render context interface.*
- struct [RenderContextDescriptor](#)  
*Render context descriptor structure.*
- struct [RendererID](#)  
*Renderer identification number enumeration.*
- struct [RendererInfo](#)  
*Renderer basic information structure.*
- struct [RenderingCaps](#)  
*Rendering capabilities structure.*
- class [RenderingDebugger](#)  
*Rendering debugger interface.*
- class [RenderingProfiler](#)  
*Rendering profiler model class.*
- class [RenderSystem](#)  
*Render system interface.*
- struct [RenderSystemConfiguration](#)  
*Render system configuration structure.*
- class [RenderTarget](#)  
*Render target interface.*
- struct [RenderTargetAttachmentDescriptor](#)

- Render target attachment descriptor structure.*
- struct [RenderTargetDescriptor](#)
  - Render target descriptor structure.*
- class [Sampler](#)
  - Sampler interface.*
- class [SamplerArray](#)
  - Sampler array interface.*
- struct [SamplerDescriptor](#)
  - Texture sampler descriptor structure.*
- struct [Scissor](#)
  - Scissor dimensions.*
- class [Shader](#)
  - Shader interface.*
- struct [ShaderCompileFlags](#)
  - Shader compilation flags enumeration.*
- struct [ShaderDisassembleFlags](#)
  - Shader disassemble flags enumeration.*
- class [ShaderProgram](#)
  - Shader program interface.*

- `template<typename T, std::size_t N>`  
`bool operator!= (const Color< T, N > &lhs, const Color< T, N > &rhs)`
- `LLGL_EXPORT unsigned int DataTypeSize (const DataType dataType)`  
*Returns the size (in bytes) of the specified data type.*
- `LLGL_EXPORT unsigned int VectorTypeSize (const VectorType vectorType)`  
*Returns the size (in bytes) of the specified vector type.*
- `LLGL_EXPORT void VectorTypeFormat (const VectorType vectorType, DataType &dataType, unsigned int &components)`  
*Retrieves the format of the specified vector type.*
- `LLGL_EXPORT unsigned int ImageFormatSize (const ImageFormat imageFormat)`  
*Returns the size (in number of components) of the specified image format.*
- `LLGL_EXPORT bool IsCompressedFormat (const ImageFormat format)`  
*Returns true if the specified color format is a compressed format, i.e. either `ImageFormat::CompressedRGB`, or `ImageFormat::CompressedRGBA`.*
- `LLGL_EXPORT bool IsDepthStencilFormat (const ImageFormat format)`  
*Returns true if the specified color format is a depth-stencil format, i.e. either `ImageFormat::Depth` or `ImageFormat::DepthStencil`.*
- `LLGL_EXPORT ByteBuffer ConvertImageBuffer (ImageFormat srcFormat, DataType srcDataType, const void *srcBuffer, std::size_t srcBufferSize, ImageFormat dstFormat, DataType dstDataType, std::size_t threadCount=0)`  
*Converts the image format and data type of the source image (only uncompressed color formats).*
- `LLGL_EXPORT bool operator== (const VsyncDescriptor &lhs, const VsyncDescriptor &rhs)`
- `LLGL_EXPORT bool operator!= (const VsyncDescriptor &lhs, const VsyncDescriptor &rhs)`
- `LLGL_EXPORT bool operator== (const VideoModeDescriptor &lhs, const VideoModeDescriptor &rhs)`
- `LLGL_EXPORT bool operator!= (const VideoModeDescriptor &lhs, const VideoModeDescriptor &rhs)`
- `LLGL_EXPORT bool operator== (const StreamOutputAttribute &lhs, const StreamOutputAttribute &rhs)`
- `LLGL_EXPORT bool operator!= (const StreamOutputAttribute &lhs, const StreamOutputAttribute &rhs)`
- `LLGL_EXPORT unsigned int NumMipLevels (unsigned int width, unsigned int height=1, unsigned int depth=1)`  
*Returns the number of MIP-map levels for a texture with the specified size.*
- `LLGL_EXPORT bool IsCompressedFormat (const TextureFormat format)`  
*Returns true if the specified texture format is a compressed format, i.e. either `TextureFormat::RGB_DXT1`, `TextureFormat::RGBA_DXT1`, `TextureFormat::RGBA_DXT3`, or `TextureFormat::RGBA_DXT5`.*
- `LLGL_EXPORT bool IsArrayTexture (const TextureType type)`  
*Returns true if the specified texture type is an array texture.*
- `LLGL_EXPORT bool IsMultiSampleTexture (const TextureType type)`  
*Returns true if the specified texture type is a multi-sample texture.*
- `LLGL_EXPORT TextureDescriptor Texture1DDesc (TextureFormat format, unsigned int width)`  
*Returns a `TextureDescriptor` structure with the `TextureType::Texture1D` type.*

- [LLGL\\_EXPORT TextureDescriptor Texture2DDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2D](#) type.*
- [LLGL\\_EXPORT TextureDescriptor Texture3DDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height, unsigned int depth)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture3D](#) type.*
- [LLGL\\_EXPORT TextureDescriptor TextureCubeDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCube](#) type.*
- [LLGL\\_EXPORT TextureDescriptor Texture1DArrayDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture1DArray](#) type.*
- [LLGL\\_EXPORT TextureDescriptor Texture2DArrayDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DArray](#) type.*
- [LLGL\\_EXPORT TextureDescriptor TextureCubeArrayDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height, unsigned int layers)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::TextureCubeArray](#) type.*
- [LLGL\\_EXPORT TextureDescriptor Texture2DMSDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height, unsigned int samples, bool fixedSamples=true)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMS](#) type.*
- [LLGL\\_EXPORT TextureDescriptor Texture2DMSArrayDesc](#) ([TextureFormat](#) format, unsigned int width, unsigned int height, unsigned int layers, unsigned int samples, bool fixedSamples=true)  
*Returns a [TextureDescriptor](#) structure with the [TextureType::Texture2DMSArray](#) type.*
- [LLGL\\_EXPORT BufferDescriptor VertexBufferDesc](#) (unsigned int size, const [VertexFormat](#) &vertexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for a vertex buffer.*
- [LLGL\\_EXPORT BufferDescriptor IndexBufferDesc](#) (unsigned int size, const [IndexFormat](#) &indexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for an index buffer.*
- [LLGL\\_EXPORT BufferDescriptor ConstantBufferDesc](#) (unsigned int size, long flags=[BufferFlags::DynamicUsage](#))  
*Returns a [BufferDescriptor](#) structure for a constant buffer.*
- [LLGL\\_EXPORT BufferDescriptor StorageBufferDesc](#) (unsigned int size, const [StorageBufferType](#) storageType, unsigned int stride, long flags=[BufferFlags::MapReadAccess](#)|[BufferFlags::MapWriteAccess](#))  
*Returns a [BufferDescriptor](#) structure for a storage buffer.*
- [LLGL\\_EXPORT bool operator==](#) (const [VertexAttribute](#) &lhs, const [VertexAttribute](#) &rhs)
- [LLGL\\_EXPORT bool operator!=](#) (const [VertexAttribute](#) &lhs, const [VertexAttribute](#) &rhs)
- [LLGL\\_EXPORT bool operator==](#) (const [VideoDisplayMode](#) &lhs, const [VideoDisplayMode](#) &rhs)
- [LLGL\\_EXPORT bool CompareSWO](#) (const [VideoDisplayMode](#) &lhs, const [VideoDisplayMode](#) &rhs)  
*Compares the two video display modes in a strict-weak-order (SWO) fashion.*

## 8.1.1 Typedef Documentation

### 8.1.1.1 using LLGL::ByteBuffer = typedef std::unique\_ptr<char[]>

Common byte buffer type.

## Remarks

Commonly this would be an `std::vector<char>`, but the buffer conversion is an optimized process, where the default initialization of an `std::vector` is undesired. Therefore, the byte buffer type is an `std::unique_ptr<char[]>`.

## See also

8.1.1.14 `using LLGL::DebugCallback = typedef std::function<void(const std::string& type, const std::string& message)>`

Debug callback function interface.

## Parameters

|    |                |                                     |
|----|----------------|-------------------------------------|
| in | <i>type</i>    | Descriptive type of the message.    |
| in | <i>message</i> | Specifies the debug output message. |

## Remarks

This output is renderer dependent.

8.1.1.15 `using LLGL::Point = typedef Gs::Vector2i`

2D point (integer)

8.1.1.16 `using LLGL::Size = typedef Gs::Vector2i`

2D size (integer)

## 8.1.2 Enumeration Type Documentation

8.1.2.1 `enum LLGL::AxisDirection` `[strong]`

Axis direction (also used for texture cube face).

### Enumerator

**XPos** X+ direction.

**XNeg** X- direction.

**YPos** Y+ direction.

**YNeg** Y- direction.

**ZPos** Z+ direction.

**ZNeg** Z- direction.

8.1.2.2 `enum LLGL::BlendArithmetic` `[strong]`

Blending arithmetic operations enumeration.

### Enumerator

**Add** Add source 1 and source 2. This is the default for all renderers.

**Subtract** Subtract source 1 from source 2.

**RevSubtract** Subtract source 2 from source 1.

**Min** Find the minimum of source 1 and source 2.

**Max** Find the maximum of source 1 and source 2.

### 8.1.2.3 enum LLGL::BlendOp [strong]

Blending operations enumeration.

Enumerator

**Zero** Data source is the color black (0, 0, 0, 0).

**One** Data source is the color white (1, 1, 1, 1).

**SrcColor** Data source is color data (RGB) from a fragment shader.

**InvSrcColor** Data source is inverted color data (1 - RGB) from a fragment shader.

**SrcAlpha** Data source is alpha data (A) from a fragment shader.

**InvSrcAlpha** Data source is inverted alpha data (1 - A) from a fragment shader.

**DestColor** Data source is color data (RGB) from a framebuffer.

**InvDestColor** Data source is inverted color data (1 - RGB) from a framebuffer.

**DestAlpha** Data source is alpha data (A) from a framebuffer.

**InvDestAlpha** Data source is inverted alpha data (1 - A) from a framebuffer.

**SrcAlphaSaturate** Data source is alpha data (A) from a fragment shader which is clamped to 1 or less.

**BlendFactor** Data source is the blend factor (RGBA) from the blend state.

See also

[BlendDescriptor::blendFactor](#)

**InvBlendFactor** Data source is the inverted blend factor (1 - RGBA) from the blend state.

See also

[BlendDescriptor::blendFactor](#)

**Src1Color** Data sources are both color data (RGB) from a fragment shader with dual-source color blending.

**InvSrc1Color** Data sources are both inverted color data (1 - RGB) from a fragment shader with dual-source color blending.

**Src1Alpha** Data sources are both alpha data (A) from a fragment shader with dual-source color blending.

**InvSrc1Alpha** Data sources are both inverted alpha data (1 - A) from a fragment shader with dual-source color blending.

### 8.1.2.4 enum LLGL::BufferCPUAccess [strong]

Hardware buffer CPU access enumeration.

See also

[RenderSystem::MapBuffer](#)

Enumerator

**ReadOnly** CPU read access only.

**WriteOnly** CPU write access only.

**ReadWrite** CPU read and write access.

### 8.1.2.5 enum LLGL::BufferType [strong]

Hardware buffer type enumeration.

#### Enumerator

- Vertex** Vertex buffer type.
- Index** Index buffer type.
- Constant** Constant buffer type (also called "Uniform Buffer Object").
- Storage** Storage buffer type (also called "Shader Storage Buffer Object" or "Read/Write Buffer").
- StreamOutput** Stream output buffer type (also called "Transform Feedback Buffer").

### 8.1.2.6 enum LLGL::ClippingRange [strong]

Clipping depth range enumeration.

#### Enumerator

- MinusOneToOne** Clipping depth is in the range [-1, 1] (default in OpenGL).
- ZeroToOne** Clipping depth is in the range [0, 1] (default in Direct3D).

### 8.1.2.7 enum LLGL::CompareOp [strong]

Compare operations enumeration.

#### Remarks

This operation is used for depth-test and stencil-test.

#### Enumerator

- Never** Comparison never passes.
- Less** Comparison passes if the source data is less than the destination data.
- Equal** Comparison passes if the source data is equal to the right-hand-side.
- LessEqual** Comparison passes if the source data is less than or equal to the right-hand-side.
- Greater** Comparison passes if the source data is greater than the right-hand-side.
- NotEqual** Comparison passes if the source data is not equal to the right-hand-side.
- GreaterEqual** Comparison passes if the source data is greater than or equal to the right-hand-side.
- Ever** Comparison always passes. (Can not be called "Always" due to conflict with X11 lib on Linux).

### 8.1.2.8 enum LLGL::CullMode [strong]

Polygon culling modes enumeration.

#### Enumerator

- Disabled** No culling.
- Front** Front face culling.
- Back** Back face culling.

#### 8.1.2.9 enum LLGL::DataType [strong]

Renderer data types enumeration.

##### Enumerator

- Int8** 8-bit signed integer (char).
- UInt8** 8-bit unsigned integer (unsigned char).
- Int16** 16-bit signed integer (short).
- UInt16** 16-bit unsigned integer (unsigned short).
- Int32** 32-bit signed integer (int).
- UInt32** 32-bit unsigned integer (unsigned int).
- Float** 32-bit floating-point (float).
- Double** 64-bit real type (double).

#### 8.1.2.10 enum LLGL::ErrorType [strong]

Rendering debugger error types enumeration.

##### Enumerator

- InvalidArgument** Error due to invalid argument (e.g. creating a graphics pipeline without a valid shader program being specified).
- InvalidState** Error due to invalid render state (e.g. rendering without a valid graphics pipeline).
- UnsupportedFeature** Error due to use of unsupported feature (e.g. drawing with hardware instancing when the renderer hardware does not support it).

#### 8.1.2.11 enum LLGL::ImageFormat [strong]

Image format used to write texture data.

##### Enumerator

- R** Single color component: Red.
- RG** Two color components: Red, Green.
- RGB** Three color components: Red, Green, Blue.
- BGR** Three color components: Blue, Green, Red.
- RGBA** Four color components: Red, Green, Blue, Alpha.
- BGRA** Four color components: Blue, Green, Red, Alpha.
- Depth** 32-bit depth component.
- DepthStencil** 24-bit depth- and 8-bit stencil component.
- CompressedRGB** Generic compressed format with three color components: Red, Green, Blue.
- CompressedRGBA** Generic compressed format with four color components: Red, Green, Blue, Alpha.

### 8.1.2.12 enum LLGL::Key [strong]

Input key codes.

#### Enumerator

- LButton** Left mouse button.
- RButton** Right mouse button.
- Cancel** Control-break processing.
- MButton** Middle mouse button (three-button mouse).
- XButton1** Windows 2000/XP: X1 mouse button.
- XButton2** Windows 2000/XP: X2 mouse button.
- Back** BACKSPACE key.
- Tab** TAB key.
- Clear** CLEAR key.
- Return** RETURN (or ENTER) key.
- Shift** SHIFT key.
- Control** CTRL key.
- Menu** ALT key.
- Pause** PAUSE key.
- Capital** CAPS LOCK key.
- Escape** Escape (ESC) key.
- Space** Space key.
- PageUp** Page up key.
- PageDown** Page down key.
- End** END key.
- Home** HOME (or POS1) key.
- Left** Left arrow key.
- Up** Up arrow key.
- Right** Right arrow key.
- Down** Down arrow key.
- Select** Select key.
- Print** Print key.
- Exe** Execute key.
- Snapshot** Snapshot key.
- Insert** Insert key.
- Delete** Delete key.
- Help** Help key.
- D0** Digit 0.
- D1** Digit 1.
- D2** Digit 2.
- D3** Digit 3.
- D4** Digit 4.
- D5** Digit 5.
- D6** Digit 6.
- D7** Digit 7.

**D8** Digit 8.

**D9** Digit 9.

**A** Letter A.

**B** Letter B.

**C** Letter C.

**D** Letter D.

**E** Letter E.

**F** Letter F.

**G** Letter G.

**H** Letter H.

**I** Letter I.

**J** Letter J.

**K** Letter K.

**L** Letter L.

**M** Letter M.

**N** Letter N.

**O** Letter O.

**P** Letter P.

**Q** Letter Q.

**R** Letter R.

**S** Letter S.

**T** Letter T.

**U** Letter U.

**V** Letter V.

**W** Letter W.

**X** Letter X.

**Y** Letter Y.

**Z** Letter Z.

**LWin** Left Windows key.

**RWin** Right Windows key.

**Apps** Application key.

**Sleep** Sleep key.

**Keypad0** Keypad 0 key.

**Keypad1** Keypad 1 key.

**Keypad2** Keypad 2 key.

**Keypad3** Keypad 3 key.

**Keypad4** Keypad 4 key.

**Keypad5** Keypad 5 key.

**Keypad6** Keypad 6 key.

**Keypad7** Keypad 7 key.

**Keypad8** Keypad 8 key.

**Keypad9** Keypad 9 key.

**KeypadMultiply** Keypad multiply '\*'.  
**KeypadPlus** Keypad plus '+'.  
**KeypadSeparator** Keypad separator.

**KeypadMinus** Keypad minus '-'.

**KeypadDecimal** Keypad decimal ',' or '.' (depends on language).

**KeypadDivide** Keypad divide '/'.

**F1** F1 function key.

**F2** F2 function key.

**F3** F3 function key.

**F4** F4 function key.

**F5** F5 function key.

**F6** F6 function key.

**F7** F7 function key.

**F8** F8 function key.

**F9** F9 function key.

**F10** F10 function key.

**F11** F11 function key.

**F12** F12 function key.

**F13** F13 function key.

**F14** F14 function key.

**F15** F15 function key.

**F16** F16 function key.

**F17** F17 function key.

**F18** F18 function key.

**F19** F19 function key.

**F20** F20 function key.

**F21** F21 function key.

**F22** F22 function key.

**F23** F23 function key.

**F24** F24 function key.

**NumLock** Num lock key.

**ScrollLock** Scroll lock key.

**LShift** Left shift key.

**RShift** Right shift key.

**LControl** Left control (CTRL) key.

**RControl** Right control (CTRL) key.

**LMenu** Left menu key.

**RMenu** Right menu key.

**BrowserBack**

**BrowserForward**

**BrowserRefresh**

**BrowserStop**

**BrowserSearch**

**BrowserFavorites**

**BrowserHome**

**VolumeMute**

**VolumeDown**

**VolumeUp**

*MediaNextTrack*  
*MediaPrevTrack*  
*MediaStop*  
*MediaPlayPause*

*OEMClear*

#### 8.1.2.13 enum LLGL::LogicOp [strong]

Logical pixel operation enumeration.

##### Remarks

These logical pixel operations are bitwise operations.

##### Note

Only supported with: OpenGL.

##### See also

[GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor::logicOp](#)  
<https://www.opengl.org/sdk/docs/man/html/glLogicOp.xhtml>

##### Enumerator

**Keep** Keep previous logical pixel operation.  
**Disabled** Logical pixel operation is disabled.  
**Clear** Resulting operation: 0.  
**Set** Resulting operation: 1.  
**Copy** Resulting operation: src.

**InvertedCopy** Resulting operation:  $\sim$ src.  
**Noop** Resulting operation: dest.  
**Invert** Resulting operation:  $\sim$ dest.  
**AND** Resulting operation: src & dest.  
**NAND** Resulting operation:  $\sim$ (src & dest)  
**OR** Resulting operation: src | dest.  
**NOR** Resulting operation:  $\sim$ (src | dest)  
**XOR** Resulting operation: src ^ dest.  
**Equiv** Resulting operation:  $\sim$ (src ^ dest)  
**ReverseAND** Resulting operation: src &  $\sim$ dest.  
**InvertedAND** Resulting operation:  $\sim$ src & dest.  
**ReverseOR** Resulting operation: src |  $\sim$ dest.  
**InvertedOR** Resulting operation:  $\sim$ src | dest.

#### 8.1.2.14 enum LLGL::OpenGLVersion [strong]

##### Enumerator

**OpenGL\_Latest** Latest available OpenGL version (on the host platform).  
**OpenGL\_1\_0** OpenGL 1.0, released in Jan, 1992.  
**OpenGL\_1\_1** OpenGL 1.1, released in Mar, 1997.  
**OpenGL\_1\_2** OpenGL 1.2, released in Mar, 1998.  
**OpenGL\_1\_3** OpenGL 1.3, released in Aug, 2001.  
**OpenGL\_1\_4** OpenGL 1.4, released in Jul, 2002.  
**OpenGL\_1\_5** OpenGL 1.5, released in Jul, 2003.  
**OpenGL\_2\_0** OpenGL 2.0, released in Sep, 2004.  
**OpenGL\_2\_1** OpenGL 2.1, released in Jul, 2006.  
**OpenGL\_3\_0** OpenGL 3.0, released in Aug, 2008 (known as "Longs Peak").  
**OpenGL\_3\_1** OpenGL 3.1, released in Mar, 2009 (known as "Longs Peak Reloaded").  
**OpenGL\_3\_2** OpenGL 3.2, released in Aug, 2009.  
**OpenGL\_3\_3** OpenGL 3.3, released in Mar, 2010.  
**OpenGL\_4\_0** OpenGL 4.0, released in Mar, 2010 (alongside with OpenGL 3.3).  
**OpenGL\_4\_1** OpenGL 4.1, released in Jul, 2010.  
**OpenGL\_4\_2** OpenGL 4.2, released in Aug, 2011.  
**OpenGL\_4\_3** OpenGL 4.3, released in Aug, 2012.  
**OpenGL\_4\_4** OpenGL 4.4, released in Jul, 2013.  
**OpenGL\_4\_5** OpenGL 4.5, released in Aug, 2014.

#### 8.1.2.15 enum LLGL::PolygonMode [strong]

Polygon filling modes enumeration.

##### Enumerator

**Fill** Draw filled polygon.  
**Wireframe** Draw triangle edges only.  
**Points** Draw vertex points only.

##### Note

Only supported with: OpenGL.

## 8.1.2.16 enum LLGL::PrimitiveTopology [strong]

Primitive topology enumeration.

See also

[GraphicsPipelineDescriptor::primitiveTopology](#)

Enumerator

**PointList** Point list.

**LineList** Line list where each line has its own two vertices.

**LineStrip** Line strip where each line after the first one begins with the previous vertex.

**LineLoop** Line loop which is similiar to line strip but the last line ends with the first vertex.

Note

Only supported with: OpenGL.

**LineListAdjacency** Adjacency line list.

**LineStripAdjacency** Adjacency line strips.

**TriangleList** Triangle list where each triangle has its own three vertices.

**TriangleStrip** Triangle strip where each triangle after the first one begins with the previous vertex.

**TriangleFan** Triangle fan where each triangle uses the first vertex, the previous vertex, and a new vertex.

Note

Only supported with: OpenGL.

**TriangleListAdjacency** Adjacency triangle list.

**TriangleStripAdjacency** Adjacency triangle strips.

**Patches1** Patches with 1 control point.

**Patches2** Patches with 2 control points.

**Patches3** Patches with 3 control points.

**Patches4** Patches with 4 control points.

**Patches5** Patches with 5 control points.

**Patches6** Patches with 6 control points.

**Patches7** Patches with 7 control points.

**Patches8** Patches with 8 control points.

**Patches9** Patches with 9 control points.

**Patches10** Patches with 10 control points.

**Patches11** Patches with 11 control points.

**Patches12** Patches with 12 control points.

**Patches13** Patches with 13 control points.

**Patches14** Patches with 14 control points.

**Patches15** Patches with 15 control points.

**Patches16** Patches with 16 control points.

**Patches17** Patches with 17 control points.

**Patches18** Patches with 18 control points.

**Patches19** Patches with 19 control points.

**Patches20** Patches with 20 control points.

**Patches21** Patches with 21 control points.

**Patches22** Patches with 22 control points.

**Patches23** Patches with 23 control points.

**Patches24** Patches with 24 control points.

**Patches25** Patches with 25 control points.

**Patches26** Patches with 26 control points.

**Patches27** Patches with 27 control points.

**Patches28** Patches with 28 control points.

**Patches29** Patches with 29 control points.

**Patches30** Patches with 30 control points.

**Patches31** Patches with 31 control points.

**Patches32** Patches with 32 control points.

#### 8.1.2.17 enum LLGL::PrimitiveType [strong]

Primitive type enumeration.

##### Remarks

These entries are generic terms of a primitive topology.

##### See also

[CommandBuffer::BeginStreamOutput](#)

##### Enumerator

**Points** Generic term for all point primitives.

##### Remarks

This term refers to the following primitive topologies: [PrimitiveTopology::PointList](#).

**Lines** Generic term for all line primitives.

##### Remarks

This term refers to the following primitive topologies: [PrimitiveTopology::LineList](#), [PrimitiveTopology::LineStrip](#), [PrimitiveTopology::LineLoop](#), [PrimitiveTopology::LineListAdjacency](#), and [PrimitiveTopology::LineStripAdjacency](#).

**Triangles** Generic term for all triangle primitives.

##### Remarks

This term refers to the following primitive topologies: [PrimitiveTopology::TriangleList](#), [PrimitiveTopology::TriangleStrip](#), [PrimitiveTopology::TriangleFan](#), [PrimitiveTopology::TriangleListAdjacency](#), and [PrimitiveTopology::TriangleStripAdjacency](#).

## 8.1.2.18 enum LLGL::QueryType [strong]

[Query](#) type enumeration.

Enumerator

**SamplesPassed** Number of samples that passed the depth test. This can be used as render condition.

**AnySamplesPassed** Non-zero if any samples passed the depth test. This can be used as render condition.

**AnySamplesPassedConservative** Non-zero if any samples passed the depth test within a conservative rasterization. This can be used as render condition.

**PrimitivesGenerated** Number of generated primitives which are send to the rasterizer (either emitted from the geometry or vertex shader).

**TimeElapsed** Elapsed time (in nanoseconds) between the begin- and end query command.

**StreamOutPrimitivesWritten** Number of vertices that have been written into a stream output (also called "Transform Feedback").

**StreamOutOverflow** Non-zero if any of the streaming output buffers (also called "Transform Feedback Buffers") has an overflow.

**VerticesSubmitted** Number of vertices submitted to the input-assembly.

**PrimitivesSubmitted** Number of primitives submitted to the input-assembly.

**VertexShaderInvocations** Number of vertex shader invocations.

**TessControlShaderInvocations** Number of tessellation-control shader invocations.

**TessEvaluationShaderInvocations** Number of tessellation-evaluation shader invocations.

**GeometryShaderInvocations** Number of geometry shader invocations.

**FragmentShaderInvocations** Number of fragment shader invocations.

**ComputeShaderInvocations** Number of compute shader invocations.

**GeometryPrimitivesGenerated** Number of primitives generated by the geometry shader.

**ClippingInputPrimitives** Number of primitives that reached the primitive clipping stage.

**ClippingOutputPrimitives** Number of primitives that passed the primitive clipping stage.

## 8.1.2.19 enum LLGL::RenderConditionMode [strong]

Render condition mode enumeration.

Remarks

The condition is determined by the type of the [Query](#) object.

See also

RenderContext::BeginRenderCondition

Enumerator

**Wait** Wait until the occlusion query result is available, before conditional rendering begins.

**NoWait** Do not wait until the occlusion query result is available, before conditional rendering begins.

**ByRegionWait** Similar to Wait, but the renderer may discard the results of commands for any framebuffer region that did not contribute to the occlusion query.

**ByRegionNoWait** Similar to NoWait, but the renderer may discard the results of commands for any framebuffer region that did not contribute to the occlusion query.

**WaitInverted** Same as Wait, but the condition is inverted.

**NoWaitInverted** Same as NoWait, but the condition is inverted.

**ByRegionWaitInverted** Same as ByRegionWait, but the condition is inverted.

**ByRegionNoWaitInverted** Same as ByRegionNoWait, but the condition is inverted.

8.1.2.20 enum **LLGL::ScreenOrigin** [strong]

Screen coordinate system origin enumeration.

Enumerator

**LowerLeft** Screen origin is in the lower-left (default in OpenGL).

**UpperLeft** Screen origin is in the upper-left (default in Direct3D).

8.1.2.21 enum **LLGL::ShaderType** [strong]

Shader type enumeration.

Enumerator

**Vertex** Vertex shader type.

**TessControl** Tessellation control shader type (also "Hull Shader").

**TessEvaluation** Tessellation evaluation shader type (also "Domain Shader").

**Geometry** Geometry shader type.

**Fragment** Fragment shader type (also "Pixel Shader").

**Compute** Compute shader type.

8.1.2.22 enum **LLGL::ShadingLanguage** [strong]

Shading language version enumeration.

Remarks

These enumeration entries can be casted to an integer to get the respective version number. GLSL versions range from 110 (v.1.10) to 450 (v.4.50), and HLSL version range from 100200 (v.2.0) to 100500 (v.5.0).

Enumerator

**Unsupported** Enumeration entry if shaders are not supported.

**GLSL\_110** GLSL 1.10 (since OpenGL 2.0).

**GLSL\_120** GLSL 1.20 (since OpenGL 2.1).

**GLSL\_130** GLSL 1.30 (since OpenGL 3.0).

**GLSL\_140** GLSL 1.40 (since OpenGL 3.1).

**GLSL\_150** GLSL 1.50 (since OpenGL 3.2).

**GLSL\_330** GLSL 3.30 (since OpenGL 3.3).

**GLSL\_400** GLSL 4.00 (since OpenGL 4.0).

**GLSL\_410** GLSL 4.10 (since OpenGL 4.1).

**GLSL\_420** GLSL 4.20 (since OpenGL 4.2).

**GLSL\_430** GLSL 4.30 (since OpenGL 4.3).

**GLSL\_440** GLSL 4.40 (since OpenGL 4.4).

**GLSL\_450** GLSL 4.50 (since OpenGL 4.5).

**HLSL\_2\_0** HLSL 2.0 (since Direct3D 9).

**HLSL\_2\_0a** HLSL 2.0a (since Direct3D 9a).

**HLSL\_2\_0b** HLSL 2.0b (since Direct3D 9b).

**HLSL\_3\_0** HLSL 3.0 (since Direct3D 9c).

**HLSL\_4\_0** HLSL 4.0 (since Direct3D 10).

**HLSL\_4\_1** HLSL 4.1 (since Direct3D 10.1).

**HLSL\_5\_0** HLSL 5.0 (since Direct3D 11).

## 8.1.2.23 enum LLGL::StencilOp [strong]

Stencil operations enumeration.

Enumerator

**Keep** Keep the existing stencil data.

**Zero** Set stencil data to 0.

**Replace** Set the stencil data to the reference value.

See also

[StencilFaceDescriptor::reference](#)

**IncClamp** Increment the stencil value by 1, and clamp the result.

**DecClamp** Decrement the stencil value by 1, and clamp the result.

**Invert** Invert the stencil data.

**IncWrap** Increment the stencil value by 1, and wrap the result if necessary.

**DecWrap** Decrement the stencil value by 1, and wrap the result if necessary.

## 8.1.2.24 enum LLGL::StorageBufferType [strong]

Storage buffer type enumeration.

Note

Only supported with: Direct3D 11, Direct3D 12.

Enumerator

**Buffer** Typed buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**StructuredBuffer** Structured buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**ByteAddressBuffer** Byte-address buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**RWBuffer** Typed read/write buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**RWStructuredBuffer** Structured read/write buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**RWByteAddressBuffer** Byte-address read/write buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**AppendStructuredBuffer** Append structured buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

**ConsumeStructuredBuffer** Consume structured buffer.

Note

Only supported with: Direct3D 11, Direct3D 12.

8.1.2.25 enum **LLGL::SwapChainMode** [strong]

Swap chain mode enumeration.

Enumerator

**SingleBuffering** Single buffering. This is almost no longer used.

**DoubleBuffering** Double buffering. This is the default for most renderers.

**TripleBuffering** Triple buffering. Triple buffering can only be used for Direct3D renderers.

8.1.2.26 enum **LLGL::TextureFilter** [strong]

[Texture](#) sampling filter enumeration.

Enumerator

**Nearest** Take the nearest sample.

**Linear** Interpolate between two samples.

8.1.2.27 enum **LLGL::TextureFormat** [strong]

Hardware texture format enumeration.

Note

All integral 32-bit formats are un-normalized!

Enumerator

**Unknown** Unknown texture format.

**DepthComponent** Base format: depth component.

**DepthStencil** Base format: depth- and stencil components.

**R** Base format: red component.

**RG** Base format: red and green components.

**RGB** Base format: red, green, and blue components.

Note

Only supported with: OpenGL.

**RGBA** Base format: red, green, blue, and alpha components.

**R8** Sized format: red 8-bit normalized unsigned integer component.

**R8Sgn** Sized format: red 8-bit normalized signed integer component.

**R16** Sized format: red 16-bit normalized unsigned integer component.

**R16Sgn** Sized format: red 16-bit normalized signed integer component.

**R16Float** Sized format: red 16-bit floating point component.

**R32UInt** Sized format: red 32-bit un-normalized unsigned integer component.

**R32SInt** Sized format: red 32-bit un-normalized signed integer component.

**R32Float** Sized format: red 32-bit floating point component.

**RG8** Sized format: red, green 8-bit normalized unsigned integer components.

**RG8Sgn** Sized format: red, green 8-bit normalized signed integer components.

**RG16** Sized format: red, green 16-bit normalized unsigned integer components.

**RG16Sgn** Sized format: red, green 16-bit normalized signed integer components.

**RG16Float** Sized format: red, green 16-bit floating point components.

**RG32UInt** Sized format: red, green 32-bit un-normalized unsigned integer components.

**RG32SInt** Sized format: red, green 32-bit un-normalized signed integer components.

**RG32Float** Sized format: red, green 32-bit floating point components.

**RGB8** Sized format: red, green, blue 8-bit normalized unsigned integer components.

Note

Only supported with: OpenGL.

**RGB8Sgn** Sized format: red, green, blue 8-bit normalized signed integer components.

Note

Only supported with: OpenGL.

**RGB16** Sized format: red, green, blue 16-bit normalized unsigned integer components.

Note

Only supported with: OpenGL.

**RGB16Sgn** Sized format: red, green, blue 16-bit normalized signed integer components.

Note

Only supported with: OpenGL.

**RGB16Float** Sized format: red, green, blue 16-bit floating point components.

Note

Only supported with: OpenGL.

**RGB32UInt** Sized format: red, green, blue 32-bit un-normalized unsigned integer components.

**RGB32SInt** Sized format: red, green, blue 32-bit un-normalized signed integer components.

**RGB32Float** Sized format: red, green, blue 32-bit floating point components.

**RGBA8** Sized format: red, green, blue, alpha 8-bit normalized unsigned integer components.

**RGBA8Sgn** Sized format: red, green, blue, alpha 8-bit normalized signed integer components.

**RGBA16** Sized format: red, green, blue, alpha 16-bit normalized unsigned integer components.

**RGBA16Sgn** Sized format: red, green, blue, alpha 16-bit normalized signed integer components.

**RGBA16Float** Sized format: red, green, blue, alpha 16-bit floating point components.

**RGBA32UInt** Sized format: red, green, blue, alpha 32-bit un-normalized unsigned integer components.

**RGBA32SInt** Sized format: red, green, blue, alpha 32-bit un-normalized signed integer components.

**RGBA32Float** Sized format: red, green, blue, alpha 32-bit floating point components.

**RGB\_DXT1** Compressed format: RGB S3TC DXT1.

**RGBA\_DXT1** Compressed format: RGBA S3TC DXT1.

**RGBA\_DXT3** Compressed format: RGBA S3TC DXT3.

**RGBA\_DXT5** Compressed format: RGBA S3TC DXT5.

#### 8.1.2.28 enum LLGL::TextureType [strong]

[Texture](#) type enumeration.

##### Enumerator

- Texture1D** 1-Dimensional texture.
- Texture2D** 2-Dimensional texture.
- Texture3D** 3-Dimensional texture.
- TextureCube** Cube texture.
- Texture1DArray** 1-Dimensional array texture.
- Texture2DArray** 2-Dimensional array texture.
- TextureCubeArray** Cube array texture.
- Texture2DMS** 2-Dimensional multi-sample texture.
- Texture2DMSArray** 2-Dimensional multi-sample array texture.

#### 8.1.2.29 enum LLGL::TextureWrap [strong]

[Texture](#) coordinate wrap enumeration.

##### Enumerator

- Repeat** Repeat texture coordinates within the interval [0, 1).
- Mirror** Flip texture coordinates at ever integer junction.
- Clamp** Clamp texture coordinates to the interval [0, 1].
- Border** Clamp texture coordinates to their border.
- MirrorOnce** Takes the absolute value of the texture coordinates and then clamps it to the interval [0, 1], i.e. mirror around 0.

#### 8.1.2.30 enum LLGL::UniformType [strong]

[Shader](#) uniform type enumeration.

##### Enumerator

- Float** float uniform.
- Float2** float2/ vec2 uniform.
- Float3** float3/ vec3 uniform.
- Float4** float4/ vec4 uniform.
- Double** double uniform.
- Double2** double2/ dvec2 uniform.
- Double3** double3/ dvec3 uniform.
- Double4** double4/ dvec4 uniform.
- Int** int uniform.
- Int2** int2/ ivec2 uniform.
- Int3** int3/ ivec3 uniform.

**Int4** int4/ ivec4 uniform.

**Float2x2** float2x2/ mat2 uniform.

**Float3x3** float3x3/ mat3 uniform.

**Float4x4** float4x4/ mat4 uniform.

**Double2x2** double2x2/ dmat2 uniform.

**Double3x3** double3x3/ dmat3 uniform.

**Double4x4** double4x4/ dmat4 uniform.

**Sampler1D** sampler1D uniform.

**Sampler2D** sampler2D uniform.

**Sampler3D** sampler3D uniform.

**SamplerCube** samplerCube uniform.

#### 8.1.2.31 enum LLGL::VectorType [strong]

Renderer vector types enumeration.

Enumerator

**Float** 1-Dimensional single precision floating-point vector (float in GLSL, float in HLSL).

**Float2** 2-Dimensional single precision floating-point vector (vec2 in GLSL, float2 in HLSL).

**Float3** 3-Dimensional single precision floating-point vector (vec3 in GLSL, float3 in HLSL).

**Float4** 4-Dimensional single precision floating-point vector (vec4 in GLSL, float4 in HLSL).

**Double** 1-Dimensional double precision floating-point vector (double in GLSL, double in HLSL).

**Double2** 2-Dimensional double precision floating-point vector (dvec2 in GLSL, double2 in HLSL).

**Double3** 3-Dimensional double precision floating-point vector (dvec3 in GLSL, double3 in HLSL).

**Double4** 4-Dimensional double precision floating-point vector (dvec4 in GLSL, double4 in HLSL).

**Int** 1-Dimensional signed integer vector (int in GLSL, int in HLSL).

**Int2** 2-Dimensional signed integer vector (ivec2 in GLSL, int2 in HLSL).

**Int3** 3-Dimensional signed integer vector (ivec3 in GLSL, int3 in HLSL).

**Int4** 4-Dimensional signed integer vector (ivec4 in GLSL, int4 in HLSL).

**UInt** 1-Dimensional unsigned integer vector (uint in GLSL, uint in HLSL).

**UInt2** 2-Dimensional unsigned integer vector (uvec2 in GLSL, uint2 in HLSL).

**UInt3** 3-Dimensional unsigned integer vector (uvec3 in GLSL, uint3 in HLSL).

**UInt4** 4-Dimensional unsigned integer vector (uvec4 in GLSL, uint4 in HLSL).

#### 8.1.2.32 enum LLGL::WarningType [strong]

Enumerator

**ImproperArgument** Warning due to improper argument (e.g. generating 4 vertices while having triangle list as primitive topology).

**ImproperState** Warning due to improper state (e.g. rendering while viewport is not visible).

**PointlessOperation** Warning due to a operation without any effect (e.g. drawing with 0 vertices).

### 8.1.3 Function Documentation

#### 8.1.3.1 LLGL\_EXPORT bool LLGL::CompareSWO ( const VideoDisplayMode & lhs, const VideoDisplayMode & rhs )

Compares the two video display modes in a strict-weak-order (SWO) fashion.

#### 8.1.3.2 LLGL\_EXPORT ByteBuffer LLGL::ConvertImageBuffer ( ImageFormat srcFormat, DataType srcDataType, const void \* srcBuffer, std::size\_t srcBufferSize, ImageFormat dstFormat, DataType dstDataType, std::size\_t threadCount = 0 )

Converts the image format and data type of the source image (only uncompressed color formats).

##### Parameters

|    |                      |  |
|----|----------------------|--|
| in | <i>srcFormat</i>     | Specifies the source image format.   |
| in | <i>srcDataType</i>   | Specifies the source data type.  |
| in | <i>srcBuffer</i>     | Pointer to the source image buffer which is to be converted.   |
| in | <i>srcBufferSize</i> | Specifies the size (in bytes) of the source image buffer.  |
| in | <i>dstFormat</i>     | Specifies the destination image format.  |
| in | <i>dstDataType</i>   | Specifies the destination data type.   |
| in | <i>threadCount</i>   | Specifies the number of threads to use for conversion. If this is less than 2, no multi-threading is used. If this is 'maxThreadCount', the maximal count of threads the system supports will be used (e.g. 4 on a quad-core processor). By default 0. |

##### Returns

Byte buffer with the converted image data or null if no conversion is necessary. This can be casted to the respective target data type (e.g. "unsigned char", "int", "float" etc.).

##### Remarks

Compressed images and depth-stencil images can not be converted.

##### Exceptions

|                              |   |
|------------------------------|---|
| <i>std::invalid_argument</i> | If a compressed image format is specified either as source or destination, if a depth-stencil format is specified either as source or destination, if the source buffer size is not a multiple of the source data type size times the image format size, or if 'srcBuffer' is a null pointer. |
|------------------------------|---|

##### See also

maxThreadCount  
[ByteBuffer](#)  
[DataTypeSize](#)

#### 8.1.3.3 LLGL\_EXPORT unsigned int LLGL::DataTypeSize ( const DataType dataType )

Returns the size (in bytes) of the specified data type.

#### 8.1.3.4 LLGL\_EXPORT unsigned int LLGL::ImageFormatSize ( const ImageFormat *imageFormat* )

Returns the size (in number of components) of the specified image format.

##### Parameters

|    |                    |                             |
|----|--------------------|-----------------------------|
| in | <i>imageFormat</i> | Specifies the image format. |
|----|--------------------|-----------------------------|

##### Returns

Number of components of the specified image format, or 0 if 'imageFormat' specifies a compressed color format.

##### See also

[IsCompressedFormat\(const ImageFormat\)](#)

#### 8.1.3.5 LLGL\_EXPORT bool LLGL::IsArrayTexture ( const TextureType *type* )

Returns true if the specified texture type is an array texture.

##### Returns

True if 'type' is . either [TextureType::Texture1DArray](#), [TextureType::Texture2DArray](#), [TextureType::Texture↔CubeArray](#), or [TextureType::Texture2DMSArray](#).

#### 8.1.3.6 LLGL\_EXPORT bool LLGL::IsCompressedFormat ( const ImageFormat *format* )

Returns true if the specified color format is a compressed format, i.e. either [ImageFormat::CompressedRGB](#), or [ImageFormat::CompressedRGBA](#).

##### See also

[ImageFormat](#)

#### 8.1.3.7 LLGL\_EXPORT bool LLGL::IsCompressedFormat ( const TextureFormat *format* )

Returns true if the specified texture format is a compressed format, i.e. either [TextureFormat::RGB\\_DXT1](#), [Texture↔Format::RGBA\\_DXT1](#), [TextureFormat::RGBA\\_DXT3](#), or [TextureFormat::RGBA\\_DXT5](#).

##### See also

[TextureFormat](#)

#### 8.1.3.8 LLGL\_EXPORT bool LLGL::IsDepthStencilFormat ( const ImageFormat *format* )

Returns true if the specified color format is a depth-stencil format, i.e. either [ImageFormat::Depth](#) or [ImageFormat::DepthStencil](#).

#### 8.1.3.9 LLGL\_EXPORT bool LLGL::IsMultiSampleTexture ( const TextureType *type* )

Returns true if the specified texture type is a multi-sample texture.

##### Returns

True if 'type' is either [TextureType::Texture2DMS](#), or [TextureType::Texture2DMSArray](#).

#### 8.1.3.10 template<typename T> T LLGL::MaxColorValue ( ) [inline]

Returns the maximal color value for the data type T. By default 1.

#### 8.1.3.11 template<> bool LLGL::MaxColorValue< bool > ( ) [inline]

Specialized version. For booleans, the return value is true.

#### 8.1.3.12 template<> unsigned char LLGL::MaxColorValue< unsigned char > ( ) [inline]

Specialized version. For unsigned 8-bit integers, the return value is 255.

#### 8.1.3.13 LLGL\_EXPORT unsigned int LLGL::NumMipLevels ( unsigned int *width*, unsigned int *height* = 1, unsigned int *depth* = 1 )

Returns the number of MIP-map levels for a texture with the specified size.

##### Parameters

|    |               |  |
|----|---------------|--|
| in | <i>width</i>  | Specifies the texture width.   |
| in | <i>height</i> | Specifies the texture height or number of layers for 1D array textures. By default 1 (if 1D textures are used).      |
| in | <i>depth</i>  | Specifies the texture depth or number of layers for 2D array textures. By default 1 (if 1D or 2D textures are used). |

##### Remarks

The height and depth are optional parameters, so this function can be easily used for 1D, 2D, and 3D textures.

##### Returns

$1 + \text{floor}(\log_2(\max\{x, y, z\}))$ .

- 8.1.3.14 **LLGL\_EXPORT** bool LLGL::operator!= ( const StreamOutputAttribute & *lhs*, const StreamOutputAttribute & *rhs* )
- 8.1.3.15 **LLGL\_EXPORT** bool LLGL::operator!= ( const VertexAttribute & *lhs*, const VertexAttribute & *rhs* )
- 8.1.3.16 **LLGL\_EXPORT** bool LLGL::operator!= ( const VsyncDescriptor & *lhs*, const VsyncDescriptor & *rhs* )
- 8.1.3.17 **LLGL\_EXPORT** bool LLGL::operator!= ( const VideoModeDescriptor & *lhs*, const VideoModeDescriptor & *rhs* )
- 8.1.3.18 template<typename T, std::size\_t N> bool LLGL::operator!= ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.19 template<typename T, std::size\_t N> Color<T,N> LLGL::operator\* ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.20 template<typename T, std::size\_t N> Color<T,N> LLGL::operator\* ( const Color< T, N > & *lhs*, const T & *rhs* )
- 8.1.3.21 template<typename T, std::size\_t N> Color<T,N> LLGL::operator\* ( const T & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.22 template<typename T, std::size\_t N> Color<T,N> LLGL::operator+ ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.23 template<typename T, std::size\_t N> Color<T,N> LLGL::operator- ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.24 template<typename T, std::size\_t N> Color<T,N> LLGL::operator/ ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.25 template<typename T, std::size\_t N> Color<T,N> LLGL::operator/ ( const Color< T, N > & *lhs*, const T & *rhs* )
- 8.1.3.26 **LLGL\_EXPORT** bool LLGL::operator== ( const VideoDisplayMode & *lhs*, const VideoDisplayMode & *rhs* )
- 8.1.3.27 **LLGL\_EXPORT** bool LLGL::operator== ( const StreamOutputAttribute & *lhs*, const StreamOutputAttribute & *rhs* )
- 8.1.3.28 **LLGL\_EXPORT** bool LLGL::operator== ( const VertexAttribute & *lhs*, const VertexAttribute & *rhs* )
- 8.1.3.29 **LLGL\_EXPORT** bool LLGL::operator== ( const VsyncDescriptor & *lhs*, const VsyncDescriptor & *rhs* )
- 8.1.3.30 **LLGL\_EXPORT** bool LLGL::operator== ( const VideoModeDescriptor & *lhs*, const VideoModeDescriptor & *rhs* )
- 8.1.3.31 template<typename T, std::size\_t N> bool LLGL::operator== ( const Color< T, N > & *lhs*, const Color< T, N > & *rhs* )
- 8.1.3.32 **LLGL\_EXPORT** void LLGL::VectorTypeFormat ( const VectorType *vectorType*, DataType & *dataType*, unsigned int & *components* )

Retrieves the format of the specified vector type.

## Parameters

|     |                   |   |
|-----|-------------------|---|
| in  | <i>vectorType</i> | Specifies the vector type whose format is to be retrieved.                    |
| out | <i>dataType</i>   | Specifies the output parameter for the resulting data type.                   |
| out | <i>components</i> | Specifies the output parameter for the resulting number of vector components. |

8.1.3.33 **LLGL\_EXPORT** unsigned int LLGL::VectorTypeSize ( const VectorType *vectorType* )

Returns the size (in bytes) of the specified vector type.

## 8.2 LLGL::Desktop Namespace Reference

### Functions

- [LLGL\\_EXPORT](#) Size [GetResolution](#) ()  
*Returns the desktop resolution.*
- [LLGL\\_EXPORT](#) int [GetColorDepth](#) ()  
*Returns the desktop color depth (bits per pixel).*
- [LLGL\\_EXPORT](#) bool [SetVideoMode](#) (const [VideoModeDescriptor](#) &videoMode)  
*Sets the new specified video mode for the desktop (resolution and fullscreen mode).*
- [LLGL\\_EXPORT](#) bool [ResetVideoMode](#) ()  
*Restes the standard video mode for the desktop.*

#### 8.2.1 Function Documentation

8.2.1.1 **LLGL\_EXPORT** int LLGL::Desktop::GetColorDepth ( )

Returns the desktop color depth (bits per pixel).

8.2.1.2 **LLGL\_EXPORT** Size LLGL::Desktop::GetResolution ( )

Returns the desktop resolution.

8.2.1.3 **LLGL\_EXPORT** bool LLGL::Desktop::ResetVideoMode ( )

Restes the standard video mode for the desktop.

8.2.1.4 **LLGL\_EXPORT** bool LLGL::Desktop::SetVideoMode ( const VideoModeDescriptor & *videoMode* )

Sets the new specified video mode for the desktop (resolution and fullscreen mode).

## 8.3 LLGL::Log Namespace Reference

### Functions

- **LLGL\_EXPORT** void [SetStdOut](#) (std::ostream &stream)  
*Sets the standard output stream. By default std::cout.*
- **LLGL\_EXPORT** void [SetStdErr](#) (std::ostream &stream)  
*Sets the standard output stream for error and warning messages. By default std::cerr.*
- **LLGL\_EXPORT** std::ostream & [StdOut](#) ()  
*Returns the standard output stream.*
- **LLGL\_EXPORT** std::ostream & [StdErr](#) ()  
*Returns the standard output stream for error and warning messages.*

### 8.3.1 Function Documentation

#### 8.3.1.1 **LLGL\_EXPORT** void LLGL::Log::SetStdErr ( std::ostream & *stream* )

Sets the standard output stream for error and warning messages. By default std::cerr.

#### 8.3.1.2 **LLGL\_EXPORT** void LLGL::Log::SetStdOut ( std::ostream & *stream* )

Sets the standard output stream. By default std::cout.

#### 8.3.1.3 **LLGL\_EXPORT** std::ostream& LLGL::Log::StdErr ( )

Returns the standard output stream for error and warning messages.

#### 8.3.1.4 **LLGL\_EXPORT** std::ostream& LLGL::Log::StdOut ( )

Returns the standard output stream.

## 8.4 LLGL::Version Namespace Reference

### Functions

- **LLGL\_EXPORT** unsigned int [GetMajor](#) ()  
*Returns the major **LLGL** version (e.g. 1 stands for "1.00").*
- **LLGL\_EXPORT** unsigned int [GetMinor](#) ()  
*Returns the minor **LLGL** version (e.g. 1 stands for "0.01"). Must be less than 100.*
- **LLGL\_EXPORT** unsigned int [GetRevision](#) ()  
*Returns the revision version number. Must be less than 100.*
- **LLGL\_EXPORT** std::string [GetStatus](#) ()  
*Returns the **LLGL** version status (either "Alpha", "Beta", or empty).*
- **LLGL\_EXPORT** unsigned int [GetID](#) ()  
*Returns the full **LLGL** version as an ID number (e.g. 200317 stands for "2.03 (Rev. 17)").*
- **LLGL\_EXPORT** std::string [GetString](#) ()  
*Returns the full **LLGL** version as a string (e.g. "0.01 Beta (Rev. 1)").*

### 8.4.1 Function Documentation

#### 8.4.1.1 `LLGL_EXPORT unsigned int LLGL::Version::GetID ( )`

Returns the full [LLGL](#) version as an ID number (e.g. 200317 stands for "2.03 (Rev. 17)").

#### 8.4.1.2 `LLGL_EXPORT unsigned int LLGL::Version::GetMajor ( )`

Returns the major [LLGL](#) version (e.g. 1 stands for "1.00").

#### 8.4.1.3 `LLGL_EXPORT unsigned int LLGL::Version::GetMinor ( )`

Returns the minor [LLGL](#) version (e.g. 1 stands for "0.01"). Must be less than 100.

#### 8.4.1.4 `LLGL_EXPORT unsigned int LLGL::Version::GetRevision ( )`

Returns the revision version number. Must be less than 100.

#### 8.4.1.5 `LLGL_EXPORT std::string LLGL::Version::GetStatus ( )`

Returns the [LLGL](#) version status (either "Alpha", "Beta", or empty).

#### 8.4.1.6 `LLGL_EXPORT std::string LLGL::Version::GetString ( )`

Returns the full [LLGL](#) version as a string (e.g. "0.01 Beta (Rev. 1)").

## Chapter 9

# Class Documentation

### 9.1 LLGL::BlendDescriptor Struct Reference

Blending state descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

#### Public Attributes

- bool `blendEnabled` = false  
*Specifies whether blending is enabled or disabled. This applies to all blending targets.*
- `ColorRGBAf` `blendFactor` { 0.0f, 0.0f, 0.0f, 0.0f }  
*Specifies the blending color factor. By default (0, 0, 0, 0).*
- `std::vector< BlendTargetDescriptor >` `targets`  
*Render-target blend states. A maximum of 8 targets is supported. Further targets will be ignored.*

#### 9.1.1 Detailed Description

Blending state descriptor structure.

#### 9.1.2 Member Data Documentation

##### 9.1.2.1 bool LLGL::BlendDescriptor::blendEnabled = false

Specifies whether blending is enabled or disabled. This applies to all blending targets.

### 9.1.2.2 ColorRGBAf LLGL::BlendDescriptor::blendFactor { 0.0f, 0.0f, 0.0f, 0.0f }

Specifies the blending color factor. By default (0, 0, 0, 0).

#### Remarks

This is only used if any blending operations of any blending target is either [BlendOp::BlendFactor](#) or [BlendOp::InvBlendFactor](#).

#### See also

[BlendOp::BlendFactor](#)  
[BlendOp::InvBlendFactor](#)

### 9.1.2.3 std::vector<BlendTargetDescriptor> LLGL::BlendDescriptor::targets

Render-target blend states. A maximum of 8 targets is supported. Further targets will be ignored.

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.2 LLGL::BlendTargetDescriptor Struct Reference

Blend target state descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- [BlendOp srcColor](#) = [BlendOp::SrcAlpha](#)  
*Source color blending operation. By default [BlendOp::SrcAlpha](#).*
- [BlendOp destColor](#) = [BlendOp::InvSrcAlpha](#)  
*Destination color blending operation. By default [BlendOp::InvSrcAlpha](#).*
- [BlendArithmetic colorArithmetic](#) = [BlendArithmetic::Add](#)  
*Color blending arithmetic. By default [BlendArithmetic::Add](#).*
- [BlendOp srcAlpha](#) = [BlendOp::SrcAlpha](#)  
*Source alpha blending operation. By default [BlendOp::SrcAlpha](#).*
- [BlendOp destAlpha](#) = [BlendOp::InvSrcAlpha](#)  
*Destination alpha blending operation. By default [BlendOp::InvSrcAlpha](#).*
- [BlendArithmetic alphaArithmetic](#) = [BlendArithmetic::Add](#)  
*Alpha blending arithmetic. By default [BlendArithmetic::Add](#).*
- [ColorRGBAb colorMask](#)  
*Specifies which color components are enabled for writing. By default (true, true, true, true).*

### 9.2.1 Detailed Description

Blend target state descriptor structure.

### 9.2.2 Member Data Documentation

#### 9.2.2.1 BlendArithmetic LLGL::BlendTargetDescriptor::alphaArithmetic = BlendArithmetic::Add

Alpha blending arithmetic. By default [BlendArithmetic::Add](#).

#### 9.2.2.2 BlendArithmetic LLGL::BlendTargetDescriptor::colorArithmetic = BlendArithmetic::Add

Color blending arithmetic. By default [BlendArithmetic::Add](#).

#### 9.2.2.3 ColorRGBAB LLGL::BlendTargetDescriptor::colorMask

Specifies which color components are enabled for writing. By default (true, true, true, true).

#### 9.2.2.4 BlendOp LLGL::BlendTargetDescriptor::destAlpha = BlendOp::InvSrcAlpha

Destination alpha blending operation. By default [BlendOp::InvSrcAlpha](#).

#### 9.2.2.5 BlendOp LLGL::BlendTargetDescriptor::destColor = BlendOp::InvSrcAlpha

Destination color blending operation. By default [BlendOp::InvSrcAlpha](#).

#### 9.2.2.6 BlendOp LLGL::BlendTargetDescriptor::srcAlpha = BlendOp::SrcAlpha

Source alpha blending operation. By default [BlendOp::SrcAlpha](#).

#### 9.2.2.7 BlendOp LLGL::BlendTargetDescriptor::srcColor = BlendOp::SrcAlpha

Source color blending operation. By default [BlendOp::SrcAlpha](#).

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.3 LLGL::Buffer Class Reference

Hardware buffer interface.

```
#include <Buffer.h>
```

## Public Member Functions

- [Buffer](#) (const [Buffer](#) &)=delete
- [Buffer](#) & [operator=](#) (const [Buffer](#) &)=delete
- virtual [~Buffer](#) ()
- [BufferType](#) [GetType](#) () const

*Returns the type of this buffer.*

## Protected Member Functions

- [Buffer](#) (const [BufferType](#) type)

### 9.3.1 Detailed Description

Hardware buffer interface.

### 9.3.2 Constructor & Destructor Documentation

9.3.2.1 `LLGL::Buffer::Buffer ( const Buffer & )` [delete]

9.3.2.2 `virtual LLGL::Buffer::~~Buffer ( )` [virtual]

9.3.2.3 `LLGL::Buffer::Buffer ( const BufferType type )` [protected]

### 9.3.3 Member Function Documentation

9.3.3.1 `BufferType LLGL::Buffer::GetType ( ) const` [inline]

Returns the type of this buffer.

9.3.3.2 `Buffer& LLGL::Buffer::operator= ( const Buffer & )` [delete]

The documentation for this class was generated from the following file:

- [Buffer.h](#)

## 9.4 LLGL::BufferArray Class Reference

Array of hardware buffers interface.

```
#include <BufferArray.h>
```

## Public Member Functions

- [BufferArray](#) (const [BufferArray](#) &)=delete
- [BufferArray](#) & [operator=](#) (const [BufferArray](#) &)=delete
- virtual [~BufferArray](#) ()
- [BufferType](#) [GetType](#) () const

*Returns the type of buffers this array contains.*

## Protected Member Functions

- [BufferArray](#) (const [BufferType](#) type)

### 9.4.1 Detailed Description

Array of hardware buffers interface.

#### Remarks

This array can only contain buffers which are all from the same type, like an array of vertex buffers for instance.

### 9.4.2 Constructor & Destructor Documentation

9.4.2.1 `LLGL::BufferArray::BufferArray ( const BufferArray & )` [delete]

9.4.2.2 `virtual LLGL::BufferArray::~~BufferArray ( )` [virtual]

9.4.2.3 `LLGL::BufferArray::BufferArray ( const BufferType type )` [protected]

### 9.4.3 Member Function Documentation

9.4.3.1 `BufferType LLGL::BufferArray::GetType ( ) const` [inline]

Returns the type of buffers this array contains.

9.4.3.2 `BufferArray& LLGL::BufferArray::operator= ( const BufferArray & )` [delete]

The documentation for this class was generated from the following file:

- [BufferArray.h](#)

## 9.5 LLGL::BufferDescriptor Struct Reference

Hardware buffer descriptor structure.

```
#include <BufferFlags.h>
```

## Classes

- struct [IndexBufferDescriptor](#)
- struct [StorageBufferDescriptor](#)
- struct [VertexBufferDescriptor](#)  
*Vertex buffer descriptor structure.*

## Public Attributes

- [BufferType](#) type = [BufferType::Vertex](#)  
*Hardware buffer type. By default [BufferType::Vertex](#).*
- unsigned int [size](#) = 0  
*[Buffer](#) size (in bytes). By default 0.*
- long [flags](#) = 0  
*Specifies the buffer creation flags. By default 0.*
- [VertexBufferDescriptor](#) vertexBuffer  
*Vertex buffer type descriptor appendix.*
- [IndexBufferDescriptor](#) indexBuffer  
*Index buffer type descriptor appendix.*
- [StorageBufferDescriptor](#) storageBuffer  
*Storage buffer type descriptor appendix.*

### 9.5.1 Detailed Description

Hardware buffer descriptor structure.

### 9.5.2 Member Data Documentation

#### 9.5.2.1 long LLGL::BufferDescriptor::flags = 0

Specifies the buffer creation flags. By default 0.

#### Remarks

This can be bitwise OR combination of the entries of the [BufferFlags](#) enumeration.

#### See also

[BufferFlags](#)

#### 9.5.2.2 IndexBufferDescriptor LLGL::BufferDescriptor::indexBuffer

Index buffer type descriptor appendix.

## 9.5.2.3 unsigned int LLGL::BufferDescriptor::size = 0

[Buffer](#) size (in bytes). By default 0.

## Remarks

If the buffer type is a storage buffer (i.e. from the type [BufferType::Storage](#)), 'size' must be a multiple of 'storageBuffer.stride'.

## 9.5.2.4 StorageBufferDescriptor LLGL::BufferDescriptor::storageBuffer

Storage buffer type descriptor appendix.

## 9.5.2.5 BufferType LLGL::BufferDescriptor::type = BufferType::Vertex

Hardware buffer type. By default [BufferType::Vertex](#).

## 9.5.2.6 VertexBufferDescriptor LLGL::BufferDescriptor::vertexBuffer

Vertex buffer type descriptor appendix.

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.6 LLGL::BufferFlags Struct Reference

[Buffer](#) flags enumeration.

```
#include <BufferFlags.h>
```

### Public Types

- enum { [MapReadAccess](#) = (1 << 0), [MapWriteAccess](#) = (1 << 1), [DynamicUsage](#) = (1 << 2) }

### 9.6.1 Detailed Description

[Buffer](#) flags enumeration.

## 9.6.2 Member Enumeration Documentation

### 9.6.2.1 anonymous enum

Enumerator

**MapReadAccess** [Buffer](#) mapping with CPU read access is required.

See also

[RenderSystem::MapBuffer](#)

**MapWriteAccess** [Buffer](#) mapping with CPU write access is required.

See also

[RenderSystem::MapBuffer](#)

**DynamicUsage** Hint to the renderer that the buffer will be frequently updated from the CPU. This is useful for a constant buffer for instance, that is updated by the host program every frame.

See also

[RenderSystem::WriteBuffer](#)

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.7 LLGL::ClearFlags Struct Reference

Command buffer clear flags.

```
#include <RenderContextFlags.h>
```

### Public Types

- enum {  
[Color](#) = (1 << 0), [Depth](#) = (1 << 1), [Stencil](#) = (1 << 2), [ColorDepth](#) = (Color | Depth),  
[DepthStencil](#) = (Depth | Stencil), [All](#) = (Color | Depth | Stencil) }

### 9.7.1 Detailed Description

Command buffer clear flags.

See also

[CommandBuffer::Clear](#)

## 9.7.2 Member Enumeration Documentation

### 9.7.2.1 anonymous enum

#### Enumerator

- Color** Clears the color buffer.
- Depth** Clears the depth buffer.
- Stencil** Clears the stencil buffer.
- ColorDepth** Clears the color and depth buffers.
- DepthStencil** Clears the depth and stencil buffers.
- All** Clears the all buffers (color, depth, and stencil).

The documentation for this struct was generated from the following file:

*Specifies the number of vector components.*

### 9.8.1 Detailed Description

```
template<typename T, std::size_t N>
class LLGL::Color< T, N >
```

Base color class with N components.

#### Template Parameters

|          |  |
|----------|--|
| <i>T</i> | Specifies the data type of the vector components. This should be a primitive data type such as float, double, int etc. |
| <i>N</i> | Specifies the number of components. There are specialized templates for N = 3, and 4.                                  |

### 9.8.2 Constructor & Destructor Documentation

9.8.2.1 `template<typename T, std::size_t N> LLGL::Color< T, N >::Color ( )` `[inline]`

9.8.2.2 `template<typename T, std::size_t N> LLGL::Color< T, N >::Color ( const Color< T, N > & rhs )`  
`[inline]`

9.8.2.3 `template<typename T, std::size_t N> LLGL::Color< T, N >::Color ( Gs::UninitializeTag )` `[inline]`

### 9.8.3 Member Function Documentation

9.8.3.1 `template<typename T, std::size_t N> template<typename C > Color<C, N> LLGL::Color< T, N >::Cast ( )`  
`const` `[inline]`

Returns a type casted instance of this vector.

#### Template Parameters

|          |                                 |
|----------|---------------------------------|
| <i>C</i> | Specifies the static cast type. |
|----------|---------------------------------|

9.8.3.2 `template<typename T, std::size_t N> Color<T, N> & LLGL::Color< T, N >::operator*= ( const Color< T, N > & rhs )` `[inline]`

9.8.3.3 `template<typename T, std::size_t N> Color<T, N> & LLGL::Color< T, N >::operator*= ( const T & rhs )`  
`[inline]`

9.8.3.4 `template<typename T, std::size_t N> Color<T, N>& LLGL::Color< T, N >::operator+=( const Color< T, N > & rhs ) [inline]`

9.8.3.5 `template<typename T, std::size_t N> Color<T, N> LLGL::Color< T, N >::operator-( ) const [inline]`

9.8.3.6 `template<typename T, std::size_t N> Color<T, N>& LLGL::Color< T, N >::operator-=( const Color< T, N > & rhs ) [inline]`

9.8.3.7 `template<typename T, std::size_t N> Color<T, N>& LLGL::Color< T, N >::operator/=( const Color< T, N > & rhs ) [inline]`

9.8.3.8 `template<typename T, std::size_t N> Color<T, N>& LLGL::Color< T, N >::operator/=( const T & rhs ) [inline]`

9.8.3.9 `template<typename T, std::size_t N> T& LLGL::Color< T, N >::operator[] ( std::size_t component ) [inline]`

Returns the specified vector component.

#### Parameters

|    |                  |   |
|----|------------------|---|
| in | <i>component</i> | Specifies the vector component index. This must be in the range [0, N). |
|----|------------------|---|

9.8.3.10 `template<typename T, std::size_t N> const T& LLGL::Color< T, N >::operator[] ( std::size_t component ) const [inline]`

Returns the specified vector component.

#### Parameters

|    |                  |   |
|----|------------------|---|
| in | <i>component</i> | Specifies the vector component index. This must be in the range [0, N). |
|----|------------------|---|

9.8.3.11 `template<typename T, std::size_t N> T* LLGL::Color< T, N >::Ptr ( ) [inline]`

Returns a pointer to the first element of this vector.

9.8.3.12 `template<typename T, std::size_t N> const T* LLGL::Color< T, N >::Ptr ( ) const [inline]`

Returns a constant pointer to the first element of this vector.

## 9.8.4 Member Data Documentation

9.8.4.1 `template<typename T, std::size_t N> const std::size_t LLGL::Color< T, N >::components = N [static]`

Specifies the number of vector components.

The documentation for this class was generated from the following file:

- [Color.h](#)

## 9.9 LLGL::Color< T, 3u > Class Template Reference

RGB color class with components: r, g, and b.

```
#include <ColorRGB.h>
```

### Public Member Functions

- [Color](#) ()
- [Color](#) (const [Color](#)< T, 3 > &rhs)

- T \* [Ptr](#) ()  
*Returns a pointer to the first element of this color.*
- const T \* [Ptr](#) () const  
*Returns a constant pointer to the first element of this color.*

### Public Attributes

- T r
- T g
- T b

### Static Public Attributes

- static const std::size\_t [components](#) = 3  
*Specifies the number of color components.*

#### 9.9.1 Detailed Description

```
template<typename T>
class LLGL::Color< T, 3u >
```

RGB color class with components: r, g, and b.

#### Remarks

[Color](#) components are default initialized with their maximal value, i.e. for floating-points, the initial value is 1.0, because this its maximal color value, but for unsigned-bytes, the initial value is 255.

## 9.9.2 Constructor & Destructor Documentation

9.9.2.1 `template<typename T> LLGL::Color< T, 3u>::Color ( )` `[inline]`

9.9.2.2 `template<typename T> LLGL::Color< T, 3u>::Color ( const Color< T, 3> & rhs )` `[inline]`

9.9.2.3 `template<typename T> LLGL::Color< T, 3u>::Color ( const T & scalar )` `[inline]`, `[explicit]`

9.9.2.4 `template<typename T> LLGL::Color< T, 3u>::Color ( const T & r, const T & g, const T & b )` `[inline]`

9.9.2.5 `template<typename T> LLGL::Color< T, 3u>::Color ( Gs::UninitializeTag )` `[inline]`

## 9.9.3 Member Function Documentation

9.9.3.1 `template<typename T> template<typename C> Color<C, 3> LLGL::Color< T, 3u>::Cast ( ) const`  
`[inline]`

Returns a type casted instance of this color.

### Remarks

All color components will be scaled to the range of the new color type.

### Template Parameters

|          |                                 |
|----------|---------------------------------|
| <i>C</i> | Specifies the static cast type. |
|----------|---------------------------------|

9.9.3.2 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator*= ( const Color< T, 3> & rhs )`  
`[inline]`

9.9.3.3 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator*= ( const T & rhs )` `[inline]`

9.9.3.4 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator+= ( const Color< T, 3> & rhs )`  
`[inline]`

9.9.3.5 `template<typename T> Color<T, 3> LLGL::Color< T, 3u>::operator- ( ) const` `[inline]`

9.9.3.6 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator-= ( const Color< T, 3> & rhs )`  
`[inline]`

9.9.3.7 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator/= ( const Color< T, 3> & rhs )`  
`[inline]`

9.9.3.8 `template<typename T> Color<T, 3> & LLGL::Color< T, 3u>::operator/= ( const T & rhs )` `[inline]`

9.9.3.9 `template<typename T> T & LLGL::Color< T, 3u>::operator[] ( std::size_t component )` `[inline]`

Returns the specified color component.

## Parameters

|    |                  |   |
|----|------------------|---|
| in | <i>component</i> | Specifies the color component index. This must be 0, 1, or 2. |
|----|------------------|---|

**9.9.3.10** `template<typename T> const T& LLGL::Color< T, 3u >::operator[] ( std::size_t component ) const`  
`[inline]`

Returns the specified color component.

## Parameters

|    |                  |   |
|----|------------------|---|
| in | <i>component</i> | Specifies the color component index. This must be 0, 1, or 2. |
|----|------------------|---|

**9.9.3.11** `template<typename T> T* LLGL::Color< T, 3u >::Ptr ( )` `[inline]`

Returns a pointer to the first element of this color.

**9.9.3.12** `template<typename T> const T* LLGL::Color< T, 3u >::Ptr ( ) const` `[inline]`

Returns a constant pointer to the first element of this color.

## 9.9.4 Member Data Documentation

**9.9.4.1** `template<typename T> T LLGL::Color< T, 3u >::b`

**9.9.4.2** `template<typename T> const std::size_t LLGL::Color< T, 3u >::components = 3` `[static]`

Specifies the number of color components.

**9.9.4.3** `template<typename T> T LLGL::Color< T, 3u >::g`

**9.9.4.4** `template<typename T> T LLGL::Color< T, 3u >::r`

The documentation for this class was generated from the following file:

- [ColorRGB.h](#)

## 9.10 LLGL::Color< T, 4u > Class Template Reference

RGBA color class with components: r, g, b, and a.

```
#include <ColorRGBA.h>
```

## Public Member Functions

*Specifies the number of color components.*

### 9.10.1 Detailed Description

```
template<typename T>
class LLGL::Color< T, 4u >
```

RGBA color class with components: r, g, b, and a.

#### Remarks

`Color` components are default initialized with their maximal value, i.e. for floating-points, the initial value is 1.0, because this its maximal color value, but for unsigned-bytes, the initial value is 255.

## 9.10.2 Constructor & Destructor Documentation

9.10.2.1 `template<typename T> LLGL::Color< T, 4u >::Color ( ) [inline]`

9.10.2.2 `template<typename T> LLGL::Color< T, 4u >::Color ( const Color< T, 4 > & rhs ) [inline]`

9.10.2.3 `template<typename T> LLGL::Color< T, 4u >::Color ( const T & brightness ) [inline], [explicit]`

9.10.2.4 `template<typename T> LLGL::Color< T, 4u >::Color ( const T & r, const T & g, const T & b ) [inline]`

9.10.2.5 `template<typename T> LLGL::Color< T, 4u >::Color ( const T & r, const T & g, const T & b, const T & a ) [inline]`

9.10.2.6 `template<typename T> LLGL::Color< T, 4u >::Color ( Gs::UninitializeTag ) [inline]`

## 9.10.3 Member Function Documentation

9.10.3.1 `template<typename T> template<typename C> Color<C, 4> LLGL::Color< T, 4u >::Cast ( ) const [inline]`

Returns a type casted instance of this color.

### Remarks

All color components will be scaled to the range of the new color type.

### Template Parameters

|          |                                 |
|----------|---------------------------------|
| <i>C</i> | Specifies the static cast type. |
|----------|---------------------------------|

9.10.3.2 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator*= ( const Color< T, 4 > & rhs ) [inline]`

9.10.3.3 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator*= ( const T & rhs ) [inline]`

9.10.3.4 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator+= ( const Color< T, 4 > & rhs ) [inline]`

9.10.3.5 `template<typename T> Color<T, 4> LLGL::Color< T, 4u >::operator- ( ) const [inline]`

9.10.3.6 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator-= ( const Color< T, 4 > & rhs ) [inline]`

9.10.3.7 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator/= ( const Color< T, 4 > & rhs ) [inline]`

9.10.3.8 `template<typename T> Color<T, 4>& LLGL::Color< T, 4u >::operator=( const T & rhs ) [inline]`

9.10.3.9 `template<typename T> T& LLGL::Color< T, 4u >::operator[] ( std::size_t component ) [inline]`

Returns the specified color component.

Parameters

|    |                  |  |
|----|------------------|--|
| in | <i>component</i> | Specifies the color component index. This must be 0, 1, 2, or 3. |
|----|------------------|--|

9.10.3.10 `template<typename T> const T& LLGL::Color< T, 4u >::operator[] ( std::size_t component ) const [inline]`

Returns the specified color component.

Parameters

|    |                  |  |
|----|------------------|--|
| in | <i>component</i> | Specifies the color component index. This must be 0, 1, 2, or 3. |
|----|------------------|--|

9.10.3.11 `template<typename T> T* LLGL::Color< T, 4u >::Ptr ( ) [inline]`

Returns a pointer to the first element of this color.

9.10.3.12 `template<typename T> const T* LLGL::Color< T, 4u >::Ptr ( ) const [inline]`

Returns a constant pointer to the first element of this color.

## 9.10.4 Member Data Documentation

9.10.4.1 `template<typename T> T LLGL::Color< T, 4u >::a`

9.10.4.2 `template<typename T> T LLGL::Color< T, 4u >::b`

9.10.4.3 `template<typename T> const std::size_t LLGL::Color< T, 4u >::components = 4 [static]`

Specifies the number of color components.

9.10.4.4 `template<typename T> T LLGL::Color< T, 4u >::g`

9.10.4.5 `template<typename T> T LLGL::Color< T, 4u >::r`

The documentation for this class was generated from the following file:

- [CommandBuffer](#) ()=default

### 9.11.1 Detailed Description

Command buffer interface.

#### Remarks

This is the main interface to commit graphics and compute commands to the GPU.

### 9.11.2 Constructor & Destructor Documentation

9.11.2.1 `LLGL::CommandBuffer::CommandBuffer ( const CommandBuffer & )` `[delete]`

9.11.2.2 `virtual LLGL::CommandBuffer::~~CommandBuffer ( )` `[inline],[virtual]`

9.11.2.3 `LLGL::CommandBuffer::CommandBuffer ( )` `[protected],[default]`

### 9.11.3 Member Function Documentation

9.11.3.1 `virtual void LLGL::CommandBuffer::BeginQuery ( Query & query )` `[pure virtual]`

Begins the specified query.

#### Parameters

|                 |                           |  |
|-----------------|---------------------------|--|
| <code>in</code> | <code><i>query</i></code> | Specifies the query to begin with. This must be same query object as in the subsequent "EndQuery" function call, to end the query operation. |
|-----------------|---------------------------|--|

#### Remarks

The "BeginQuery" and "EndQuery" functions can be wrapped around any drawing and/or compute operation. This can an occlusion query for instance, which determines how many fragments have passed the depth test.

#### See also

[RenderSystem::CreateQuery](#)  
[EndQuery](#)  
[QueryResult](#)

9.11.3.2 `virtual void LLGL::CommandBuffer::BeginRenderCondition ( Query & query, const RenderConditionMode mode )` [pure virtual]

Begins conditional rendering with the specified query object.

#### Parameters

|    |              |  |
|----|--------------|--|
| in | <i>query</i> | Specifies the query object which is to be used as render condition. This must be an occlusion query, i.e. it's type must be either <a href="#">QueryType::SamplesPassed</a> , <a href="#">QueryType::AnySamplesPassed</a> , or <a href="#">QueryType::AnySamplesPassedConservative</a> . |
| in | <i>mode</i>  | Specifies the mode of the render condition.  |

#### Remarks

Here is a usage example:

```
context->BeginQuery(*occlusionQuery);
// draw bounding box ...
context->EndQuery(*occlusionQuery);
context->BeginRenderCondition(*occlusionQuery, LLGL::RenderConditionMode::Wait
);
// draw actual object ...
context->EndRenderCondition();
```

#### See also

[QueryType](#)  
[RenderConditionMode](#)

9.11.3.3 `virtual void LLGL::CommandBuffer::BeginStreamOutput ( const PrimitiveType primitiveType )` [pure virtual]

Begins with stream-output for subsequent draw calls.

#### Parameters

|    |                      |   |
|----|----------------------|---|
| in | <i>primitiveType</i> | Specifies the primitive output type of the last vertex processing shader stage (e.g. vertex- or geometry shader). |
|----|----------------------|---|

#### See also

[EndStreamOutput](#)

9.11.3.4 `virtual void LLGL::CommandBuffer::Clear ( long flags )` [pure virtual]

Clears the specified frame buffers of the active render target.

#### Parameters

|    |              |   |
|----|--------------|---|
| in | <i>flags</i> | Specifies the clear buffer flags. This can be a bitwise OR combination of the "ClearFlags" enumeration entries. |
|----|--------------|---|

**Remarks**

To specify the clear values for each buffer use the respective "SetClear..." function

**See also**

[ClearFlags](#)  
[SetClearColor](#)  
[SetClearDepth](#)  
[SetClearStencil](#)

**9.11.3.5** `virtual void LLGL::CommandBuffer::Dispatch ( unsigned int groupSizeX, unsigned int groupSizeY, unsigned int groupSizeZ )` [pure virtual]

Dispatches a compute command.

**Parameters**

|    |                   |   |
|----|-------------------|---|
| in | <i>groupSizeX</i> | Specifies the number of thread groups in the X-dimension. |
| in | <i>groupSizeY</i> | Specifies the number of thread groups in the Y-dimension. |
| in | <i>groupSizeZ</i> | Specifies the number of thread groups in the Z-dimension. |

**See also**

[SetComputePipeline](#)  
[RenderingCaps::maxNumComputeShaderWorkGroups](#)

**9.11.3.6** `virtual void LLGL::CommandBuffer::Draw ( unsigned int numVertices, unsigned int firstVertex )` [pure virtual]

Draws the specified amount of primitives from the currently set vertex buffer.

**Parameters**

|    |                    |   |
|----|--------------------|---|
| in | <i>numVertices</i> | Specifies the number of vertices to generate.                               |
| in | <i>firstVertex</i> | Specifies the zero-based offset of the first vertex from the vertex buffer. |

**9.11.3.7** `virtual void LLGL::CommandBuffer::DrawIndexed ( unsigned int numVertices, unsigned int firstIndex )` [pure virtual]

**See also**

[DrawIndexed\(unsigned int, unsigned int, int\)](#)

**9.11.3.8** `virtual void LLGL::CommandBuffer::DrawIndexed ( unsigned int numVertices, unsigned int firstIndex, int vertexOffset )` [pure virtual]

Draws the specified amount of primitives from the currently set vertex- and index buffers.

## Parameters

|    |                     |   |
|----|---------------------|---|
| in | <i>numVertices</i>  | Specifies the number of vertices to generate.   |
| in | <i>firstIndex</i>   | Specifies the zero-based offset of the first index from the index buffer.                                   |
| in | <i>vertexOffset</i> | Specifies the base vertex offset (positive or negative) which is added to each index from the index buffer. |

9.11.3.9 `virtual void LLGL::CommandBuffer::DrawIndexedInstanced ( unsigned int numVertices, unsigned int numInstances, unsigned int firstIndex ) [pure virtual]`

## See also

[DrawIndexedInstanced\(unsigned int, unsigned int, unsigned int, int, unsigned int\)](#)

9.11.3.10 `virtual void LLGL::CommandBuffer::DrawIndexedInstanced ( unsigned int numVertices, unsigned int numInstances, unsigned int firstIndex, int vertexOffset ) [pure virtual]`

## See also

[DrawIndexedInstanced\(unsigned int, unsigned int, unsigned int, int, unsigned int\)](#)

9.11.3.11 `virtual void LLGL::CommandBuffer::DrawIndexedInstanced ( unsigned int numVertices, unsigned int numInstances, unsigned int firstIndex, int vertexOffset, unsigned int instanceOffset ) [pure virtual]`

Draws the specified amount of instances of primitives from the currently set vertex- and index buffers.

## Parameters

|    |                       |   |
|----|-----------------------|---|
| in | <i>numVertices</i>    | Specifies the number of vertices to generate.   |
| in | <i>numInstances</i>   | Specifies the number of instances to generate.  |
| in | <i>firstIndex</i>     | Specifies the zero-based offset of the first index from the index buffer.                                   |
| in | <i>vertexOffset</i>   | Specifies the base vertex offset (positive or negative) which is added to each index from the index buffer. |
| in | <i>instanceOffset</i> | Specifies the zero-based instance offset which is added to each instance ID.                                |

9.11.3.12 `virtual void LLGL::CommandBuffer::DrawInstanced ( unsigned int numVertices, unsigned int firstVertex, unsigned int numInstances ) [pure virtual]`

## See also

[DrawInstanced\(unsigned int, unsigned int, unsigned int, unsigned int\)](#)

9.11.3.13 `virtual void LLGL::CommandBuffer::DrawInstanced ( unsigned int numVertices, unsigned int firstVertex, unsigned int numInstances, unsigned int instanceOffset ) [pure virtual]`

Draws the specified amount of instances of primitives from the currently set vertex buffer.

## Parameters

|    |                       |  |
|----|-----------------------|--|
| in | <i>numVertices</i>    | Specifies the number of vertices to generate.                                |
| in | <i>firstVertex</i>    | Specifies the zero-based offset of the first vertex from the vertex buffer.  |
| in | <i>numInstances</i>   | Specifies the number of instances to generate.                               |
| in | <i>instanceOffset</i> | Specifies the zero-based instance offset which is added to each instance ID. |

9.11.3.14 `virtual void LLGL::CommandBuffer::EndQuery ( Query & query ) [pure virtual]`

Ends the specified query.

## See also

[RenderSystem::CreateQuery](#)  
[BeginQuery](#)  
[QueryResult](#)

9.11.3.15 `virtual void LLGL::CommandBuffer::EndRenderCondition ( ) [pure virtual]`

Ends the current render condition.

## See also

[BeginRenderCondition](#)

9.11.3.16 `virtual void LLGL::CommandBuffer::EndStreamOutput ( ) [pure virtual]`

Ends the current stream-output.

## See also

[BeginStreamOutput](#)

9.11.3.17 `CommandBuffer& LLGL::CommandBuffer::operator= ( const CommandBuffer & ) [delete]`

9.11.3.18 `virtual bool LLGL::CommandBuffer::QueryResult ( Query & query, std::uint64_t & result ) [pure virtual]`

Queries the result of the specified [Query](#) object.

## Parameters

|     |               |   |
|-----|---------------|---|
| in  | <i>query</i>  | Specifies the <a href="#">Query</a> object whose result is to be queried. |
| out | <i>result</i> | Specifies the output result.  |

## Returns

True if the result is available, otherwise false in which case 'result' is not modified.

**9.11.3.19** `virtual void LLGL::CommandBuffer::SetClearColor ( const ColorRGBAf & color )` [pure virtual]

Sets the new value to clear the color buffer. By default black (0, 0, 0, 0).

**9.11.3.20** `virtual void LLGL::CommandBuffer::SetClearDepth ( float depth )` [pure virtual]

Sets the new value to clear the depth buffer with. By default 1.0.

**9.11.3.21** `virtual void LLGL::CommandBuffer::SetClearStencil ( int stencil )` [pure virtual]

Sets the new value to clear the stencil buffer. By default 0.

**9.11.3.22** `virtual void LLGL::CommandBuffer::SetComputePipeline ( ComputePipeline & computePipeline )` [pure virtual]

Sets the active compute pipeline state.

## Parameters

|    |                        |  |
|----|------------------------|--|
| in | <i>computePipeline</i> | Specifies the compute pipeline state to set. |
|----|------------------------|--|

## Remarks

This will set the compute shader states. A valid compute pipeline must always be set before any compute operation can be performed.

## See also

[RenderSystem::CreateComputePipeline](#)

**9.11.3.23** `virtual void LLGL::CommandBuffer::SetConstantBuffer ( Buffer & buffer, unsigned int slot, long shaderStageFlags = ShaderStageFlags::AllStages )` [pure virtual]

Sets the active constant buffer at the specified slot index for subsequent drawing and compute operations.

## Parameters

|    |                         |  |
|----|-------------------------|--|
| in | <i>buffer</i>           | Specifies the constant buffer to set. This buffer must have been created with the buffer type: <a href="#">BufferType::Constant</a> . This must not be an unspecified constant buffer, i.e. it must be initialized with either the initial data in the "RenderSystem::CreateBuffer" function or with the "RenderSystem::WriteBuffer" function. |
| in | <i>slot</i>             | Specifies the slot index where to put the constant buffer.   |
| in | <i>shaderStageFlags</i> | Specifies at which shader stages the constant buffer is to be set. By default all shader stages are affected.  |

See also

[RenderSystem::WriteBuffer](#)  
[ShaderStageFlags](#)

9.11.3.24 `virtual void LLGL::CommandBuffer::SetConstantBufferArray ( BufferArray & bufferArray, unsigned int startSlot, long shaderStageFlags = ShaderStageFlags::AllStages )` [pure virtual]

Sets the active array of constant buffers at the specified start slot index.

Parameters

|    |                    |   |
|----|--------------------|---|
| in | <i>bufferArray</i> | Specifies the constant buffer array to set. |
|----|--------------------|---|

See also

[RenderSystem::CreateBufferArray](#)  
[SetConstantBuffer](#)

9.11.3.25 `virtual void LLGL::CommandBuffer::SetGraphicsAPIDependentState ( const GraphicsAPIDependentState↔ Descriptor & state )` [pure virtual]

Sets a few low-level graphics API dependent states.

Remarks

This is mainly used to work around uniform render target behavior between different low-level graphics APIs such as OpenGL and Direct3D.

9.11.3.26 `virtual void LLGL::CommandBuffer::SetGraphicsPipeline ( GraphicsPipeline & graphicsPipeline )` [pure virtual]

Sets the active graphics pipeline state.

Parameters

|    |                         |   |
|----|-------------------------|---|
| in | <i>graphicsPipeline</i> | Specifies the graphics pipeline state to set. |
|----|-------------------------|---|

Remarks

This will set all blending-, rasterizer-, depth-, stencil-, and shader states. A valid graphics pipeline must always be set before any drawing operation can be performed.

See also

[RenderSystem::CreateGraphicsPipeline](#)

9.11.3.27 `virtual void LLGL::CommandBuffer::SetIndexBuffer ( Buffer & buffer ) [pure virtual]`

Sets the active index buffer for subsequent drawing operations.

#### Parameters

|    |               |   |
|----|---------------|---|
| in | <i>buffer</i> | Specifies the index buffer to set. This buffer must have been created with the buffer type: <a href="#">BufferType::Index</a> . This must not be an unspecified index buffer, i.e. it must be initialized with either the initial data in the "RenderSystem::CreateBuffer" function or with the "RenderSystem::WriteBuffer" function. |
|----|---------------|---|

#### Remarks

An active index buffer is only required for any "DrawIndexed" or "DrawIndexedInstanced" draw call.

#### See also

`RenderSystem::WriteIndexBuffer`

9.11.3.28 `virtual void LLGL::CommandBuffer::SetRenderTarget ( RenderTarget & renderTarget ) [pure virtual]`

Sets the specified render target as the new target for subsequent rendering commands.

#### Parameters

|    |                     |                                     |
|----|---------------------|-------------------------------------|
| in | <i>renderTarget</i> | Specifies the render target to set. |
|----|---------------------|-------------------------------------|

#### Remarks

Subsequent drawing operations will be rendered into the textures that are attached to the specified render target.

#### Note

If the specified render-target has not the same resolution as this render context, the viewports and scissor rectangles may be invalidated!

#### See also

[SetRenderTarget\(RenderContext&\)](#)

9.11.3.29 `virtual void LLGL::CommandBuffer::SetRenderTarget ( RenderContext & renderContext ) [pure virtual]`

Sets the back buffer (or rather swap-chain) of the specified render context as the new target for subsequent rendering commands.

**Remarks**

Subsequent drawing operations will be rendered into the main framebuffer, which can then be presented onto the screen.

**See also**

[SetRenderTarget\(RenderTarget&\)](#)

9.11.3.30 `virtual void LLGL::CommandBuffer::SetSampler ( Sampler & sampler, unsigned int slot, long shaderStageFlags = ShaderStageFlags::AllStages ) [pure virtual]`

Sets the active sampler of the specified slot index for subsequent drawing and compute operations.

**Parameters**

|    |                |  |
|----|----------------|--|
| in | <i>sampler</i> | Specifies the sampler to set.                      |
| in | <i>slot</i>    | Specifies the slot index where to put the sampler. |

**See also**

[RenderSystem::CreateSampler](#)

9.11.3.31 `virtual void LLGL::CommandBuffer::SetSamplerArray ( SamplerArray & samplerArray, unsigned int startSlot, long shaderStageFlags = ShaderStageFlags::AllStages ) [pure virtual]`

Sets the active array of samplers at the specified start slot index.

**See also**

[SetSampler](#)

9.11.3.32 `virtual void LLGL::CommandBuffer::SetScissor ( const Scissor & scissor ) [pure virtual]`

Sets a single scissor rectangle.

**Remarks**

Similar to SetScissorArray but only a single scissor rectangle is set.

**See also**

[SetScissorArray](#)

9.11.3.33 `virtual void LLGL::CommandBuffer::SetScissorArray ( unsigned int numScissors, const Scissor * scissorArray ) [pure virtual]`

Sets an array of scissor rectangles.

## Parameters

|    |                     |  |
|----|---------------------|--|
| in | <i>numScissors</i>  | Specifies the number of scissor rectangles to set.                 |
| in | <i>scissorArray</i> | Pointer to the array of scissor rectangles. This must not be null! |

## Remarks

This function behaves differently on the OpenGL render system, depending on the state configured with the "SetGraphicsAPIDependentState" function. If 'stateOpenGL.screenSpaceOriginLowerLeft' is false, the origin of each scissor rectangle is on the upper-left (like for all other render systems). If 'stateOpenGL.screenSpaceOriginLowerLeft' is true, the origin of each scissor rectangle is on the lower-left.

## See also

[SetGraphicsAPIDependentState](#)

9.11.3.34 `virtual void LLGL::CommandBuffer::SetStorageBuffer ( Buffer & buffer, unsigned int slot, long shaderStageFlags = ShaderStageFlags::AllStages ) [pure virtual]`

Sets the active storage buffer of the specified slot index for subsequent drawing and compute operations.

## Parameters

|    |                         |  |
|----|-------------------------|--|
| in | <i>buffer</i>           | Specifies the storage buffer to set. This buffer must have been created with the buffer type: <a href="#">BufferType::Storage</a> .  |
| in | <i>slot</i>             | Specifies the slot index where to put the storage buffer.  |
| in | <i>shaderStageFlags</i> | Specifies at which shader stages the storage buffer is to be set and which resource views are to be set. By default all shader stages and all resource views are affected. |

## See also

[RenderSystem::MapBuffer](#)  
[RenderSystem::UnmapBuffer](#)

9.11.3.35 `virtual void LLGL::CommandBuffer::SetStorageBufferArray ( BufferArray & bufferArray, unsigned int startSlot, long shaderStageFlags = ShaderStageFlags::AllStages ) [pure virtual]`

Sets the active array of storage buffers at the specified start slot index.

## Parameters

|    |                    |  |
|----|--------------------|--|
| in | <i>bufferArray</i> | Specifies the storage buffer array to set. |
|----|--------------------|--|

## See also

[RenderSystem::CreateBufferArray](#)  
[SetStorageBuffer](#)

9.11.3.36 `virtual void LLGL::CommandBuffer::SetStreamOutputBuffer ( Buffer & buffer )` `[pure virtual]`

Sets the active stream-output buffer to the stream-output stage.

#### Parameters

|    |               |  |
|----|---------------|--|
| in | <i>buffer</i> | Specifies the stream-output buffer to set. This buffer must have been created with the buffer type: <a href="#">BufferType::StreamOutput</a> . |
|----|---------------|--|

#### See also

[RenderSystem::MapBuffer](#)  
[RenderSystem::UnmapBuffer](#)

9.11.3.37 `virtual void LLGL::CommandBuffer::SetStreamOutputBufferArray ( BufferArray & bufferArray )` `[pure virtual]`

Sets the active array of stream-output buffers.

#### Parameters

|    |                    |  |
|----|--------------------|--|
| in | <i>bufferArray</i> | Specifies the stream-output buffer array to set. |
|----|--------------------|--|

#### See also

[RenderSystem::CreateBufferArray](#)  
[SetStreamOutputBuffer](#)

9.11.3.38 `virtual void LLGL::CommandBuffer::SetTexture ( Texture & texture, unsigned int slot, long shaderStageFlags = ShaderStageFlags::AllStages )` `[pure virtual]`

Sets the active texture of the specified slot index for subsequent drawing and compute operations.

#### Parameters

|    |                |  |
|----|----------------|--|
| in | <i>texture</i> | Specifies the texture to set.                      |
| in | <i>slot</i>    | Specifies the slot index where to put the texture. |

9.11.3.39 `virtual void LLGL::CommandBuffer::SetTextureArray ( TextureArray & textureArray, unsigned int startSlot, long shaderStageFlags = ShaderStageFlags::AllStages )` `[pure virtual]`

Sets the active array of textures at the specified start slot index.

#### See also

[SetTexture](#)

9.11.3.40 `virtual void LLGL::CommandBuffer::SetVertexBuffer ( Buffer & buffer )` `[pure virtual]`

Sets the specified vertex buffer for subsequent drawing operations.

#### Parameters

|    |               |  |
|----|---------------|--|
| in | <i>buffer</i> | Specifies the vertex buffer to set. This buffer must have been created with the buffer type: <a href="#">BufferType::Vertex</a> . This must not be an unspecified vertex buffer, i.e. it must be initialized with either the initial data in the "RenderSystem::CreateBuffer" function or with the "RenderSystem::WriteBuffer" function. |
|----|---------------|--|

#### See also

[RenderSystem::CreateBuffer](#)  
[RenderSystem::WriteBuffer](#)  
[SetVertexBufferArray](#)

9.11.3.41 `virtual void LLGL::CommandBuffer::SetVertexBufferArray ( BufferArray & bufferArray )` `[pure virtual]`

Sets the specified array of vertex buffers for subsequent drawing operations.

#### Parameters

|    |                    |   |
|----|--------------------|---|
| in | <i>bufferArray</i> | Specifies the vertex buffer array to set. |
|----|--------------------|---|

#### See also

[RenderSystem::CreateBufferArray](#)  
[SetVertexBuffer](#)

9.11.3.42 `virtual void LLGL::CommandBuffer::SetViewport ( const Viewport & viewport )` `[pure virtual]`

Sets a single viewport.

#### Remarks

Similar to `SetViewportArray` but only a single viewport is set.

#### See also

[SetViewportArray](#)

9.11.3.43 `virtual void LLGL::CommandBuffer::SetViewportArray ( unsigned int numViewports, const Viewport * viewportArray )` `[pure virtual]`

Sets an array of viewports.

## Parameters

|    |                      |   |
|----|----------------------|---|
| in | <i>numViewports</i>  | Specifies the number of viewports to set.                 |
| in | <i>viewportArray</i> | Pointer to the array of viewports. This must not be null! |

## Remarks

This function behaves differently on the OpenGL render system, depending on the state configured with the "SetGraphicsAPIDependentState" function. If 'stateOpenGL.screenSpaceOriginLowerLeft' is false, the origin of each viewport is on the upper-left (like for all other render systems). If 'stateOpenGL.screenSpaceOriginLowerLeft' is true, the origin of each viewport is on the lower-left.

## See also

[SetGraphicsAPIDependentState](#)

**9.11.3.44** `virtual void LLGL::CommandBuffer::SyncGPU ( ) [pure virtual]`

Synchronizes the GPU, i.e. waits until the GPU has completed all pending commands.

## 9.12 LLGL::ComputePipeline Class Reference

Compute pipeline interface.

```
#include <ComputePipeline.h>
```

### Public Member Functions

- virtual [~ComputePipeline](#) ( )

#### 9.12.1 Detailed Description

Compute pipeline interface.

#### 9.12.2 Constructor & Destructor Documentation

**9.12.2.1** `virtual LLGL::ComputePipeline::~ComputePipeline ( ) [inline],[virtual]`

The documentation for this class was generated from the following file:

- [ComputePipeline.h](#)

## 9.13 LLGL::ComputePipelineDescriptor Struct Reference

Compute pipeline descriptor structure.

```
#include <ComputePipeline.h>
```

### Public Member Functions

- [ComputePipelineDescriptor](#) ()=default
- [ComputePipelineDescriptor](#) ([ShaderProgram](#) \**shaderProgram*)

### Public Attributes

- [ShaderProgram](#) \* *shaderProgram* = nullptr  
*Pointer to the shader program for the compute pipeline.*

#### 9.13.1 Detailed Description

Compute pipeline descriptor structure.

#### 9.13.2 Constructor & Destructor Documentation

9.13.2.1 [LLGL::ComputePipelineDescriptor::ComputePipelineDescriptor](#) ( ) [default]

9.13.2.2 [LLGL::ComputePipelineDescriptor::ComputePipelineDescriptor](#) ( [ShaderProgram](#) \* *shaderProgram* )  
[inline]

#### 9.13.3 Member Data Documentation

9.13.3.1 [ShaderProgram](#)\* [LLGL::ComputePipelineDescriptor::shaderProgram](#) = nullptr

Pointer to the shader program for the compute pipeline.

#### Remarks

This must never be null when "RenderSystem::CreateComputePipeline" is called with this structure.

#### See also

[RenderSystem::CreateComputePipeline](#)  
[RenderSystem::CreateShaderProgram](#)

The documentation for this struct was generated from the following file:

- [ComputePipeline.h](#)

## 9.14 LLGL::ConstantBufferViewDescriptor Struct Reference

Constant buffer shader-view descriptor structure.

```
#include <BufferFlags.h>
```

### Public Attributes

- std::string [name](#)  
*Constant buffer name.*
- unsigned int [index](#) = 0  
*Index of the constant buffer within the respective shader.*
- unsigned int [size](#) = 0  
*[Buffer](#) size (in bytes).*

### 9.14.1 Detailed Description

Constant buffer shader-view descriptor structure.

#### Remarks

This structure is used to describe the view of a constant buffer within a shader.

### 9.14.2 Member Data Documentation

#### 9.14.2.1 unsigned int LLGL::ConstantBufferViewDescriptor::index = 0

Index of the constant buffer within the respective shader.

#### 9.14.2.2 std::string LLGL::ConstantBufferViewDescriptor::name

Constant buffer name.

#### 9.14.2.3 unsigned int LLGL::ConstantBufferViewDescriptor::size = 0

[Buffer](#) size (in bytes).

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.15 LLGL::RenderingProfiler::Counter Class Reference

Profiling counter class.

```
#include <RenderingProfiler.h>
```

## Public Types

- using [ValueType](#) = unsigned int

## Public Member Functions

- void [Inc](#) ()  
*Increment internal counter by one.*
- void [Inc](#) ([ValueType](#) value)  
*Increment internal counter by the specified value.*
- void [Reset](#) ()  
*Reset internal counter to zero.*
- [ValueType](#) [Count](#) () const  
*Returns the internal counter value.*
- [operator unsigned int](#) () const  
*Returns the internal counter value (same as "Count()" function).*

### 9.15.1 Detailed Description

Profiling counter class.

### 9.15.2 Member Typedef Documentation

9.15.2.1 using LLGL::RenderingProfiler::Counter::ValueType = unsigned int

### 9.15.3 Member Function Documentation

9.15.3.1 [ValueType](#) LLGL::RenderingProfiler::Counter::Count ( ) const `[inline]`

Returns the internal counter value.

9.15.3.2 void LLGL::RenderingProfiler::Counter::Inc ( ) `[inline]`

Increment internal counter by one.

9.15.3.3 void LLGL::RenderingProfiler::Counter::Inc ( [ValueType](#) value ) `[inline]`

Increment internal counter by the specified value.

9.15.3.4 LLGL::RenderingProfiler::Counter::operator unsigned int ( ) const `[inline]`

Returns the internal counter value (same as "Count()" function).

#### 9.15.3.5 void LLGL::RenderingProfiler::Counter::Reset ( ) [inline]

Reset internal counter to zero.

The documentation for this class was generated from the following file:

- [RenderingProfiler.h](#)

## 9.16 LLGL::DepthDescriptor Struct Reference

Depth state descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- bool [testEnabled](#) = false  
*Specifies whether the depth test is enabled or disabled. By default disabled.*
- bool [writeEnabled](#) = false  
*Specifies whether writing to the depth buffer is enabled or disabled. By default disabled.*
- [CompareOp](#) [compareOp](#) = [CompareOp::Less](#)  
*Specifies the depth test comparison function. By default [CompareOp::Less](#).*

### 9.16.1 Detailed Description

Depth state descriptor structure.

### 9.16.2 Member Data Documentation

#### 9.16.2.1 CompareOp LLGL::DepthDescriptor::compareOp = CompareOp::Less

Specifies the depth test comparison function. By default [CompareOp::Less](#).

#### 9.16.2.2 bool LLGL::DepthDescriptor::testEnabled = false

Specifies whether the depth test is enabled or disabled. By default disabled.

### Remarks

If no pixel shader is used in the graphics pipeline, the depth test must be disabled.

### 9.16.2.3 bool LLGL::DepthDescriptor::writeEnabled = false

Specifies whether writing to the depth buffer is enabled or disabled. By default disabled.

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.17 LLGL::Window::EventListener Class Reference

```
#include <Window.h>
```

Inheritance diagram for LLGL::Window::EventListener:

### Public Member Functions

- virtual [~EventListener](#) ()

### Protected Member Functions

- virtual void [OnProcessEvents](#) ([Window](#) &sender)
- virtual void [OnKeyDown](#) ([Window](#) &sender, [Key](#) keyCode)
- virtual void [OnKeyUp](#) ([Window](#) &sender, [Key](#) keyCode)
- virtual void [OnDoubleClick](#) ([Window](#) &sender, [Key](#) keyCode)
- virtual void [OnChar](#) ([Window](#) &sender, wchar\_t chr)
- virtual void [OnWheelMotion](#) ([Window](#) &sender, int motion)
- virtual void [OnLocalMotion](#) ([Window](#) &sender, const [Point](#) &position)
- virtual void [OnGlobalMotion](#) ([Window](#) &sender, const [Point](#) &motion)
- virtual void [OnResize](#) ([Window](#) &sender, const [Size](#) &clientAreaSize)
- virtual bool [OnQuit](#) ([Window](#) &sender)

*Returns true if the specified window can quit, i.e. "ProcessEvents" returns false from now on.*

### Friends

- class [Window](#)

### 9.17.1 Constructor & Destructor Documentation

9.17.1.1 `virtual LLGL::Window::EventListener::~~EventListener ( )` `[virtual]`

### 9.17.2 Member Function Documentation

9.17.2.1 `virtual void LLGL::Window::EventListener::OnChar ( Window & sender, wchar_t chr )` `[protected]`, `[virtual]`

9.17.2.2 `virtual void LLGL::Window::EventListener::OnDoubleClick ( Window & sender, Key keyCode )` `[protected]`, `[virtual]`

9.17.2.3 `virtual void LLGL::Window::EventListener::OnGlobalMotion ( Window & sender, const Point & motion )` `[protected]`, `[virtual]`

9.17.2.4 `virtual void LLGL::Window::EventListener::OnKeyDown ( Window & sender, Key keyCode )` `[protected]`, `[virtual]`

9.17.2.5 `virtual void LLGL::Window::EventListener::OnKeyUp ( Window & sender, Key keyCode )` `[protected]`, `[virtual]`

9.17.2.6 `virtual void LLGL::Window::EventListener::OnLocalMotion ( Window & sender, const Point & position )` `[protected]`, `[virtual]`

9.17.2.7 `virtual void LLGL::Window::EventListener::OnProcessEvents ( Window & sender )` `[protected]`, `[virtual]`

9.17.2.8 `virtual bool LLGL::Window::EventListener::OnQuit ( Window & sender )` `[protected]`, `[virtual]`

Returns true if the specified window can quit, i.e. "ProcessEvents" returns false from now on.

9.17.2.9 `virtual void LLGL::Window::EventListener::OnResize ( Window & sender, const Size & clientAreaSize )` `[protected]`, `[virtual]`

9.17.2.10 `virtual void LLGL::Window::EventListener::OnWheelMotion ( Window & sender, int motion )` `[protected]`, `[virtual]`

### 9.17.3 Friends And Related Function Documentation

9.17.3.1 `friend class Window` `[friend]`

The documentation for this class was generated from the following file:

- [Window.h](#)

## 9.18 LLGL::GraphicsAPIDependentStateDescriptor Union Reference

Low-level graphics API dependent state descriptor union.

```
#include <RenderContextFlags.h>
```

### Classes

- struct [StateOpenGLDescriptor](#)

### Public Member Functions

- [GraphicsAPIDependentStateDescriptor](#) ()

### Public Attributes

- struct [LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor](#) stateOpenGL

### 9.18.1 Detailed Description

Low-level graphics API dependent state descriptor union.

#### Remarks

This descriptor is used to compensate a few differences between OpenGL and Direct3D.

#### See also

[RenderContext::SetGraphicsAPIDependentState](#)

### 9.18.2 Constructor & Destructor Documentation

9.18.2.1 [LLGL::GraphicsAPIDependentStateDescriptor::GraphicsAPIDependentStateDescriptor \( \)](#) [inline]

### 9.18.3 Member Data Documentation

9.18.3.1 [struct LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor](#)  
[LLGL::GraphicsAPIDependentStateDescriptor::stateOpenGL](#)

The documentation for this union was generated from the following file:

- [RenderContextFlags.h](#)

## 9.19 LLGL::GraphicsPipeline Class Reference

Graphics pipeline interface.

```
#include <GraphicsPipeline.h>
```

### Public Member Functions

- virtual [~GraphicsPipeline](#) ()

### 9.19.1 Detailed Description

Graphics pipeline interface.

### 9.19.2 Constructor & Destructor Documentation

9.19.2.1 virtual LLGL::GraphicsPipeline::~GraphicsPipeline ( ) [inline],[virtual]

The documentation for this class was generated from the following file:

- [GraphicsPipeline.h](#)

## 9.20 LLGL::GraphicsPipelineDescriptor Struct Reference

Graphics pipeline descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- [ShaderProgram](#) \* [shaderProgram](#) = nullptr  
*Pointer to the shader program for the graphics pipeline.*
- [PrimitiveTopology](#) [primitiveTopology](#) = [PrimitiveTopology::TriangleList](#)  
*Specifies the primitive topology and ordering of the primitive data. By default [PrimitiveTopology::TriangleList](#).*
- [DepthDescriptor](#) [depth](#)  
*Specifies the depth state descriptor.*
- [StencilDescriptor](#) [stencil](#)  
*Specifies the stencil state descriptor.*
- [RasterizerDescriptor](#) [rasterizer](#)  
*Specifies the rasterizer state descriptor.*
- [BlendDescriptor](#) [blend](#)  
*Specifies the blending state descriptor.*

### 9.20.1 Detailed Description

Graphics pipeline descriptor structure.

#### Remarks

This structure describes the entire graphics pipeline: viewports, depth-/ stencil-/ rasterizer-/ blend states, shader stages etc.

### 9.20.2 Member Data Documentation

#### 9.20.2.1 BlendDescriptor LLGL::GraphicsPipelineDescriptor::blend

Specifies the blending state descriptor.

#### 9.20.2.2 DepthDescriptor LLGL::GraphicsPipelineDescriptor::depth

Specifies the depth state descriptor.

#### 9.20.2.3 PrimitiveTopology LLGL::GraphicsPipelineDescriptor::primitiveTopology = PrimitiveTopology::TriangleList

Specifies the primitive topology and ordering of the primitive data. By default [PrimitiveTopology::TriangleList](#).

#### See also

[PrimitiveTopology](#)

#### 9.20.2.4 RasterizerDescriptor LLGL::GraphicsPipelineDescriptor::rasterizer

Specifies the rasterizer state descriptor.

#### 9.20.2.5 ShaderProgram\* LLGL::GraphicsPipelineDescriptor::shaderProgram = nullptr

Pointer to the shader program for the graphics pipeline.

#### Remarks

This must never be null when "RenderSystem::CreateGraphicsPipeline" is called with this structure.

#### See also

[RenderSystem::CreateGraphicsPipeline](#)  
[RenderSystem::CreateShaderProgram](#)

### 9.20.2.6 StencilDescriptor LLGL::GraphicsPipelineDescriptor::stencil

Specifies the stencil state descriptor.

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.21 LLGL::ImageDescriptor Struct Reference

Image descriptor structure.

```
#include <Image.h>
```

### Public Member Functions

- [ImageDescriptor](#) ()=default
- [ImageDescriptor](#) ([ImageFormat](#) format, [DataType](#) dataType, const void \*buffer)
- [ImageDescriptor](#) ([ImageFormat](#) format, const void \*buffer, unsigned int compressedSize)  
*Constructor for compressed image data.*
- unsigned int [GetElementSize](#) () const  
*Returns the size (in bytes) for each image element (i.e. per "texel" or "pixel")*

### Public Attributes

- [ImageFormat](#) format = [ImageFormat::RGBA](#)  
*Specifies the image format. By default [ImageFormat::RGBA](#).*
- [DataType](#) dataType = [DataType::UInt8](#)  
*Specifies the image data type. This must be [DataType::UInt8](#) for compressed images.*
- const void \* buffer = nullptr  
*Pointer to the image buffer.*
- unsigned int [compressedSize](#) = 0  
*Specifies the size (in bytes) of a compressed image. This must be 0 for uncompressed images.*

### 9.21.1 Detailed Description

Image descriptor structure.

#### Remarks

This kind of 'Image' is mainly used to fill the image data of a hardware texture.

## 9.21.2 Constructor & Destructor Documentation

9.21.2.1 LLGL::ImageDescriptor::ImageDescriptor ( ) [default]

9.21.2.2 LLGL::ImageDescriptor::ImageDescriptor ( ImageFormat *format*, DataType *dataType*, const void \* *buffer* ) [inline]

9.21.2.3 LLGL::ImageDescriptor::ImageDescriptor ( ImageFormat *format*, const void \* *buffer*, unsigned int *compressedSize* ) [inline]

Constructor for compressed image data.

## 9.21.3 Member Function Documentation

9.21.3.1 unsigned int LLGL::ImageDescriptor::GetElementSize ( ) const

Returns the size (in bytes) for each image element (i.e. per "texel" or "pixel")

Returns

```
ImageFormatSize(format) * DataTypeSize(dataType);
```

## 9.21.4 Member Data Documentation

9.21.4.1 const void\* LLGL::ImageDescriptor::buffer = nullptr

Pointer to the image buffer.

9.21.4.2 unsigned int LLGL::ImageDescriptor::compressedSize = 0

Specifies the size (in bytes) of a compressed image. This must be 0 for uncompressed images.

9.21.4.3 DataType LLGL::ImageDescriptor::dataType = DataType::UInt8

Specifies the image data type. This must be [DataType::UInt8](#) for compressed images.

9.21.4.4 ImageFormat LLGL::ImageDescriptor::format = ImageFormat::RGBA

Specifies the image format. By default [ImageFormat::RGBA](#).

The documentation for this struct was generated from the following file:

- [Image.h](#)

## 9.22 LLGL::BufferDescriptor::IndexBufferDescriptor Struct Reference

```
#include <BufferFlags.h>
```

### Public Attributes

- [IndexFormat](#) format

*Specifies the index format layout, which is basically only the data type of each index.*

### 9.22.1 Member Data Documentation

#### 9.22.1.1 IndexFormat LLGL::BufferDescriptor::IndexBufferDescriptor::format

Specifies the index format layout, which is basically only the data type of each index.

#### Remarks

The only valid format types for an index buffer are: `DataType::UByte`, `DataType::UShort`, and [DataType::UInt](#).

#### See also

[DataType](#)

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.23 LLGL::IndexFormat Class Reference

```
#include <IndexFormat.h>
```

### Public Member Functions

- [IndexFormat](#) ()=default
- [IndexFormat](#) (const [DataType](#) dataType)
- [DataType](#) [GetDataType](#) () const  
*Returns the data type of this index format.*
- unsigned int [GetFormatSize](#) () const  
*Returns the size of this vertex format (in bytes).*

### 9.23.1 Constructor & Destructor Documentation

9.23.1.1 LLGL::IndexFormat::IndexFormat ( ) [default]

9.23.1.2 LLGL::IndexFormat::IndexFormat ( const DataType dataType )

### 9.23.2 Member Function Documentation

9.23.2.1 DataType LLGL::IndexFormat::GetDataType ( ) const [inline]

Returns the data type of this index format.

9.23.2.2 unsigned int LLGL::IndexFormat::GetFormatSize ( ) const [inline]

Returns the size of this vertex format (in bytes).

The documentation for this class was generated from the following file:

- [IndexFormat.h](#)

## 9.24 LLGL::Input Class Reference

```
#include <Input.h>
```

Inheritance diagram for LLGL::Input:

### Public Member Functions

- [Input](#) ( )
- bool [KeyPressed](#) (Key keyCode) const  
*Returns true if the specified key is currently being pressed down.*
- bool [KeyDown](#) (Key keyCode) const  
*Returns true if the specified key was pressed down in the previous event processing.*
- bool [KeyUp](#) (Key keyCode) const  
*Returns true if the specified key was released in the previous event processing.*
- bool [KeyDoubleClick](#) (Key keyCode) const  
*Returns true if the specified key was double clicked.*
- const [Point](#) & [GetMousePosition](#) ( ) const  
*Returns the local mouse position.*
- const [Point](#) & [GetMouseMotion](#) ( ) const  
*Returns the global mouse motion.*
- int [GetWheelMotion](#) ( ) const  
*Returns the mouse wheel motion.*
- const std::wstring & [GetEnteredChars](#) ( ) const  
*Returns the entered characters.*

## Additional Inherited Members

### 9.24.1 Constructor & Destructor Documentation

9.24.1.1 `LLGL::Input::Input ( )`

### 9.24.2 Member Function Documentation

9.24.2.1 `const std::wstring& LLGL::Input::GetEnteredChars ( ) const` `[inline]`

Returns the entered characters.

9.24.2.2 `const Point& LLGL::Input::GetMouseMotion ( ) const` `[inline]`

Returns the global mouse motion.

9.24.2.3 `const Point& LLGL::Input::GetMousePosition ( ) const` `[inline]`

Returns the local mouse position.

9.24.2.4 `int LLGL::Input::GetWheelMotion ( ) const` `[inline]`

Returns the mouse wheel motion.

9.24.2.5 `bool LLGL::Input::KeyDoubleClick ( Key keyCode ) const`

Returns true if the specified key was double clicked.

#### Remarks

This can only be true for the key codes: [Key::LButton](#), [Key::RButton](#), and [Key::MButton](#).

9.24.2.6 `bool LLGL::Input::KeyDown ( Key keyCode ) const`

Returns true if the specified key was pressed down in the previous event processing.

9.24.2.7 `bool LLGL::Input::KeyPressed ( Key keyCode ) const`

Returns true if the specified key is currently being pressed down.

#### 9.24.2.8 bool LLGL::Input::KeyUp ( Key *keyCode* ) const

Returns true if the specified key was released in the previous event processing.

The documentation for this class was generated from the following file:

- [Input.h](#)

## 9.25 LLGL::RenderingDebugger::Message Class Reference

Rendering debugger message class.

```
#include <RenderingDebugger.h>
```

### Public Member Functions

- [Message](#) ()=default
- [Message](#) (const [Message](#) &)=default
- [Message](#) & [operator=](#) (const [Message](#) &)=default
- [Message](#) (const std::string &text, const std::string &source)
- void [Block](#) ()  
*Blocks further occurrences of this message.*
- void [BlockAfter](#) (std::size\_t occurrences)  
*Blocks further occurrences of this message after the specified amount of messages have been occurred.*
- const std::string & [GetText](#) () const  
*Returns the message text.*
- const std::string & [GetSource](#) () const  
*Returns the source function where this message occurred.*
- std::size\_t [GetOccurrences](#) () const  
*Returns the number of occurrences of this message.*
- bool [IsBlocked](#) () const  
*Returns true if this message has already been blocked.*

### Protected Member Functions

- void [IncOccurrence](#) ()

### Friends

- class [RenderingDebugger](#)

#### 9.25.1 Detailed Description

Rendering debugger message class.

## 9.25.2 Constructor & Destructor Documentation

9.25.2.1 `LLGL::RenderingDebugger::Message::Message ( )` [default]

9.25.2.2 `LLGL::RenderingDebugger::Message::Message ( const Message & )` [default]

9.25.2.3 `LLGL::RenderingDebugger::Message::Message ( const std::string & text, const std::string & source )`

## 9.25.3 Member Function Documentation

9.25.3.1 `void LLGL::RenderingDebugger::Message::Block ( )`

Blocks further occurrences of this message.

9.25.3.2 `void LLGL::RenderingDebugger::Message::BlockAfter ( std::size_t occurrences )`

Blocks further occurrences of this message after the specified amount of messages have been occurred.

9.25.3.3 `std::size_t LLGL::RenderingDebugger::Message::GetOccurrences ( ) const` [inline]

Returns the number of occurrences of this message.

9.25.3.4 `const std::string& LLGL::RenderingDebugger::Message::GetSource ( ) const` [inline]

Returns the source function where this message occurred.

9.25.3.5 `const std::string& LLGL::RenderingDebugger::Message::GetText ( ) const` [inline]

Returns the message text.

9.25.3.6 `void LLGL::RenderingDebugger::Message::IncOccurrence ( )` [protected]

9.25.3.7 `bool LLGL::RenderingDebugger::Message::IsBlocked ( ) const` [inline]

Returns true if this message has already been blocked.

9.25.3.8 `Message& LLGL::RenderingDebugger::Message::operator= ( const Message & )` [default]

## 9.25.4 Friends And Related Function Documentation

9.25.4.1 `friend class RenderingDebugger` [friend]

The documentation for this class was generated from the following file:

- [RenderingDebugger.h](#)

## 9.26 LLGL::MultiSamplingDescriptor Struct Reference

Multi-sampling descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Member Functions

- [MultiSamplingDescriptor](#) ()=default
- [MultiSamplingDescriptor](#) (unsigned int [samples](#))
- unsigned int [SampleCount](#) () const  
*Returns the sample count for the state of this multi-sampling descriptor.*

### Public Attributes

- bool [enabled](#) = false  
*Specifies whether multi-sampling is enabled or disabled. By default disabled.*
- unsigned int [samples](#) = 1  
*Number of samples used for multi-sampling. By default 1.*

#### 9.26.1 Detailed Description

Multi-sampling descriptor structure.

#### 9.26.2 Constructor & Destructor Documentation

9.26.2.1 LLGL::MultiSamplingDescriptor::MultiSamplingDescriptor ( ) [default]

9.26.2.2 LLGL::MultiSamplingDescriptor::MultiSamplingDescriptor ( unsigned int *samples* ) [inline]

#### 9.26.3 Member Function Documentation

9.26.3.1 unsigned int LLGL::MultiSamplingDescriptor::SampleCount ( ) const [inline]

Returns the sample count for the state of this multi-sampling descriptor.

Returns

max{ 1, samples } if multi-sampling is enabled, otherwise 1.

#### 9.26.4 Member Data Documentation

9.26.4.1 bool LLGL::MultiSamplingDescriptor::enabled = false

Specifies whether multi-sampling is enabled or disabled. By default disabled.

#### 9.26.4.2 unsigned int LLGL::MultiSamplingDescriptor::samples = 1

Number of samples used for multi-sampling. By default 1.

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.27 LLGL::NativeContextHandle Struct Reference

Linux native context handle structure.

```
#include <LinuxNativeHandle.h>
```

### Public Attributes

- `::Display *` [display](#)
- `::Window` [parentWindow](#)
- `::XVisualInfo *` [visual](#)
- `::Colormap` [colorMap](#)
- `int` [screen](#)
- `NSWindow *` [parentWindow](#)
- `HWND` [parentWindow](#)

### 9.27.1 Detailed Description

Linux native context handle structure.

Win32 native context handle structure.

MacOS native context handle structure.

### 9.27.2 Member Data Documentation

9.27.2.1 `::Colormap` `LLGL::NativeContextHandle::colorMap`

9.27.2.2 `::Display*` `LLGL::NativeContextHandle::display`

9.27.2.3 `HWND` `LLGL::NativeContextHandle::parentWindow`

9.27.2.4 `NSWindow*` `LLGL::NativeContextHandle::parentWindow`

9.27.2.5 `::Window` `LLGL::NativeContextHandle::parentWindow`

9.27.2.6 `int` `LLGL::NativeContextHandle::screen`

9.27.2.7 `::XVisualInfo*` `LLGL::NativeContextHandle::visual`

The documentation for this struct was generated from the following files:

- [LinuxNativeHandle.h](#)
- [MacOSNativeHandle.h](#)
- [Win32NativeHandle.h](#)

## 9.28 LLGL::NativeHandle Struct Reference

Linux native handle structure.

```
#include <LinuxNativeHandle.h>
```

### Public Attributes

- `::Display *` [display](#)
- `::Window` [window](#)
- `::XVisualInfo *` [visual](#)
- `NSWindow *` [window](#)
- `HWND` [window](#)

### 9.28.1 Detailed Description

Linux native handle structure.

Win32 native handle structure.

MacOS native handle structure.

### 9.28.2 Member Data Documentation

9.28.2.1 `::Display*` `LLGL::NativeHandle::display`

9.28.2.2 `::XVisualInfo*` `LLGL::NativeHandle::visual`

9.28.2.3 `NSWindow*` `LLGL::NativeHandle::window`

9.28.2.4 `HWND` `LLGL::NativeHandle::window`

9.28.2.5 `::Window` `LLGL::NativeHandle::window`

The documentation for this struct was generated from the following files:

- [LinuxNativeHandle.h](#)
- [MacOSNativeHandle.h](#)
- [Win32NativeHandle.h](#)

## 9.29 LLGL::ProfileOpenGLDescriptor Struct Reference

OpenGL profile descriptor structure.

```
#include <RenderContextDescriptor.h>
```

## Public Attributes

- `bool extProfile = false`  
*Specifies whether an extended renderer profile is to be used. By default false.*
- `bool coreProfile = false`  
*Specifies whether to use 'OpenGL Core Profile', instead of 'OpenGL Compatibility Profile'. By default disabled.*
- `bool debugDump = false`  
*Specifies whether the hardware renderer will produce debug dump. By default disabled.*
- `OpenGLVersion version = OpenGLVersion::OpenGL_Latest`  
*OpenGL version to create the render context with.*

### 9.29.1 Detailed Description

OpenGL profile descriptor structure.

### 9.29.2 Member Data Documentation

#### 9.29.2.1 `bool LLGL::ProfileOpenGLDescriptor::coreProfile = false`

Specifies whether to use 'OpenGL Core Profile', instead of 'OpenGL Compatibility Profile'. By default disabled.

#### Remarks

This requires 'extProfile' to be enabled.

#### 9.29.2.2 `bool LLGL::ProfileOpenGLDescriptor::debugDump = false`

Specifies whether the hardware renderer will produce debug dump. By default disabled.

#### 9.29.2.3 `bool LLGL::ProfileOpenGLDescriptor::extProfile = false`

Specifies whether an extended renderer profile is to be used. By default false.

#### 9.29.2.4 `OpenGLVersion LLGL::ProfileOpenGLDescriptor::version = OpenGLVersion::OpenGL_Latest`

OpenGL version to create the render context with.

#### Remarks

This required 'coreProfile' to be enabled.

The documentation for this struct was generated from the following file:

- [RenderContextDescriptor.h](#)

## 9.30 LLGL::Query Class Reference

[Query](#) interface.

```
#include <Query.h>
```

### Public Member Functions

- [Query](#) (const [Query](#) &)=delete
- [Query](#) & [operator=](#) (const [Query](#) &)=delete
- virtual [~Query](#) ()
- [QueryType](#) [GetType](#) () const

*Returns the type of this query.*

### Protected Member Functions

- [Query](#) (const [QueryType](#) type)

### 9.30.1 Detailed Description

[Query](#) interface.

### 9.30.2 Constructor & Destructor Documentation

9.30.2.1 LLGL::Query::Query ( const [Query](#) & ) [delete]

9.30.2.2 virtual LLGL::Query::~~Query ( ) [virtual]

9.30.2.3 LLGL::Query::Query ( const [QueryType](#) type ) [protected]

### 9.30.3 Member Function Documentation

9.30.3.1 [QueryType](#) LLGL::Query::GetType ( ) const [inline]

Returns the type of this query.

9.30.3.2 [Query](#)& LLGL::Query::operator= ( const [Query](#) & ) [delete]

The documentation for this class was generated from the following file:

- [Query.h](#)

## 9.31 LLGL::QueryDescriptor Struct Reference

[Query](#) descriptor structure.

```
#include <QueryFlags.h>
```

### Public Member Functions

- [QueryDescriptor](#) ()=default
- [QueryDescriptor](#) ([QueryType](#) type, bool [renderCondition](#)=false)

### Public Attributes

- [QueryType](#) type = [QueryType::SamplesPassed](#)  
*Specifies the type of the query. By default [QueryType::SamplesPassed](#) (occlusion query).*
- bool [renderCondition](#) = false  
*Specifies whether the query is to be used as a render condition. By default false.*

#### 9.31.1 Detailed Description

[Query](#) descriptor structure.

#### 9.31.2 Constructor & Destructor Documentation

9.31.2.1 LLGL::QueryDescriptor::QueryDescriptor ( ) [default]

9.31.2.2 LLGL::QueryDescriptor::QueryDescriptor ( [QueryType](#) type, bool [renderCondition](#) = false ) [inline]

#### 9.31.3 Member Data Documentation

9.31.3.1 bool LLGL::QueryDescriptor::renderCondition = false

Specifies whether the query is to be used as a render condition. By default false.

#### Remarks

If this is true, 'type' can only have one of the following values: [QueryType::SamplesPassed](#), [QueryType::Any↔SamplesPassed](#), [QueryType::AnySamplesPassedConservative](#), or [QueryType::StreamOutOverflow](#).

9.31.3.2 [QueryType](#) LLGL::QueryDescriptor::type = [QueryType::SamplesPassed](#)

Specifies the type of the query. By default [QueryType::SamplesPassed](#) (occlusion query).

The documentation for this struct was generated from the following file:

- [QueryFlags.h](#)

## 9.32 LLGL::RasterizerDescriptor Struct Reference

Rasterizer state descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- `PolygonMode polygonMode = PolygonMode::Fill`  
*Polygon render mode. By default `PolygonMode::Fill`.*
- `CullMode cullMode = CullMode::Disabled`  
*Polygon face culling mode. By default `CullMode::Disabled`.*
- `int depthBias = 0`
- `float depthBiasClamp = 0.0f`
- `float slopeScaledDepthBias = 0.0f`
- `MultiSamplingDescriptor multiSampling`  
*(Multi-)sampling descriptor.*
- `bool frontCCW = false`  
*If true, front facing polygons are in counter-clock-wise winding, otherwise in clock-wise winding.*
- `bool depthClampEnabled = false`
- `bool scissorTestEnabled = false`  
*Specifies whether scissor test is enabled or disabled. By default disabled.*
- `bool antiAliasedLineEnabled = false`  
*Specifies whether lines are rendered with or without anti-aliasing. By default disabled.*
- `bool conservativeRasterization = false`  
*If ture, conservative rasterization is enabled.*

### 9.32.1 Detailed Description

Rasterizer state descriptor structure.

### 9.32.2 Member Data Documentation

#### 9.32.2.1 `bool LLGL::RasterizerDescriptor::antiAliasedLineEnabled = false`

Specifies whether lines are rendered with or without anti-aliasing. By default disabled.

#### 9.32.2.2 `bool LLGL::RasterizerDescriptor::conservativeRasterization = false`

If ture, conservative rasterization is enabled.

#### Note

Only supported with: Direct3D 12 (or OpenGL if the extension "GL\_NV\_conservative\_raster" or "GL\_INTE↵  
L\_conservative\_rasterization" is supported).

#### See also

[https://www.opengl.org/registry/specs/NV/conservative\\_raster.txt](https://www.opengl.org/registry/specs/NV/conservative_raster.txt)  
[https://www.opengl.org/registry/specs/INTEL/conservative\\_rasterization.↵  
txt](https://www.opengl.org/registry/specs/INTEL/conservative_rasterization.↵<br/>txt)

#### 9.32.2.3 **CullMode** `LLGL::RasterizerDescriptor::cullMode = CullMode::Disabled`

Polygon face culling mode. By default [CullMode::Disabled](#).

#### 9.32.2.4 `int LLGL::RasterizerDescriptor::depthBias = 0`

#### 9.32.2.5 `float LLGL::RasterizerDescriptor::depthBiasClamp = 0.0f`

#### 9.32.2.6 `bool LLGL::RasterizerDescriptor::depthClampEnabled = false`

#### 9.32.2.7 `bool LLGL::RasterizerDescriptor::frontCCW = false`

If true, front facing polygons are in counter-clock-wise winding, otherwise in clock-wise winding.

#### 9.32.2.8 **MultiSamplingDescriptor** `LLGL::RasterizerDescriptor::multiSampling`

(Multi-)sampling descriptor.

#### 9.32.2.9 **PolygonMode** `LLGL::RasterizerDescriptor::polygonMode = PolygonMode::Fill`

Polygon render mode. By default [PolygonMode::Fill](#).

#### 9.32.2.10 `bool LLGL::RasterizerDescriptor::scissorTestEnabled = false`

Specifies whether scissor test is enabled or disabled. By default disabled.

#### 9.32.2.11 `float LLGL::RasterizerDescriptor::slopeScaledDepthBias = 0.0f`

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.33 **LLGL::RenderContext** Class Reference

Render context interface.

```
#include <RenderContext.h>
```

## Public Member Functions

- [RenderContext](#) (const [RenderContext](#) &)=delete
- [RenderContext](#) & [operator=](#) (const [RenderContext](#) &)=delete
- virtual [~RenderContext](#) ()
- virtual void [Present](#) ()=0  
*Presents the back buffer on this render context.*
- [Window](#) & [GetWindow](#) () const  
*Returns the window which is used to draw all content.*
- virtual void [SetVideoMode](#) (const [VideoModeDescriptor](#) &videoModeDesc)  
*Sets the new video mode for this render context.*
- virtual void [SetVsync](#) (const [VsyncDescriptor](#) &vsyncDesc)=0  
*Sets the new vertical-synchronization (Vsync) configuration for this render context.*
- const [VideoModeDescriptor](#) & [GetVideoMode](#) () const  
*Returns the video mode for this render context.*

## Protected Member Functions

- [RenderContext](#) ()=default
- void [SetOrCreateWindow](#) (const std::shared\_ptr< [Window](#) > &window, [VideoModeDescriptor](#) &videoModeDesc, const void \*windowContext)  
*Sets the render context window or creates one if 'window' is null.*
- void [ShareWindowAndVideoMode](#) ([RenderContext](#) &other)  
*Shares the window and video mode with another render context.*

### 9.33.1 Detailed Description

Render context interface.

#### Remarks

Each render context has its own window and back buffer (or rather swap-chain) to draw into.

### 9.33.2 Constructor & Destructor Documentation

9.33.2.1 `LLGL::RenderContext::RenderContext ( const RenderContext & )` `[delete]`

9.33.2.2 `virtual LLGL::RenderContext::~~RenderContext ( )` `[virtual]`

9.33.2.3 `LLGL::RenderContext::RenderContext ( )` `[protected]`, `[default]`

### 9.33.3 Member Function Documentation

9.33.3.1 `const VideoModeDescriptor& LLGL::RenderContext::GetVideoMode ( ) const` `[inline]`

Returns the video mode for this render context.

### 9.33.3.2 Window& LLGL::RenderContext::GetWindow ( ) const [inline]

Returns the window which is used to draw all content.

### 9.33.3.3 RenderContext& LLGL::RenderContext::operator= ( const RenderContext & ) [delete]

### 9.33.3.4 virtual void LLGL::RenderContext::Present ( ) [pure virtual]

Presents the back buffer on this render context.

### 9.33.3.5 void LLGL::RenderContext::SetOrCreateWindow ( const std::shared\_ptr< Window > & window, VideoModeDescriptor & videoModeDesc, const void \* windowContext ) [protected]

Sets the render context window or creates one if 'window' is null.

#### Parameters

|         |                      |   |
|---------|----------------------|---|
| in      | <i>window</i>        | Optional shared pointer to a window which will be used as main render target. If this is null, a new window is created for this render context.   |
| in, out | <i>videoModeDesc</i> | Specifies the video mode descriptor. This is used for reading only if 'window' is null, otherwise it is used for writing only and the 'resolution' field will be set to the size of the specified window. |
| in      | <i>Optional</i>      | pointer to a <a href="#">NativeContextHandle</a> structure.   |

#### See also

[WindowDescriptor::windowContext](#)

### 9.33.3.6 virtual void LLGL::RenderContext::SetVideoMode ( const VideoModeDescriptor & videoModeDesc ) [virtual]

Sets the new video mode for this render context.

#### Remarks

This may invalidate the currently set render target if the back buffer is required, so a subsequent call to "[CommandBuffer::SetRenderContext](#)" is required!

#### See also

[CommandBuffer::SetRenderContext\(RenderContext&\)](#)

### 9.33.3.7 virtual void LLGL::RenderContext::SetVsync ( const VsyncDescriptor & vsyncDesc ) [pure virtual]

Sets the new vertical-synchronization (Vsync) configuration for this render context.

9.33.3.8 void LLGL::RenderContext::ShareWindowAndVideoMode ( RenderContext & other ) [protected]

Shares the window and video mode with another render context.

#### Note

This is only used by the renderer debug layer.

The documentation for this class was generated from the following file:

- [RenderContext.h](#)

## 9.34 LLGL::RenderContextDescriptor Struct Reference

Render context descriptor structure.

```
#include <RenderContextDescriptor.h>
```

### Public Attributes

- [VsyncDescriptor](#) vsync  
*Vertical-synchronization (Vsync) descriptor.*
- [MultiSamplingDescriptor](#) multiSampling  
*Sampling descriptor.*
- [VideoModeDescriptor](#) videoMode  
*Video mode descriptor.*
- [ProfileOpenGLDescriptor](#) profileOpenGL  
*OpenGL profile descriptor (to switch between compatability or core profile).*
- [DebugCallback](#) debugCallback  
*Debugging callback descriptor.*

### 9.34.1 Detailed Description

Render context descriptor structure.

### 9.34.2 Member Data Documentation

#### 9.34.2.1 DebugCallback LLGL::RenderContextDescriptor::debugCallback

Debugging callback descriptor.

#### 9.34.2.2 MultiSamplingDescriptor LLGL::RenderContextDescriptor::multiSampling

Sampling descriptor.

### 9.34.2.3 ProfileOpenGLDescriptor LLGL::RenderContextDescriptor::profileOpenGL

OpenGL profile descriptor (to switch between compatability or core profile).

### 9.34.2.4 VideoModeDescriptor LLGL::RenderContextDescriptor::videoMode

Video mode descriptor.

### 9.34.2.5 VsyncDescriptor LLGL::RenderContextDescriptor::vsync

Vertical-synchronization (Vsync) descriptor.

The documentation for this struct was generated from the following file:

- [RenderContextDescriptor.h](#)

## 9.35 LLGL::RendererID Struct Reference

Renderer identification number enumeration.

```
#include <RenderSystemFlags.h>
```

### Static Public Attributes

- static const unsigned int [OpenGL](#) = 0x00000001  
*ID number for the OpenGL renderer.*
- static const unsigned int [Direct3D11](#) = 0x00000002  
*ID number for the Direct3D 11 renderer.*
- static const unsigned int [Direct3D12](#) = 0x00000003  
*ID number for the Direct3D 12 renderer.*
- static const unsigned int [Vulkan](#) = 0x00000004  
*ID number for the Vulkan renderer.*
- static const unsigned int [Reserved5](#) = 0x00000005  
*ID number for a reserved future renderer.*
- static const unsigned int [Reserved6](#) = 0x00000006  
*ID number for a reserved future renderer.*
- static const unsigned int [Reserved7](#) = 0x00000007  
*ID number for a reserved future renderer.*

*ID number for a reserved future renderer.*
- static const unsigned int [ReservedB](#) = 0x0000000b  
*ID number for a reserved future renderer.*
- static const unsigned int [ReservedC](#) = 0x0000000c  
*ID number for a reserved future renderer.*
- static const unsigned int [ReservedD](#) = 0x0000000d  
*ID number for a reserved future renderer.*
- static const unsigned int [ReservedE](#) = 0x0000000e  
*ID number for a reserved future renderer.*
- static const unsigned int [ReservedF](#) = 0x0000000f  
*ID number for a reserved future renderer.*

### 9.35.1 Detailed Description

Renderer identification number enumeration.

See also

[RendererInfo::rendererID](#)

### 9.35.2 Member Data Documentation

**9.35.2.1** `const unsigned int LLGL::RendererID::Direct3D11 = 0x00000002` `[static]`

ID number for the Direct3D 11 renderer.

**9.35.2.2** `const unsigned int LLGL::RendererID::Direct3D12 = 0x00000003` `[static]`

ID number for the Direct3D 12 renderer.

**9.35.2.3** `const unsigned int LLGL::RendererID::OpenGL = 0x00000001` `[static]`

ID number for the OpenGL renderer.

**9.35.2.4** `const unsigned int LLGL::RendererID::Reserved5 = 0x00000005` `[static]`

ID number for a reserved future renderer.

**9.35.2.5** `const unsigned int LLGL::RendererID::Reserved6 = 0x00000006` `[static]`

ID number for a reserved future renderer.

**9.35.2.6** `const unsigned int LLGL::RendererID::Reserved7 = 0x00000007` `[static]`

ID number for a reserved future renderer.

**9.35.2.7** `const unsigned int LLGL::RendererID::Reserved8 = 0x00000008` `[static]`

ID number for a reserved future renderer.

**9.35.2.8** `const unsigned int LLGL::RendererID::Reserved9 = 0x00000009` `[static]`

ID number for a reserved future renderer.

**9.35.2.9** `const unsigned int LLGL::RendererID::ReservedA = 0x0000000a` `[static]`

ID number for a reserved future renderer.

**9.35.2.10** `const unsigned int LLGL::RendererID::ReservedB = 0x0000000b` `[static]`

ID number for a reserved future renderer.

**9.35.2.11** `const unsigned int LLGL::RendererID::ReservedC = 0x0000000c` `[static]`

ID number for a reserved future renderer.

**9.35.2.12** `const unsigned int LLGL::RendererID::ReservedD = 0x0000000d` `[static]`

ID number for a reserved future renderer.

**9.35.2.13** `const unsigned int LLGL::RendererID::ReservedE = 0x0000000e` `[static]`

ID number for a reserved future renderer.

**9.35.2.14** `const unsigned int LLGL::RendererID::ReservedF = 0x0000000f` `[static]`

ID number for a reserved future renderer.

**9.35.2.15** `const unsigned int LLGL::RendererID::Vulkan = 0x00000004` `[static]`

ID number for the Vulkan renderer.

The documentation for this struct was generated from the following file:

- [RenderSystemFlags.h](#)

## 9.36 LLGL::RendererInfo Struct Reference

Renderer basic information structure.

```
#include <RenderSystemFlags.h>
```

## Public Attributes

- std::string [rendererName](#)  
*Rendering API name and version (e.g. "OpenGL 4.5.0").*
- std::string [deviceName](#)  
*Renderer device name (e.g. "GeForce GTX 1070/PCIe/SSE2").*
- std::string [vendorName](#)  
*Vendor name of the renderer device (e.g. "NVIDIA Corporation").*
- std::string [shadingLanguageName](#)  
*Shading language version (e.g. "GLSL 4.50").*
- unsigned int [rendererID](#) = 0  
*Rendering API identification number.*

### 9.36.1 Detailed Description

Renderer basic information structure.

### 9.36.2 Member Data Documentation

#### 9.36.2.1 std::string LLGL::RendererInfo::deviceName

Renderer device name (e.g. "GeForce GTX 1070/PCIe/SSE2").

#### 9.36.2.2 unsigned int LLGL::RendererInfo::rendererID = 0

Rendering API identification number.

#### Remarks

This can be a value of the [RendererID](#) entries. Since the render system is modular, a new render system can use its own ID number.

#### See also

[RendererID](#)

#### 9.36.2.3 std::string LLGL::RendererInfo::rendererName

Rendering API name and version (e.g. "OpenGL 4.5.0").

#### 9.36.2.4 std::string LLGL::RendererInfo::shadingLanguageName

Shading language version (e.g. "GLSL 4.50").

### 9.36.2.5 `std::string LLGL::RendererInfo::vendorName`

Vendor name of the renderer device (e.g. "NVIDIA Corporation").

The documentation for this struct was generated from the following file:

- [RenderSystemFlags.h](#)

## 9.37 LLGL::RenderingCaps Struct Reference

Rendering capabilities structure.

```
#include <RenderSystemFlags.h>
```

### Public Attributes

*Specifies whether cube array textures are supported.*
- `bool` [hasMultiSampleTextures](#) = false  
*Specifies whether multi-sample textures are supported.*
- `bool` [hasSamplers](#) = false  
*Specifies whether samplers are supported.*
- `bool` [hasConstantBuffers](#) = false  
*Specifies whether constant buffers (also "uniform buffer objects") are supported.*
- `bool` [hasStorageBuffers](#) = false  
*Specifies whether storage buffers (also "read/write buffers") are supported.*
- `bool` [hasUniforms](#) = false  
*Specifies whether individual shader uniforms are supported (typically only for OpenGL 2.0+).*
- `bool` [hasGeometryShaders](#) = false  
*Specifies whether geometry shaders are supported.*
- `bool` [hasTessellationShaders](#) = false  
*Specifies whether tessellation shaders are supported.*
- `bool` [hasComputeShaders](#) = false  
*Specifies whether compute shaders are supported.*

- bool [hasInstancing](#) = false  
*Specifies whether hardware instancing is supported.*
- bool [hasOffsetInstancing](#) = false  
*Specifies whether hardware instancing with instance offsets is supported.*
- bool [hasViewportArrays](#) = false  
*Specifies whether multiple viewports, depth-ranges, and scissors are supported at once.*
- bool [hasConservativeRasterization](#) = false  
*Specifies whether conservative rasterization is supported.*
- bool [hasStreamOutputs](#) = false  
*Specifies whether stream-output is supported.*
- unsigned int [maxNumTextureArrayLayers](#) = 0  
*Specifies maximum number of texture array layers (for 1D-, 2D-, and cube textures).*
- unsigned int [maxNumRenderTargetAttachments](#) = 0  
*Specifies maximum number of attachment points for each render target.*
- unsigned int [maxConstantBufferSize](#) = 0  
*Specifies maximum size (in bytes) of each constant buffer.*
- int [maxPatchVertices](#) = 0  
*Specifies maximum number of patch control points.*
- int [max1DTextureSize](#) = 0  
*Specifies maximum size of each 1D texture.*
- int [max2DTextureSize](#) = 0  
*Specifies maximum size of each 2D texture (for width and height).*
- int [max3DTextureSize](#) = 0  
*Specifies maximum size of each 3D texture (for width, height, and depth).*
- int [maxCubeTextureSize](#) = 0  
*Specifies maximum size of each cube texture (for width and height).*
- int [maxAnisotropy](#) = 0  
*Specifies maximum anisotropy texture filter.*
- Gs::Vector3ui [maxNumComputeShaderWorkGroups](#)  
*Specifies maximum number of work groups in a compute shader.*
- Gs::Vector3ui [maxComputeShaderWorkGroupSize](#)  
*Specifies maximum work group size in a compute shader.*

### 9.37.1 Detailed Description

Rendering capabilities structure.

### 9.37.2 Member Data Documentation

#### 9.37.2.1 ClippingRange LLGL::RenderingCaps::clippingRange = ClippingRange::ZeroToOne

Clipping depth range.

#### 9.37.2.2 bool LLGL::RenderingCaps::has3DTextures = false

Specifies whether 3D textures are supported.

See also

[TextureType::Texture3D](#)

**9.37.2.3 bool LLGL::RenderingCaps::hasComputeShaders = false**

Speciifes whether compute shaders are supported.

**9.37.2.4 bool LLGL::RenderingCaps::hasConservativeRasterization = false**

Specifies whether conservative rasterization is supported.

See also

[RasterizerDescriptor::conservativeRasterization](#)

**9.37.2.5 bool LLGL::RenderingCaps::hasConstantBuffers = false**

Specifies whether constant buffers (also "uniform buffer objects") are supported.

See also

[BufferType::Constant](#)

**9.37.2.6 bool LLGL::RenderingCaps::hasCubeTextureArrays = false**

Specifies whether cube array textures are supported.

See also

[TextureType::TextureCubeArray](#)

**9.37.2.7 bool LLGL::RenderingCaps::hasCubeTextures = false**

Specifies whether cube textures are supported.

See also

[TextureType::TextureCube](#)

**9.37.2.8 bool LLGL::RenderingCaps::hasGeometryShaders = false**

Specifies whether geometry shaders are supported.

**9.37.2.9 bool LLGL::RenderingCaps::hasInstancing = false**

Specifies whether hardware instancing is supported.

See also

`RenderContext::DrawInstanced(unsigned int, unsigned int, unsigned int)`  
`RenderContext::DrawIndexedInstanced(unsigned int, unsigned int, unsigned int)`  
`RenderContext::DrawIndexedInstanced(unsigned int, unsigned int, unsigned int, int)`

**9.37.2.10 bool LLGL::RenderingCaps::hasMultiSampleTextures = false**

Specifies whether multi-sample textures are supported.

See also

[TextureType::Texture2DMS](#)  
[TextureType::Texture2DMSArray](#)

**9.37.2.11 bool LLGL::RenderingCaps::hasOffsetInstancing = false**

Specifies whether hardware instancing with instance offsets is supported.

See also

`RenderContext::DrawInstanced(unsigned int, unsigned int, unsigned int, unsigned int)`  
`RenderContext::DrawIndexedInstanced(unsigned int, unsigned int, unsigned int, int, unsigned int)`

**9.37.2.12 bool LLGL::RenderingCaps::hasRenderTargets = false**

Specifies whether render targets (also "frame buffer objects") are supported.

**9.37.2.13 bool LLGL::RenderingCaps::hasSamplers = false**

Specifies whether samplers are supported.

**9.37.2.14 bool LLGL::RenderingCaps::hasStorageBuffers = false**

Specifies whether storage buffers (also "read/write buffers") are supported.

See also

[BufferType::Storage](#)

9.37.2.15 `bool LLGL::RenderingCaps::hasStreamOutputs = false`

Specifies whether stream-output is supported.

See also

[ShaderSource::streamOutput](#)

[CommandBuffer::BeginStreamOutput](#)

9.37.2.16 `bool LLGL::RenderingCaps::hasTessellationShaders = false`

Specifies whether tessellation shaders are supported.

9.37.2.17 `bool LLGL::RenderingCaps::hasTextureArrays = false`

Specifies whether 1D- and 2D array textures are supported.

See also

[TextureType::Texture1DArray](#)

[TextureType::Texture2DArray](#)

9.37.2.18 `bool LLGL::RenderingCaps::hasUniforms = false`

Specifies whether individual shader uniforms are supported (typically only for OpenGL 2.0+).

See also

[ShaderProgram::LockShaderUniform](#)

9.37.2.19 `bool LLGL::RenderingCaps::hasViewportArrays = false`

Specifies whether multiple viewports, depth-ranges, and scissors are supported at once.

9.37.2.20 `int LLGL::RenderingCaps::max1DTextureSize = 0`

Specifies maximum size of each 1D texture.

9.37.2.21 `int LLGL::RenderingCaps::max2DTextureSize = 0`

Specifies maximum size of each 2D texture (for width and height).

9.37.2.22 `int LLGL::RenderingCaps::max3DTextureSize = 0`

Specifies maximum size of each 3D texture (for width, height, and depth).

9.37.2.23 `int LLGL::RenderingCaps::maxAnisotropy = 0`

Specifies maximum anisotropy texture filter.

See also

[SamplerDescriptor::maxAnisotropy](#)

9.37.2.24 `Gs::Vector3ui LLGL::RenderingCaps::maxComputeShaderWorkGroupSize`

Specifies maximum work group size in a compute shader.

9.37.2.25 `unsigned int LLGL::RenderingCaps::maxConstantBufferSize = 0`

Specifies maximum size (in bytes) of each constant buffer.

9.37.2.26 `int LLGL::RenderingCaps::maxCubeTextureSize = 0`

Specifies maximum size of each cube texture (for width and height).

9.37.2.27 `Gs::Vector3ui LLGL::RenderingCaps::maxNumComputeShaderWorkGroups`

Specifies maximum number of work groups in a compute shader.

See also

`RenderContext::Dispatch`

9.37.2.28 `unsigned int LLGL::RenderingCaps::maxNumRenderTargetAttachments = 0`

Specifies maximum number of attachment points for each render target.

9.37.2.29 `unsigned int LLGL::RenderingCaps::maxNumTextureArrayLayers = 0`

Specifies maximum number of texture array layers (for 1D-, 2D-, and cube textures).

9.37.2.30 `int LLGL::RenderingCaps::maxPatchVertices = 0`

Specifies maximum number of patch control points.

### 9.37.2.31 ScreenOrigin LLGL::RenderingCaps::screenOrigin = ScreenOrigin::UpperLeft

Screen coordinate system origin.

#### Remarks

This determines the coordinate space of viewports, scissors, and framebuffers.

### 9.37.2.32 ShadingLanguage LLGL::RenderingCaps::shadingLanguage = ShadingLanguage::Unsupported

Latest supported shading language.

The documentation for this struct was generated from the following file:

- [RenderSystemFlags.h](#)

## 9.38 LLGL::RenderingDebugger Class Reference

Rendering debugger interface.

```
#include <RenderingDebugger.h>
```

### Classes

- class [Message](#)  
*Rendering debugger message class.*

### Public Member Functions

- virtual [~RenderingDebugger](#) ()
- void [SetSource](#) (const char \*source)  
*Sets the new source function name.*
- void [PostError](#) (const [ErrorType](#) type, const std::string &message)  
*Posts an error message.*

*Posts a warning message.*

### Protected Member Functions

- [RenderingDebugger](#) ()=default
- virtual void [OnError](#) ([ErrorType](#) type, [Message](#) &message)
- virtual void [OnWarning](#) ([WarningType](#) type, [Message](#) &message)

### 9.38.1 Detailed Description

Rendering debugger interface.

#### Remarks

This can be used to profile the renderer draw calls and buffer updates.

### 9.38.2 Constructor & Destructor Documentation

9.38.2.1 `virtual LLGL::RenderingDebugger::~RenderingDebugger ( ) [virtual]`

9.38.2.2 `LLGL::RenderingDebugger::RenderingDebugger ( ) [protected], [default]`

### 9.38.3 Member Function Documentation

9.38.3.1 `virtual void LLGL::RenderingDebugger::OnError ( ErrorType type, Message & message ) [protected], [virtual]`

9.38.3.2 `virtual void LLGL::RenderingDebugger::OnWarning ( WarningType type, Message & message ) [protected], [virtual]`

9.38.3.3 `void LLGL::RenderingDebugger::PostError ( const ErrorType type, const std::string & message )`

Posts an error message.

#### Parameters

|    |                |   |
|----|----------------|---|
| in | <i>type</i>    | Specifies the type of error.  |
| in | <i>message</i> | Specifies the string which describes the failure.   |
| in | <i>source</i>  | Specifies the string which describes the source (typically the function where the failure happend). |

9.38.3.4 `void LLGL::RenderingDebugger::PostWarning ( const WarningType type, const std::string & message )`

Posts a warning message.

#### Parameters

|    |                |   |
|----|----------------|---|
| in | <i>type</i>    | Specifies the type of error.  |
| in | <i>message</i> | Specifies the string which describes the warning.   |
| in | <i>source</i>  | Specifies the string which describes the source (typically the function where the failure happend). |

### 9.38.3.5 void LLGL::RenderingDebugger::SetSource ( const char \* *source* )

Sets the new source function name.

The documentation for this class was generated from the following file:

- [RenderingDebugger.h](#)

## 9.39 LLGL::RenderingProfiler Class Reference

Rendering profiler model class.

```
#include <RenderingProfiler.h>
```

### Classes

## 9.40 LLGL::RenderSystem Class Reference

Render system interface.

```
#include <RenderSystem.h>
```

## Public Member Functions

- [RenderSystem](#) (const [RenderSystem](#) &)=delete
- [RenderSystem](#) & [operator=](#) (const [RenderSystem](#) &)=delete
- virtual [~RenderSystem](#) ()
- const std::string & [GetName](#) () const  
*Returns the name of this render system.*
- const [RendererInfo](#) & [GetRendererInfo](#) () const  
*Returns basic renderer information.*
- const [RenderingCaps](#) & [GetRenderingCaps](#) () const  
*Returns the rendering capabilities.*
- virtual void [SetConfiguration](#) (const [RenderSystemConfiguration](#) &config)  
*Sets the basic configuration.*
- const [RenderSystemConfiguration](#) & [GetConfiguration](#) () const  
*Returns the basic configuration.*
- virtual [RenderContext](#) \* [CreateRenderContext](#) (const [RenderContextDescriptor](#) &desc, const std::shared\_ptr< [Window](#) > &window=nullptr)=0  
*Creates a new render context and returns the raw pointer.*
- virtual void [Release](#) ([RenderContext](#) &renderContext)=0  
*Releases the specified render context. This will all release all resources, that are associated with this render context.*
- virtual [CommandBuffer](#) \* [CreateCommandBuffer](#) ()=0  
*Creates a new command buffer.*
- virtual void [Release](#) ([CommandBuffer](#) &commandBuffer)=0  
*Releases the specified command buffer. After this call, the specified object must no longer be used.*
- virtual [Buffer](#) \* [CreateBuffer](#) (const [BufferDescriptor](#) &desc, const void \*initialData=nullptr)=0  
*Creates a new generic hardware buffer.*
- virtual [BufferArray](#) \* [CreateBufferArray](#) (unsigned int numBuffers, [Buffer](#) \*const \*bufferArray)=0  
*Creates a new buffer array.*
- virtual void [Release](#) ([Buffer](#) &buffer)=0  
*Releases the specified buffer object. After this call, the specified object must no longer be used.*
- virtual void [Release](#) ([BufferArray](#) &bufferArray)=0  
*Releases the specified buffer array object. After this call, the specified object must no longer be used.*
- virtual void [WriteBuffer](#) ([Buffer](#) &buffer, const void \*data, std::size\_t dataSize, std::size\_t offset)=0  
*Updates the data of the specified buffer.*
- virtual void \* [MapBuffer](#) ([Buffer](#) &buffer, const [BufferCPUAccess](#) access)=0  
*Maps the specified buffer from GPU to CPU memory space.*
- virtual void [UnmapBuffer](#) ([Buffer](#) &buffer)=0  
*Unmaps the specified buffer.*
- virtual [Texture](#) \* [CreateTexture](#) (const [TextureDescriptor](#) &textureDesc, const [ImageDescriptor](#) \*imageDesc=nullptr)=0  
*Creates a new texture.*
- virtual [TextureArray](#) \* [CreateTextureArray](#) (unsigned int numTextures, [Texture](#) \*const \*textureArray)=0  
*Creates a new texture array.*
- virtual void [Release](#) ([Texture](#) &texture)=0  
*Releases the specified texture object. After this call, the specified object must no longer be used.*
- virtual void [Release](#) ([TextureArray](#) &textureArray)=0  
*Releases the specified texture array object. After this call, the specified object must no longer be used.*
- virtual [TextureDescriptor](#) [QueryTextureDescriptor](#) (const [Texture](#) &texture)=0  
*Queries a descriptor of the specified texture.*
- virtual void [WriteTexture](#) ([Texture](#) &texture, const [SubTextureDescriptor](#) &subTextureDesc, const [ImageDescriptor](#) &imageDesc)=0

- Updates the image data of the specified texture.*
- virtual void [ReadTexture](#) (const [Texture](#) &texture, int mipLevel, [ImageFormat](#) imageFormat, [DataType](#) data←Type, void \*buffer)=0
- Reads the image data from the specified texture.*
- virtual void [GenerateMips](#) ([Texture](#) &texture)=0
- Generates the MIP ("Multum in Parvo") maps for the specified texture.*
- virtual [Sampler](#) \* [CreateSampler](#) (const [SamplerDescriptor](#) &desc)=0
- Creates a new [Sampler](#) object.*
- virtual [SamplerArray](#) \* [CreateSamplerArray](#) (unsigned int numSamplers, [Sampler](#) \*const \*samplerArray)=0
- Creates a new sampler array.*
- virtual void [Release](#) ([Sampler](#) &sampler)=0
- Releases the specified [Sampler](#) object. After this call, the specified object must no longer be used.*
- virtual void [Release](#) ([SamplerArray](#) &samplerArray)=0
- Releases the specified sampler array object. After this call, the specified object must no longer be used.*
- virtual [RenderTarget](#) \* [CreateRenderTarget](#) (const [RenderTargetDescriptor](#) &desc)=0
- Creates a new [RenderTarget](#) object.*
- virtual void [Release](#) ([RenderTarget](#) &renderTarget)=0
- Releases the specified [RenderTarget](#) object. After this call, the specified object must no longer be used.*
- virtual [Shader](#) \* [CreateShader](#) (const [ShaderType](#) type)=0
- Creates a new and empty [Shader](#) object of the specified type.*
- virtual [ShaderProgram](#) \* [CreateShaderProgram](#) ()=0
- Creates a new and empty shader program.*
- virtual void [Release](#) ([Shader](#) &shader)=0
- Releases the specified [Shader](#) object. After this call, the specified object must no longer be used.*
- virtual void [Release](#) ([ShaderProgram](#) &shaderProgram)=0
- Releases the specified [ShaderProgram](#) object. After this call, the specified object must no longer be used.*
- virtual [GraphicsPipeline](#) \* [CreateGraphicsPipeline](#) (const [GraphicsPipelineDescriptor](#) &desc)=0
- Creates a new and initialized graphics pipeline state object.*
- virtual [ComputePipeline](#) \* [CreateComputePipeline](#) (const [ComputePipelineDescriptor](#) &desc)=0
- Creates a new and initialized compute pipeline state object.*
- virtual void [Release](#) ([GraphicsPipeline](#) &graphicsPipeline)=0
- Releases the specified [GraphicsPipeline](#) object. After this call, the specified object must no longer be used.*
- virtual void [Release](#) ([ComputePipeline](#) &computePipeline)=0
- Releases the specified [ComputePipeline](#) object. After this call, the specified object must no longer be used.*
- virtual [Query](#) \* [CreateQuery](#) (const [QueryDescriptor](#) &desc)=0
- Creates a new query.*
- virtual void [Release](#) ([Query](#) &query)=0
- Releases the specified [Query](#) object. After this call, the specified object must no longer be used.*

## Static Public Member Functions

- static std::vector< std::string > [FindModules](#) ()
- Returns the list of all available render system modules for the current platform (e.g. on Windows this might be { "OpenGL", "Direct3D11", "Direct3D12" }, but on MacOS it might be only { "OpenGL" }).*
- static std::shared\_ptr< [RenderSystem](#) > [Load](#) (const std::string &moduleName, [RenderingProfiler](#) \*profiler=nullptr, [RenderingDebugger](#) \*debugger=nullptr)
- Loads a new render system from the specified module.*

## Protected Member Functions

- `RenderSystem()`=default
- void `SetRendererInfo` (const `RendererInfo` &info)  
*Sets the renderer information.*
- void `SetRenderingCaps` (const `RenderingCaps` &caps)  
*Sets the rendering capabilities.*
- `std::vector< ColorRGBAub > GetDefaultTextureImageRGBAub` (int numPixels) const  
*Creates an RGBA unsigned-byte image buffer for the specified number of pixels.*
- void `AssertCreateBuffer` (const `BufferDescriptor` &desc)  
*Validates the specified buffer descriptor to be used for buffer creation.*
- void `AssertCreateBufferArray` (unsigned int numBuffers, `Buffer` \*const \*bufferArray)  
*Validates the specified arguments to be used for buffer array creation.*
- void `AssertCreateTextureArray` (unsigned int numTextures, `Texture` \*const \*textureArray)  
*Validates the specified arguments to be used for texture array creation.*
- void `AssertCreateSamplerArray` (unsigned int numSamplers, `Sampler` \*const \*samplerArray)  
*Validates the specified arguments to be used for sampler array creation.*

### 9.40.1 Detailed Description

Render system interface.

#### Remarks

This is the main interface for the entire renderer. It manages the ownership of all graphics objects and is used to create, modify, and delete all those objects. The main functions for most graphics objects are "Create...", "Write...", and "Release":

```
// Create and initialize vertex buffer
LLGL::BufferDescriptor bufferDesc;
//fill descriptor ...
auto vertexBuffer = renderSystem->CreateBuffer(*buffer, bufferDesc, initialData);

// Modify data
renderSystem->WriteBuffer(*buffer, modificationData, ...);

// Release object
renderSystem->Release(*buffer);
```

### 9.40.2 Constructor & Destructor Documentation

9.40.2.1 `LLGL::RenderSystem::RenderSystem ( const RenderSystem & )` [delete]

9.40.2.2 `virtual LLGL::RenderSystem::~~RenderSystem ( )` [virtual]

9.40.2.3 `LLGL::RenderSystem::RenderSystem ( )` [protected],[default]

### 9.40.3 Member Function Documentation

9.40.3.1 `void LLGL::RenderSystem::AssertCreateBuffer ( const BufferDescriptor & desc )` [protected]

Validates the specified buffer descriptor to be used for buffer creation.

**9.40.3.2** `void LLGL::RenderSystem::AssertCreateBufferArray ( unsigned int numBuffers, Buffer *const * bufferArray )`  
`[protected]`

Validates the specified arguments to be used for buffer array creation.

**9.40.3.3** `void LLGL::RenderSystem::AssertCreateSamplerArray ( unsigned int numSamplers, Sampler *const * samplerArray )`  
`[protected]`

Validates the specified arguments to be used for sampler array creation.

**9.40.3.4** `void LLGL::RenderSystem::AssertCreateTextureArray ( unsigned int numTextures, Texture *const * textureArray )`  
`[protected]`

Validates the specified arguments to be used for texture array creation.

**9.40.3.5** `virtual Buffer* LLGL::RenderSystem::CreateBuffer ( const BufferDescriptor & desc, const void * initialData = nullptr )` `[pure virtual]`

Creates a new generic hardware buffer.

#### Parameters

|    |                    |  |
|----|--------------------|--|
| in | <i>desc</i>        | Specifies the vertex buffer descriptor.  |
| in | <i>initialData</i> | Optional raw pointer to the data with which the buffer is to be initialized. This may also be null, to only initialize the size of the buffer. In this case, the buffer must be initialized with the "WriteBuffer" function before it is used for drawing operations. By default null. |

#### See also

[WriteBuffer](#)

**9.40.3.6** `virtual BufferArray* LLGL::RenderSystem::CreateBufferArray ( unsigned int numBuffers, Buffer *const * bufferArray )` `[pure virtual]`

Creates a new buffer array.

#### Parameters

|    |                    |   |
|----|--------------------|---|
| in | <i>numBuffers</i>  | Specifies the number of buffers in the array. This must be greater than 0.            |
| in | <i>bufferArray</i> | Pointer to an array of <a href="#">Buffer</a> object pointers. This must not be null. |

#### Remarks

This array can only contain buffers which are all from the same type, like an array of vertex buffers for instance. The buffers inside this array must persist as long as this buffer array is used, and the individual buffers are still required to read and write its data from and to the GPU.

## Exceptions

|                                    |   |
|------------------------------------|---|
| <code>std::invalid_argument</code> | If 'numBuffers' is 0, if 'bufferArray' is null, if any of the pointers in the array are null, if not all buffers have the same type, or if the buffer array type is not one of these: <a href="#">BufferType::Vertex</a> , <a href="#">BufferType::Constant</a> , <a href="#">BufferType::Storage</a> , or <a href="#">BufferType::StreamOutput</a> . |
|------------------------------------|---|

9.40.3.7 virtual **CommandBuffer\*** LLGL::RenderSystem::CreateCommandBuffer ( ) [pure virtual]

Creates a new command buffer.

## Remarks

Some render systems only support a single command buffer, such as OpenGL and Direct3D 11.

9.40.3.8 virtual **ComputePipeline\*** LLGL::RenderSystem::CreateComputePipeline ( const **ComputePipelineDescriptor** & desc ) [pure virtual]

Creates a new and initialized compute pipeline state object.

## Parameters

| in | desc |   |
|----|------|---|
|    |      | Specifies the compute pipeline descriptor. This will describe the shader states. The "shaderProgram" member of the descriptor must never be null! |

## See also

[ComputePipelineDescriptor](#)

9.40.3.9 virtual **GraphicsPipeline\*** LLGL::RenderSystem::CreateGraphicsPipeline ( const **GraphicsPipelineDescriptor** & desc ) [pure virtual]

Creates a new and initialized graphics pipeline state object.

## Parameters

| in | desc |   |
|----|------|---|
|    |      | Specifies the graphics pipeline descriptor. This will describe the entire pipeline state, i.e. the blending-, rasterizer-, depth-, stencil- and shader states. The "shaderProgram" member of the descriptor must never be null! |

## See also

[GraphicsPipelineDescriptor](#)

9.40.3.10 virtual **Query\*** LLGL::RenderSystem::CreateQuery ( const **QueryDescriptor** & desc ) [pure virtual]

Creates a new query.

9.40.3.11 `virtual RenderContext* LLGL::RenderSystem::CreateRenderContext ( const RenderContextDescriptor & desc, const std::shared_ptr< Window > & window = nullptr ) [pure virtual]`

Creates a new render context and returns the raw pointer.

#### Remarks

The render system takes the ownership of this object. All render contexts are deleted in the destructor of this render system.

9.40.3.12 `virtual RenderTarget* LLGL::RenderSystem::CreateRenderTarget ( const RenderTargetDescriptor & desc ) [pure virtual]`

Creates a new [RenderTarget](#) object.

#### Exceptions

|                                 |  |
|---------------------------------|--|
| <code>std::runtime_error</code> | If the renderer does not support <a href="#">RenderTarget</a> objects (e.g. if OpenGL 2.1 or lower is used). |
|---------------------------------|--|

9.40.3.13 `virtual Sampler* LLGL::RenderSystem::CreateSampler ( const SamplerDescriptor & desc ) [pure virtual]`

Creates a new [Sampler](#) object.

#### Exceptions

|                                 |   |
|---------------------------------|---|
| <code>std::runtime_error</code> | If the renderer does not support <a href="#">Sampler</a> objects (e.g. if OpenGL 3.1 or lower is used). |
|---------------------------------|---|

#### See also

[RenderContext::QueryRenderingCaps](#)

9.40.3.14 `virtual SamplerArray* LLGL::RenderSystem::CreateSamplerArray ( unsigned int numSamplers, Sampler *const * samplerArray ) [pure virtual]`

Creates a new sampler array.

#### Parameters

|    |                           |  |
|----|---------------------------|--|
| in | <code>numSamplers</code>  | Specifies the number of samplers in the array. This must be greater than 0.            |
| in | <code>samplerArray</code> | Pointer to an array of <a href="#">Sampler</a> object pointers. This must not be null. |

#### Exceptions

|                                    |  |
|------------------------------------|--|
| <code>std::invalid_argument</code> | If 'numSamplers' is 0, if 'samplerArray' is null, or if any of the pointers in the array are null. |
|------------------------------------|--|

9.40.3.15 `virtual Shader* LLGL::RenderSystem::CreateShader ( const ShaderType type ) [pure virtual]`

Creates a new and empty [Shader](#) object of the specified type.

#### Parameters

|    |             |   |
|----|-------------|---|
| in | <i>type</i> | Specifies the type of the shader, i.e. if it is either a vertex or fragment shader or the like. |
|----|-------------|---|

#### See also

[Shader](#)

9.40.3.16 `virtual ShaderProgram* LLGL::RenderSystem::CreateShaderProgram ( ) [pure virtual]`

Creates a new and empty shader program.

#### Remarks

At least one shader must be attached to a shader program to be used for a graphics or compute pipeline.

#### See also

[ShaderProgram](#)

9.40.3.17 `virtual Texture* LLGL::RenderSystem::CreateTexture ( const TextureDescriptor & textureDesc, const ImageDescriptor * imageDesc = nullptr ) [pure virtual]`

Creates a new texture.

#### Parameters

|    |                    |   |
|----|--------------------|---|
| in | <i>textureDesc</i> | Specifies the texture descriptor.   |
| in | <i>imageDesc</i>   | Optional pointer to the image data descriptor. If this is null, the texture will be initialized with the currently configured default image color. If this is non-null, it is used to initialize the texture data. This parameter will be ignored if the texture type is a multi-sampled texture (i.e. <a href="#">TextureType::Texture2DMS</a> or <a href="#">TextureType::Texture2DMSArray</a> ). |

#### See also

[WriteTexture](#)

[RenderSystemConfiguration::defaultImageColor](#)

9.40.3.18 `virtual TextureArray* LLGL::RenderSystem::CreateTextureArray ( unsigned int numTextures, Texture *const * textureArray ) [pure virtual]`

Creates a new texture array.

## Parameters

|    |                     |  |
|----|---------------------|--|
| in | <i>numTextures</i>  | Specifies the number of textures in the array. This must be greater than 0.            |
| in | <i>textureArray</i> | Pointer to an array of <a href="#">Texture</a> object pointers. This must not be null. |

## Remarks

This texture array is not an "array texture" (like [TextureType::Texture2DArray](#) for instance). It is just a container of multiple texture objects, which can be used to bind several hardware textures at once, to improve performance.

## Exceptions

|                              |  |
|------------------------------|--|
| <i>std::invalid_argument</i> | If 'numTextures' is 0, if 'textureArray' is null, or if any of the pointers in the array are null. |
|------------------------------|--|

9.40.3.19 `static std::vector<std::string> LLGL::RenderSystem::FindModules ( ) [static]`

Returns the list of all available render system modules for the current platform (e.g. on Windows this might be { "OpenGL", "Direct3D11", "Direct3D12" }, but on MacOS it might be only { "OpenGL" }).

9.40.3.20 `virtual void LLGL::RenderSystem::GenerateMips ( Texture & texture ) [pure virtual]`

Generates the MIP ("Multum in Parvo") maps for the specified texture.

## See also

[https://developer.valvesoftware.com/wiki/MIP\\_Mapping](https://developer.valvesoftware.com/wiki/MIP_Mapping)

9.40.3.21 `const RenderSystemConfiguration& LLGL::RenderSystem::GetConfiguration ( ) const [inline]`

Returns the basic configuration.

## See also

[SetConfiguration](#)

9.40.3.22 `std::vector<ColorRGBAub> LLGL::RenderSystem::GetDefaultTextureImageRGBAub ( int numPixels ) const [protected]`

Creates an RGBA unsigned-byte image buffer for the specified number of pixels.

9.40.3.23 `const std::string& LLGL::RenderSystem::GetName ( ) const [inline]`

Returns the name of this render system.

#### 9.40.3.24 `const RendererInfo& LLGL::RenderSystem::GetRendererInfo ( ) const [inline]`

Returns basic renderer information.

##### Remarks

The validity of these information is only guaranteed if this function is called after a valid render context has been created. Otherwise the behavior is undefined!

#### 9.40.3.25 `const RenderingCaps& LLGL::RenderSystem::GetRenderingCaps ( ) const [inline]`

Returns the rendering capabilities.

##### Remarks

The validity of these information is only guaranteed if this function is called after a valid render context has been created. Otherwise the behavior is undefined!

#### 9.40.3.26 `static std::shared_ptr<RenderSystem> LLGL::RenderSystem::Load ( const std::string & moduleName, RenderingProfiler * profiler = nullptr, RenderingDebugger * debugger = nullptr ) [static]`

Loads a new render system from the specified module.

##### Parameters

|    |                   |   |
|----|-------------------|---|
| in | <i>moduleName</i> | Specifies the name from which the new render system is to be loaded. This denotes a dynamic library (*.dll-files on Windows, *.so-files on Unix systems). If compiled in debug mode, the postfix "D" is appended to the module name. Moreover, the platform dependent file extension is always added automatically as well as the prefix "LLGL_", i.e. a module name "OpenGL" will be translated to "LLGL_OpenGLD.dll", if compiled on Windows in Debug mode. |
| in | <i>profiler</i>   | Optional pointer to a rendering profiler. If this is used, the counters of the profiler must be reset manually. This is only supported if LLGL was compiled with the "LLGL_ENABLE_DEBUG_LAYER" flag.  |
| in | <i>debugger</i>   | Optional pointer to a rendering debugger. This is only supported if LLGL was compiled with the "LLGL_ENABLE_DEBUG_LAYER" flag.  |

##### Remarks

Usually the return type is a `std::unique_ptr`, but LLGL needs to keep track of the existence of this render system because only a single instance can be loaded at a time. So a `std::weak_ptr` is stored internally to check if it has been expired (see [http://en.cppreference.com/w/cpp/memory/weak\\_ptr/expired](http://en.cppreference.com/w/cpp/memory/weak_ptr/expired)), and this type can only refer to a `std::shared_ptr`.

##### Exceptions

|                           |   |
|---------------------------|---|
| <i>std::runtime_error</i> | If loading the render system from the specified module failed.  |
| <i>std::runtime_error</i> | If there is already a loaded instance of a render system (make sure there are no more shared pointer references to the previous render system!) |

**9.40.3.27** `virtual void* LLGL::RenderSystem::MapBuffer ( Buffer & buffer, const BufferCPUAccess access )` [pure virtual]

Maps the specified buffer from GPU to CPU memory space.

#### Parameters

|    |               |   |
|----|---------------|---|
| in | <i>buffer</i> | Specifies the buffer which is to be mapped.   |
| in | <i>access</i> | Specifies the CPU buffer access requirement, i.e. if the CPU can read and/or write the mapped memory. |

#### Returns

Raw pointer to the mapped memory block. You should be aware of the storage buffer size, to not cause memory violations.

#### See also

[UnmapBuffer](#)

**9.40.3.28** `RenderSystem& LLGL::RenderSystem::operator= ( const RenderSystem & )` [delete]

**9.40.3.29** `virtual TextureDescriptor LLGL::RenderSystem::QueryTextureDescriptor ( const Texture & texture )` [pure virtual]

Queries a descriptor of the specified texture.

#### Remarks

This can be used to query the type and dimension size of the texture.

#### See also

[TextureDescriptor](#)

**9.40.3.30** `virtual void LLGL::RenderSystem::ReadTexture ( const Texture & texture, int mipLevel, ImageFormat imageFormat, DataType dataType, void* buffer )` [pure virtual]

Reads the image data from the specified texture.

#### Parameters

|     |                    |   |
|-----|--------------------|---|
| in  | <i>texture</i>     | Specifies the texture object to read from.  |
| in  | <i>mipLevel</i>    | Specifies the MIP-level from which to read the image data.  |
| in  | <i>imageFormat</i> | Specifies the output image format.  |
| in  | <i>dataType</i>    | Specifies the output data type.   |
| out | <i>buffer</i>      | Specifies the output image buffer. This must be a pointer to a memory block, which is large enough to fit all the image data. |

## Remarks

Depending on the image format, data type, and texture size, the output image container must be allocated with enough memory size. The "QueryTextureDescriptor" function can be used to determine the texture dimensions.

```
std::vector<LLGL::ColorRGBAub> image(textureWidth*textureHeight);
renderSystem->ReadTexture(texture, 0, LLGL::ImageFormat::RGBA,
    LLGL::DataType::UInt8, image.data());
```

## See also

[QueryTextureDescriptor](#)

**9.40.3.31** `virtual void LLGL::RenderSystem::Release ( RenderContext & renderContext )` [pure virtual]

Releases the specified render context. This will all release all resources, that are associated with this render context.

**9.40.3.32** `virtual void LLGL::RenderSystem::Release ( CommandBuffer & commandBuffer )` [pure virtual]

Releases the specified command buffer. After this call, the specified object must no longer be used.

**9.40.3.33** `virtual void LLGL::RenderSystem::Release ( Buffer & buffer )` [pure virtual]

Releases the specified buffer object. After this call, the specified object must no longer be used.

**9.40.3.34** `virtual void LLGL::RenderSystem::Release ( BufferArray & bufferArray )` [pure virtual]

Releases the specified buffer array object. After this call, the specified object must no longer be used.

**9.40.3.35** `virtual void LLGL::RenderSystem::Release ( Texture & texture )` [pure virtual]

Releases the specified texture object. After this call, the specified object must no longer be used.

**9.40.3.36** `virtual void LLGL::RenderSystem::Release ( TextureArray & textureArray )` [pure virtual]

Releases the specified texture array object. After this call, the specified object must no longer be used.

**9.40.3.37** `virtual void LLGL::RenderSystem::Release ( Sampler & sampler )` [pure virtual]

Releases the specified [Sampler](#) object. After this call, the specified object must no longer be used.

**9.40.3.38** `virtual void LLGL::RenderSystem::Release ( SamplerArray & samplerArray )` [pure virtual]

Releases the specified sampler array object. After this call, the specified object must no longer be used.

9.40.3.39 `virtual void LLGL::RenderSystem::Release ( RenderTarget & renderTarget )` `[pure virtual]`

Releases the specified [RenderTarget](#) object. After this call, the specified object must no longer be used.

9.40.3.40 `virtual void LLGL::RenderSystem::Release ( Shader & shader )` `[pure virtual]`

Releases the specified [Shader](#) object. After this call, the specified object must no longer be used.

9.40.3.41 `virtual void LLGL::RenderSystem::Release ( ShaderProgram & shaderProgram )` `[pure virtual]`

Releases the specified [ShaderProgram](#) object. After this call, the specified object must no longer be used.

9.40.3.42 `virtual void LLGL::RenderSystem::Release ( GraphicsPipeline & graphicsPipeline )` `[pure virtual]`

Releases the specified [GraphicsPipeline](#) object. After this call, the specified object must no longer be used.

9.40.3.43 `virtual void LLGL::RenderSystem::Release ( ComputePipeline & computePipeline )` `[pure virtual]`

Releases the specified [ComputePipeline](#) object. After this call, the specified object must no longer be used.

9.40.3.44 `virtual void LLGL::RenderSystem::Release ( Query & query )` `[pure virtual]`

Releases the specified [Query](#) object. After this call, the specified object must no longer be used.

9.40.3.45 `virtual void LLGL::RenderSystem::SetConfiguration ( const RenderSystemConfiguration & config )`  
`[virtual]`

Sets the basic configuration.

#### Remarks

This can be used to change the behavior of default initialization of textures for instance.

#### See also

[RenderSystemConfiguration](#)

9.40.3.46 `void LLGL::RenderSystem::SetRendererInfo ( const RendererInfo & info )` `[protected]`

Sets the renderer information.

9.40.3.47 `void LLGL::RenderSystem::SetRenderingCaps ( const RenderingCaps & caps )` [protected]

Sets the rendering capabilities.

9.40.3.48 `virtual void LLGL::RenderSystem::UnmapBuffer ( Buffer & buffer )` [pure virtual]

Unmaps the specified buffer.

See also

[MapBuffer](#)

9.40.3.49 `virtual void LLGL::RenderSystem::WriteBuffer ( Buffer & buffer, const void * data, std::size_t dataSize, std::size_t offset )` [pure virtual]

Updates the data of the specified buffer.

#### Parameters

|    |                 |   |
|----|-----------------|---|
| in | <i>buffer</i>   | Specifies the buffer whose data is to be updated.   |
| in | <i>data</i>     | Raw pointer to the data with which the buffer is to be updated. This must not be null!  |
| in | <i>dataSize</i> | Specifies the size (in bytes) of the data block which is to be updated. This must be less then or equal to the size of the buffer.  |
| in | <i>offset</i>   | Specifies the offset (in bytes) at which the buffer is to be updated. This offset plus the data block size (i.e. 'offset + dataSize') must be less than or equal to the size of the buffer. |

9.40.3.50 `virtual void LLGL::RenderSystem::WriteTexture ( Texture & texture, const SubTextureDescriptor & subTextureDesc, const ImageDescriptor & imageDesc )` [pure virtual]

Updates the image data of the specified texture.

#### Parameters

|    |                       |  |
|----|-----------------------|--|
| in | <i>texture</i>        | Specifies the texture whose data is to be updated.                       |
| in | <i>subTextureDesc</i> | Specifies the sub-texture descriptor.                                    |
| in | <i>imageDesc</i>      | Specifies the image data descriptor. Its "data" member must not be null! |

#### Remarks

This function can only be used for non-multi-sample textures (i.e. from types other than [TextureType::↔Texture2DMS](#) and [TextureType::Texture2DMSArray](#)),

The documentation for this class was generated from the following file:

- [RenderSystem.h](#)

## 9.41 LLGL::RenderSystemConfiguration Struct Reference

Render system configuration structure.

```
#include <RenderSystemFlags.h>
```

### Public Attributes

- [ColorRGBAub defaultImageColor](#) { 0, 0, 0, 0 }  
*Specifies the default color for an uninitialized textures. The default value is black (0, 0, 0, 0).*
- `std::size_t` [threadCount](#) = `maxThreadCount`  
*Specifies the number of threads that will be used internally by the render system. By default `maxThreadCount`.*

### 9.41.1 Detailed Description

Render system configuration structure.

### 9.41.2 Member Data Documentation

#### 9.41.2.1 [ColorRGBAub](#) LLGL::RenderSystemConfiguration::defaultImageColor { 0, 0, 0, 0 }

Specifies the default color for an uninitialized textures. The default value is black (0, 0, 0, 0).

#### Remarks

This will be used when a texture is created and no initial image data is specified.

#### 9.41.2.2 `std::size_t` LLGL::RenderSystemConfiguration::threadCount = `maxThreadCount`

Specifies the number of threads that will be used internally by the render system. By default `maxThreadCount`.

#### Remarks

This is mainly used by the Direct3D render systems, e.g. inside the "CreateTexture" and "WriteTexture" functions to convert the image data into the respective hardware texture format. OpenGL does this automatically.

#### See also

`maxThreadCount`

The documentation for this struct was generated from the following file:

- [RenderSystemFlags.h](#)

## 9.42 LLGL::RenderTarget Class Reference

Render target interface.

```
#include <RenderTarget.h>
```

### Public Member Functions

- virtual [~RenderTarget](#) ()
- virtual void [AttachDepthBuffer](#) (const Gs::Vector2ui &size)=0  
*Attaches an internal depth buffer to this render target.*
- virtual void [AttachStencilBuffer](#) (const Gs::Vector2ui &size)=0  
*Attaches an internal stencil buffer to this render target.*
- virtual void [AttachDepthStencilBuffer](#) (const Gs::Vector2ui &size)=0  
*Attaches an internal depth-stencil buffer to this render target.*
- virtual void [AttachTexture](#) ([Texture](#) &texture, const [RenderTargetAttachmentDescriptor](#) &attachmentDesc)=0  
*Attaches the specified texture to this render target.*
- virtual void [DetachAll](#) ()=0  
*Detaches all textures and depth-stencil buffers from this render target.*
- const Gs::Vector2ui & [GetResolution](#) () const  
*Returns the frame buffer resolution.*

### Protected Member Functions

- void [ApplyResolution](#) (const Gs::Vector2ui &resolution)
- void [ApplyMipResolution](#) ([Texture](#) &texture, unsigned int mipLevel)
- void [ResetResolution](#) ()

#### 9.42.1 Detailed Description

Render target interface.

##### Remarks

A render target in the broader sense is a composition of [Texture](#) objects which can be specified as the destination for drawing operations. After a texture has been attached to a render target, its image content is undefined until something has been rendered into the render target.

#### 9.42.2 Constructor & Destructor Documentation

9.42.2.1 virtual LLGL::RenderTarget::~~RenderTarget ( ) [virtual]

#### 9.42.3 Member Function Documentation

9.42.3.1 void LLGL::RenderTarget::ApplyMipResolution ( [Texture](#) & *texture*, unsigned int *mipLevel* ) [protected]

9.42.3.2 void LLGL::RenderTarget::ApplyResolution ( const Gs::Vector2ui & *resolution* ) [protected]

9.42.3.3 virtual void LLGL::RenderTarget::AttachDepthBuffer ( const Gs::Vector2ui & *size* ) [pure virtual]

Attaches an internal depth buffer to this render target.

## Parameters

|    |      |   |
|----|------|---|
| in | size | Specifies the size of the depth buffer. This must be the same as for all other attachemnts. |
|----|------|---|

## Remarks

Only a single depth buffer, stencil buffer, or depth-stencil buffer can be attached.

## See also

[AttachDepthStencilBuffer](#)

9.42.3.4 `virtual void LLGL::RenderTarget::AttachDepthStencilBuffer ( const Gs::Vector2ui & size ) [pure virtual]`

Attaches an internal depth-stencil buffer to this render target.

## Remarks

Only a single depth buffer, stencil buffer, or depth-stencil buffer can be attached.

## See also

[AttachDepthBuffer](#)

9.42.3.5 `virtual void LLGL::RenderTarget::AttachStencilBuffer ( const Gs::Vector2ui & size ) [pure virtual]`

Attaches an internal stencil buffer to this render target.

## Remarks

Only a single depth buffer, stencil buffer, or depth-stencil buffer can be attached.

## See also

[AttachDepthBuffer](#)

9.42.3.6 `virtual void LLGL::RenderTarget::AttachTexture ( Texture & texture, const RenderTargetAttachmentDescriptor & attachmentDesc ) [pure virtual]`

Attaches the specified texture to this render target.

## Parameters

|    |                       |   |
|----|-----------------------|---|
| in | <i>attachmnetDesc</i> | Specifies the attachment descriptor. Unused members will be ignored, e.g. the 'layer' member is ignored when a non-array texture is passed. |
|----|-----------------------|---|

**Note**

A mixed attachment of multi-sample and non-multi-sample textures to a render-target is currently only supported with: Direct3D 11.

**9.42.3.7** `virtual void LLGL::RenderTarget::DetachAll ( ) [pure virtual]`

Detaches all textures and depth-stencil buffers from this render target.

**9.42.3.8** `const Gs::Vector2ui& LLGL::RenderTarget::GetResolution ( ) const [inline]`

Returns the frame buffer resolution.

**Remarks**

This will be determined by the first texture attachment. Every further attachment must have the same size.

**9.42.3.9** `void LLGL::RenderTarget::ResetResolution ( ) [protected]`

The documentation for this class was generated from the following file:

- [RenderTarget.h](#)

## 9.43 LLGL::RenderTargetAttachmentDescriptor Struct Reference

Render target attachment descriptor structure.

```
#include <RenderTarget.h>
```

**Public Attributes**

- unsigned int [mipLevel](#) = 0  
*Specifies the MIP-map level which is to be attached to a render target.*
- unsigned int [layer](#) = 0  
*Array texture layer.*
- [AxisDirection](#) [cubeFace](#) = [AxisDirection::XPos](#)  
*Cube texture face.*

### 9.43.1 Detailed Description

Render target attachment descriptor structure.

### 9.43.2 Member Data Documentation

#### 9.43.2.1 AxisDirection LLGL::RenderTargetAttachmentDescriptor::cubeFace = AxisDirection::XPos

Cube texture face.

##### Remarks

This is only used for cube textures (i.e. [TextureType::TextureCube](#) and [TextureType::TextureCubeArray](#)).

#### 9.43.2.2 unsigned int LLGL::RenderTargetAttachmentDescriptor::layer = 0

Array texture layer.

##### Remarks

This is only used for array textures (i.e. [TextureType::Texture1DArray](#), [TextureType::Texture2DArray](#), [TextureType::TextureCubeArray](#), and [TextureType::Texture2DMSArray](#)).

#### 9.43.2.3 unsigned int LLGL::RenderTargetAttachmentDescriptor::mipLevel = 0

Specifies the MIP-map level which is to be attached to a render target.

##### Remarks

This is only used for non-multi-sample textures. All multi-sample textures will always use the first MIP-map level (i.e. [TextureType::Texture2DMS](#) and [TextureType::Texture2DMSArray](#)).

The documentation for this struct was generated from the following file:

- [RenderTarget.h](#)

## 9.44 LLGL::RenderTargetDescriptor Struct Reference

Render target descriptor structure.

```
#include <RenderTarget.h>
```

### Public Attributes

- [MultiSamplingDescriptor multiSampling](#)  
*Sampling descriptor.*
- bool [customMultiSampling](#) = false  
*Specifies whether custom multi-sampling is used or not. By default false.*

### 9.44.1 Detailed Description

Render target descriptor structure.

### 9.44.2 Member Data Documentation

#### 9.44.2.1 `bool LLGL::RenderTargetDescriptor::customMultiSampling = false`

Specifies whether custom multi-sampling is used or not. By default false.

#### Remarks

If this is true, only multi-sampled textures can be attached to a render-target, i.e. textures of the following types: Texture2DMS, Texture2DMSArray. If this is false, only non-multi-sampled textures can be attached to a render-target. This field will be ignored if multi-sampling is disabled.

#### 9.44.2.2 `MultiSamplingDescriptor LLGL::RenderTargetDescriptor::multiSampling`

Sampling descriptor.

The documentation for this struct was generated from the following file:

- [RenderTarget.h](#)

## 9.45 LLGL::Sampler Class Reference

[Sampler](#) interface.

```
#include <Sampler.h>
```

### Public Member Functions

[Sampler](#) interface.

## 9.45.2 Constructor & Destructor Documentation

9.45.2.1 `LLGL::Sampler::Sampler ( const Sampler & )` `[delete]`

9.45.2.2 `virtual LLGL::Sampler::~~Sampler ( )` `[inline],[virtual]`

9.45.2.3 `LLGL::Sampler::Sampler ( )` `[protected],[default]`

## 9.45.3 Member Function Documentation

9.45.3.1 `Sampler& LLGL::Sampler::operator= ( const Sampler & )` `[delete]`

The documentation for this class was generated from the following file:

- [Sampler.h](#)

## 9.46 LLGL::SamplerArray Class Reference

[Sampler](#) array interface.

```
#include <SamplerArray.h>
```

### Public Member Functions

- [SamplerArray](#) (const [SamplerArray](#) &)=delete
- [SamplerArray](#) & [operator=](#) (const [SamplerArray](#) &)=delete
- virtual [~SamplerArray](#) ()

### Protected Member Functions

- [SamplerArray](#) ()=default

## 9.46.1 Detailed Description

[Sampler](#) array interface.

## 9.46.2 Constructor & Destructor Documentation

9.46.2.1 `LLGL::SamplerArray::SamplerArray ( const SamplerArray & )` `[delete]`

9.46.2.2 `virtual LLGL::SamplerArray::~~SamplerArray ( )` `[inline],[virtual]`

9.46.2.3 `LLGL::SamplerArray::SamplerArray ( )` `[protected],[default]`

## 9.46.3 Member Function Documentation

9.46.3.1 `SamplerArray& LLGL::SamplerArray::operator= ( const SamplerArray & )` `[delete]`

The documentation for this class was generated from the following file:

- [SamplerArray.h](#)

## 9.47 LLGL::SamplerDescriptor Struct Reference

Texture sampler descriptor structure.

```
#include <SamplerFlags.h>
```

### Public Attributes

- `TextureWrap textureWrapU = TextureWrap::Repeat`  
*Texture coordinate wrap mode in U direction. By default `TextureWrap::Repeat`.*
- `TextureWrap textureWrapV = TextureWrap::Repeat`  
*Texture coordinate wrap mode in V direction. By default `TextureWrap::Repeat`.*
- `TextureWrap textureWrapW = TextureWrap::Repeat`  
*Texture coordinate wrap mode in W direction. By default `TextureWrap::Repeat`.*
- `TextureFilter minFilter = TextureFilter::Linear`  
*Minification filter. By default `TextureFilter::Linear`.*
- `TextureFilter magFilter = TextureFilter::Linear`  
*Magnification filter. By default `TextureFilter::Linear`.*
- `TextureFilter mipMapFilter = TextureFilter::Linear`  
*MIP-mapping filter. By default `TextureFilter::Linear`.*
- `bool mipMapping = true`  
*Specifies whether MIP-maps are used or not. By default true.*
- `float mipMapLODBias = 0.0f`  
*MIP-mapping level-of-detail (LOD) bias (or rather offset). By default 0.*
- `float minLOD = 0.0f`  
*Lower end of the MIP-map range. By default 0.*
- `float maxLOD = 1000.0f`  
*Upper end of the MIP-map range. Must be greater than or equal to "minLOD". By default 1000.*
- `unsigned int maxAnisotropy = 1`  
*Maximal anisotropy in the range [1, 16].*
- `bool depthCompare = false`  
*Specifies whether the compare operation for depth textures is to be used or not. By default false.*
- `CompareOp compareOp = CompareOp::Less`  
*Compare operation for depth textures. By default `CompareOp::Less`.*
- `ColorRGBAf borderColor = { 0.0f, 0.0f, 0.0f, 0.0f }`  
*Border color. By default black (0, 0, 0, 0).*

### 9.47.1 Detailed Description

Texture sampler descriptor structure.

### 9.47.2 Member Data Documentation

#### 9.47.2.1 ColorRGBAf LLGL::SamplerDescriptor::borderColor = { 0.0f, 0.0f, 0.0f, 0.0f }

Border color. By default black (0, 0, 0, 0).

#### 9.47.2.2 **CompareOp** LLGL::SamplerDescriptor::compareOp = CompareOp::Less

Compare operation for depth textures. By default [CompareOp::Less](#).

#### 9.47.2.3 **bool** LLGL::SamplerDescriptor::depthCompare = false

Specifies whether the compare operation for depth textures is to be used or not. By default false.

#### 9.47.2.4 **TextureFilter** LLGL::SamplerDescriptor::magFilter = TextureFilter::Linear

Magnification filter. By default [TextureFilter::Linear](#).

#### 9.47.2.5 **unsigned int** LLGL::SamplerDescriptor::maxAnisotropy = 1

Maximal anisotropy in the range [1, 16].

#### 9.47.2.6 **float** LLGL::SamplerDescriptor::maxLOD = 1000.0f

Upper end of the MIP-map range. Must be greater than or equal to "minLOD". By default 1000.

#### 9.47.2.7 **TextureFilter** LLGL::SamplerDescriptor::minFilter = TextureFilter::Linear

Minification filter. By default [TextureFilter::Linear](#).

#### 9.47.2.8 **float** LLGL::SamplerDescriptor::minLOD = 0.0f

Lower end of the MIP-map range. By default 0.

#### 9.47.2.9 **TextureFilter** LLGL::SamplerDescriptor::mipMapFilter = TextureFilter::Linear

MIP-mapping filter. By default [TextureFilter::Linear](#).

#### 9.47.2.10 **float** LLGL::SamplerDescriptor::mipMapLODBias = 0.0f

MIP-mapping level-of-detail (LOD) bias (or rather offset). By default 0.

#### 9.47.2.11 **bool** LLGL::SamplerDescriptor::mipMapping = true

Specifies whether MIP-maps are used or not. By default true.

## 9.47.2.12 TextureWrap LLGL::SamplerDescriptor::textureWrapU = TextureWrap::Repeat

Texture coordinate wrap mode in U direction. By default [TextureWrap::Repeat](#).

## 9.47.2.13 TextureWrap LLGL::SamplerDescriptor::textureWrapV = TextureWrap::Repeat

Texture coordinate wrap mode in V direction. By default [TextureWrap::Repeat](#).

## 9.47.2.14 TextureWrap LLGL::SamplerDescriptor::textureWrapW = TextureWrap::Repeat

Texture coordinate wrap mode in W direction. By default [TextureWrap::Repeat](#).

The documentation for this struct was generated from the following file:

- [SamplerFlags.h](#)

## 9.48 LLGL::Scissor Struct Reference

[Scissor](#) dimensions.

```
#include <RenderContextFlags.h>
```

### Public Member Functions

- [Scissor](#) ()=default
- [Scissor](#) (const [Scissor](#) &)=default
- [Scissor](#) (int x, int y, int width, int height)

### Public Attributes

- int x = 0
- int y = 0
- int width = 0
- int height = 0

### 9.48.1 Detailed Description

[Scissor](#) dimensions.

#### Remarks

A scissor is in screen coordinates where the origin is in the left-top corner.

## 9.48.2 Constructor & Destructor Documentation

9.48.2.1 `LLGL::Scissor::Scissor ( )` [default]

9.48.2.2 `LLGL::Scissor::Scissor ( const Scissor & )` [default]

9.48.2.3 `LLGL::Scissor::Scissor ( int x, int y, int width, int height )` [inline]

## 9.48.3 Member Data Documentation

9.48.3.1 `int LLGL::Scissor::height = 0`

9.48.3.2 `int LLGL::Scissor::width = 0`

9.48.3.3 `int LLGL::Scissor::x = 0`

9.48.3.4 `int LLGL::Scissor::y = 0`

The documentation for this struct was generated from the following file:

- [RenderContextFlags.h](#)

## 9.49 LLGL::Shader Class Reference

[Shader](#) interface.

```
#include <Shader.h>
```

### Public Member Functions

- [Shader](#) (const [Shader](#) &)=delete
- [Shader](#) & [operator=](#) (const [Shader](#) &)=delete
- virtual [~Shader](#) ()
- virtual bool [Compile](#) (const [ShaderSource](#) &shaderSource)=0  
*Compiles the specified shader source.*
- virtual std::string [Disassemble](#) (int flags=0)  
*Disassembles the previously compiled shader byte code.*
- virtual std::string [QueryInfoLog](#) ()=0  
*Returns the information log after the shader compilation.*
- [ShaderType](#) [GetType](#) () const  
*Returns the type of this shader.*

### Protected Member Functions

- [Shader](#) (const [ShaderType](#) type)

### 9.49.1 Detailed Description

[Shader](#) interface.

### 9.49.2 Constructor & Destructor Documentation

9.49.2.1 LLGL::Shader::Shader ( const Shader & ) [delete]

9.49.2.2 virtual LLGL::Shader::~~Shader ( ) [virtual]

9.49.2.3 LLGL::Shader::Shader ( const ShaderType *type* ) [protected]

### 9.49.3 Member Function Documentation

9.49.3.1 virtual bool LLGL::Shader::Compile ( const ShaderSource & *shaderSource* ) [pure virtual]

Compiles the specified shader source.

#### Parameters

|    |                     |                                   |
|----|---------------------|-----------------------------------|
| in | <i>shaderSource</i> | Specifies the shader source code. |
|----|---------------------|-----------------------------------|

#### Returns

True on success, otherwise "QueryInfoLog" can be used to query the reason for failure.

#### See also

[QueryInfoLog](#)

9.49.3.2 virtual std::string LLGL::Shader::Disassemble ( int *flags* = 0 ) [virtual]

Disassembles the previously compiled shader byte code.

#### Parameters

|    |              |   |
|----|--------------|---|
| in | <i>flags</i> | Specifies optional disassemble flags. This can be a bitwise OR combination of the ' <a href="#">ShaderDisassembleFlags</a> ' enumeration entries. By default 0. |
|----|--------------|---|

#### Returns

Disassembled assembler code or an empty string if disassembling was not possible.

#### Note

Only supported with: Direct3D 11, Direct3D 12 (for HLSL).

#### 9.49.3.3 ShaderType LLGL::Shader::GetType ( ) const [inline]

Returns the type of this shader.

#### 9.49.3.4 Shader& LLGL::Shader::operator= ( const Shader & ) [delete]

#### 9.49.3.5 virtual std::string LLGL::Shader::QueryInfoLog ( ) [pure virtual]

Returns the information log after the shader compilation.

The documentation for this class was generated from the following file:

- [Shader.h](#)

## 9.50 LLGL::ShaderCompileFlags Struct Reference

[Shader](#) compilation flags enumeration.

```
#include <ShaderFlags.h>
```

### Public Types

- enum {  
[Debug](#) = (1 << 0), [O1](#) = (1 << 1), [O2](#) = (1 << 2), [O3](#) = (1 << 3),  
[WarnError](#) = (1 << 4) }

#### 9.50.1 Detailed Description

[Shader](#) compilation flags enumeration.

#### 9.50.2 Member Enumeration Documentation

##### 9.50.2.1 anonymous enum

##### Enumerator

- Debug*** Insert debug information.
- O1*** Optimization level 1.
- O2*** Optimization level 2.
- O3*** Optimization level 3.
- WarnError*** Warnings are treated as errors.

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.51 LLGL::ShaderDisassembleFlags Struct Reference

[Shader](#) disassemble flags enumeration.

```
#include <ShaderFlags.h>
```

### Public Types

- enum { [InstructionOnly](#) = (1 << 0) }

#### 9.51.1 Detailed Description

[Shader](#) disassemble flags enumeration.

#### 9.51.2 Member Enumeration Documentation

##### 9.51.2.1 anonymous enum

##### Enumerator

***InstructionOnly*** Show only instructions in disassembly output.

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.52 LLGL::ShaderProgram Class Reference

[Shader](#) program interface.

```
#include <ShaderProgram.h>
```

## Public Member Functions

- [ShaderProgram](#) (const [ShaderProgram](#) &)=delete
- [ShaderProgram](#) & operator= (const [ShaderProgram](#) &)=delete
- virtual [~ShaderProgram](#) ()
- virtual void [AttachShader](#) ([Shader](#) &shader)=0
 

*Attaches the specified shader to this shader program.*
- virtual void [DetachAll](#) ()=0
 

*Detaches all shaders from this shader program.*
- virtual bool [LinkShaders](#) ()=0
 

*Links all attached shaders to the final shader program.*
- virtual std::string [QueryInfoLog](#) ()=0
 

*Returns the information log after the shader linkage.*
- virtual std::vector< [VertexAttribute](#) > [QueryVertexAttributes](#) () const =0
 

*Returns a list of vertex attributes, which describe all vertex attributes within this shader program.*
- virtual std::vector< [StreamOutputAttribute](#) > [QueryStreamOutputAttributes](#) () const =0
 

*Returns a list of stream-output attributes, which describes all stream-output attributes within this shader program.*
- virtual std::vector< [ConstantBufferViewDescriptor](#) > [QueryConstantBuffers](#) () const =0
 

*Returns a list of constant buffer view descriptors, which describe all constant buffers within this shader program.*
- virtual std::vector< [StorageBufferViewDescriptor](#) > [QueryStorageBuffers](#) () const =0
 

*Returns a list of storage buffer view descriptors, which describe all storage buffers within this shader program.*
- virtual std::vector< [UniformDescriptor](#) > [QueryUniforms](#) () const =0
 

*Returns a list of uniform descriptors, which describe all uniforms within this shader program.*
- virtual void [BuildInputLayout](#) (const [VertexFormat](#) &vertexFormat)=0
 

*Builds the input layout with the specified vertex format for this shader program.*
- virtual void [BindConstantBuffer](#) (const std::string &name, unsigned int bindingIndex)=0
 

*Binds the specified constant buffer to this shader.*
- virtual void [BindStorageBuffer](#) (const std::string &name, unsigned int bindingIndex)=0
 

*Binds the specified storage buffer to this shader.*
- virtual [ShaderUniform](#) \* [LockShaderUniform](#) ()=0
 

*Locks the shader uniform handler.*
- virtual void [UnlockShaderUniform](#) ()=0
 

*Unlocks the shader uniform handler.*

## Protected Member Functions

- [ShaderProgram](#) ()=default

### 9.52.1 Detailed Description

[Shader](#) program interface.

### 9.52.2 Constructor & Destructor Documentation

9.52.2.1 LLGL::ShaderProgram::ShaderProgram ( const ShaderProgram & ) [delete]

9.52.2.2 virtual LLGL::ShaderProgram::~~ShaderProgram ( ) [inline],[virtual]

9.52.2.3 LLGL::ShaderProgram::ShaderProgram ( ) [protected],[default]

### 9.52.3 Member Function Documentation

9.52.3.1 virtual void LLGL::ShaderProgram::AttachShader ( Shader & *shader* ) [pure virtual]

Attaches the specified shader to this shader program.

## Parameters

|    |               |   |
|----|---------------|---|
| in | <i>shader</i> | Specifies the shader which is to be attached to this shader program. Each shader type can only be added once for each shader program. |
|----|---------------|---|

## Remarks

This must be called, before "LinkShaders" is called.

## Exceptions

|                              |   |
|------------------------------|---|
| <i>std::invalid_argument</i> | If a shader is attached to this shader program, which is not allowed in the current state. This will happen if a different shader of the same type has already been attached to this shader program for instance. |
|------------------------------|---|

## See also

[Shader::GetType](#)

**9.52.3.2** `virtual void LLGL::ShaderProgram::BindConstantBuffer ( const std::string & name, unsigned int bindingIndex )`  
`[pure virtual]`

Binds the specified constant buffer to this shader.

## Parameters

|    |                     |  |
|----|---------------------|--|
| in | <i>name</i>         | Specifies the name of the constant buffer within this shader.  |
| in | <i>bindingIndex</i> | Specifies the binding index. This index must match the index which will be used for "RenderContext::BindConstantBuffer". |

## Remarks

This function is only necessary if the binding index does not match the default binding index of the constant buffer within the shader.

## See also

[QueryConstantBuffers](#)  
 RenderContext::BindConstantBuffer

**9.52.3.3** `virtual void LLGL::ShaderProgram::BindStorageBuffer ( const std::string & name, unsigned int bindingIndex )`  
`[pure virtual]`

Binds the specified storage buffer to this shader.

## Parameters

|    |                     |   |
|----|---------------------|---|
| in | <i>name</i>         | Specifies the name of the storage buffer within this shader.  |
| in | <i>bindingIndex</i> | Specifies the binding index. This index must match the index which will be used for "RenderContext::BindStorageBuffer". |

## Remarks

This function is only necessary if the binding index does not match the default binding index of the storage buffer within the shader.

## See also

RenderContext::BindStorageBuffer

**9.52.3.4** `virtual void LLGL::ShaderProgram::BuildInputLayout ( const VertexFormat & vertexFormat )` [pure virtual]

Builds the input layout with the specified vertex format for this shader program.

## Parameters

|    |                     |                                    |
|----|---------------------|------------------------------------|
| in | <i>vertexFormat</i> | Specifies the input vertex format. |
|----|---------------------|------------------------------------|

## Remarks

This is only required for a shader program, which has an attached vertex shader. Moreover, this can only be called after shader compilation but before shader program linkage!

## See also

AttachShader(VertexShader&  
[Shader::Compile](#)  
[LinkShaders](#)

## Exceptions

|                              |   |
|------------------------------|---|
| <i>std::invalid_argument</i> | If the name of an vertex attribute is invalid or the maximal number of available vertex attributes is exceeded. |
|------------------------------|---|

**9.52.3.5** `virtual void LLGL::ShaderProgram::DetachAll ( )` [pure virtual]

Detaches all shaders from this shader program.

## Remarks

After this call, the link status will be invalid, and the shader program must be linked again.

See also

[LinkShaders](#)

**9.52.3.6** `virtual bool LLGL::ShaderProgram::LinkShaders ( )` [pure virtual]

Links all attached shaders to the final shader program.

Returns

True on success, otherwise "QueryInfoLog" can be used to query the reason for failure.

Remarks

Each attached shader must be compiled first!

See also

[QueryInfoLog](#)

**9.52.3.7** `virtual ShaderUniform* LLGL::ShaderProgram::LockShaderUniform ( )` [pure virtual]

Locks the shader uniform handler.

Returns

Pointer to the shader uniform handler or null if the render system does not support individual shader uniforms.

Remarks

This must be called to set individual shader uniforms.

```
auto uniform = shaderProgram->LockShaderUniform();
if (uniform)
{
    uniform->SetUniform("mySampler1", 0);
    uniform->SetUniform("mySampler2", 1);
    uniform->SetUniform("projection", myProjectionMatrix);
}
shaderProgram->UnlockShaderUniform();
```

Note

Only supported with: OpenGL.

See also

[UnlockShaderUniform](#)

9.52.3.8 **ShaderProgram&** LLGL::ShaderProgram::operator= ( const ShaderProgram & ) [delete]

9.52.3.9 virtual std::vector<ConstantBufferViewDescriptor> LLGL::ShaderProgram::QueryConstantBuffers ( ) const  
[pure virtual]

Returns a list of constant buffer view descriptors, which describe all constant buffers within this shader program.

#### Remarks

Also called "Uniform Buffer Object".

9.52.3.10 virtual std::string LLGL::ShaderProgram::QueryInfoLog ( ) [pure virtual]

Returns the information log after the shader linkage.

9.52.3.11 virtual std::vector<StorageBufferViewDescriptor> LLGL::ShaderProgram::QueryStorageBuffers ( ) const  
[pure virtual]

Returns a list of storage buffer view descriptors, which describe all storage buffers within this shader program.

#### Remarks

Also called "Shader Storage Buffer Object" or "Read/Write Buffer".

9.52.3.12 virtual std::vector<StreamOutputAttribute> LLGL::ShaderProgram::QueryStreamOutputAttributes ( ) const  
[pure virtual]

Returns a list of stream-output attributes, which describes all stream-output attributes within this shader program.

9.52.3.13 virtual std::vector<UniformDescriptor> LLGL::ShaderProgram::QueryUniforms ( ) const [pure  
virtual]

Returns a list of uniform descriptors, which describe all uniforms within this shader program.

#### Remarks

[Shader](#) uniforms are only supported in OpenGL 2.0+.

9.52.3.14 virtual std::vector<VertexAttribute> LLGL::ShaderProgram::QueryVertexAttributes ( ) const [pure  
virtual]

Returns a list of vertex attributes, which describe all vertex attributes within this shader program.

9.52.3.15 virtual void LLGL::ShaderProgram::UnlockShaderUniform ( ) [pure virtual]

Unlocks the shader uniform handler.

### 9.53.1 Detailed Description

[Shader](#) source code structure.

### 9.53.2 Constructor & Destructor Documentation

#### 9.53.2.1 LLGL::ShaderSource::ShaderSource ( const std::string & *sourceCode* ) `[inline]`

Constructor with shader source code for GLSL.

## Parameters

|    |                   |                                   |
|----|-------------------|-----------------------------------|
| in | <i>sourceCode</i> | Specifies the shader source code. |
|----|-------------------|-----------------------------------|

## Note

Only supported with: OpenGL.

### 9.53.2.2 LLGL::ShaderSource::ShaderSource ( std::string && *sourceCode* ) [inline]

Constructor with shader source code for GLSL.

## Parameters

|    |                   |  |
|----|-------------------|--|
| in | <i>sourceCode</i> | Specifies the shader source code with move semantic. |
|----|-------------------|--|

## Note

Only supported with: OpenGL.

### 9.53.2.3 LLGL::ShaderSource::ShaderSource ( const std::string & *sourceCode*, const std::string & *entryPoint*, const std::string & *target*, long *flags* = 0 ) [inline]

Constructor with shader source code for HLSL.

## Parameters

|    |                   |   |
|----|-------------------|---|
| in | <i>sourceCode</i> | Specifies the shader source code.   |
| in | <i>entryPoint</i> | Specifies the shader entry point.   |
| in | <i>target</i>     | Specifies the shader version target (see <a href="https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx">https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx</a> ). |
| in | <i>flags</i>      | Specifies optional compilation flags. This can be a bitwise OR combination of the 'ShaderCompileFlags' enumeration entries. By default 0.   |

## See also

[ShaderCompileFlags](#)

## Note

Only supported with: Direct3D 11, Direct3D 12.

### 9.53.2.4 LLGL::ShaderSource::ShaderSource ( std::string && *sourceCode*, const std::string & *entryPoint*, const std::string & *target*, long *flags* = 0 ) [inline]

Constructor with shader source code for HLSL.

## Parameters

|    |                   |   |
|----|-------------------|---|
| in | <i>sourceCode</i> | Specifies the shader source code with move semantic.  |
| in | <i>entryPoint</i> | Specifies the shader entry point.   |
| in | <i>target</i>     | Specifies the shader version target (see <a href="https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx">https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx</a> ). |
| in | <i>flags</i>      | Specifies optional compilation flags. This can be a bitwise OR combination of the 'ShaderCompileFlags' enumeration entries. By default 0.   |

## See also

[ShaderCompileFlags](#)

## Note

Only supported with: Direct3D 11, Direct3D 12.

## 9.53.3 Member Data Documentation

## 9.53.3.1 std::string LLGL::ShaderSource::sourceCode

[Shader](#) source code string.

## 9.53.3.2 SourceHLSL LLGL::ShaderSource::sourceHLSL

Additional HLSL shader source descriptor.

## 9.53.3.3 StreamOutput LLGL::ShaderSource::streamOutput

Optional stream output for a geometry shader (or a vertex shader when used with OpenGL).

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.54 LLGL::ShaderStageFlags Struct Reference

[Shader](#) stage flags.

```
#include <ShaderFlags.h>
```

## Public Types

- enum {  
[VertexStage](#) = (1 << 0), [TessControlStage](#) = (1 << 1), [TessEvaluationStage](#) = (1 << 2), [GeometryStage](#) = (1 << 3),  
[FragmentStage](#) = (1 << 4), [ComputeStage](#) = (1 << 5), [ReadOnlyResource](#) = (1 << 6), [AllTessStages](#) = (TessControlStage | TessEvaluationStage),  
[AllGraphicsStages](#) = (VertexStage | AllTessStages | GeometryStage | FragmentStage), [AllStages](#) = (AllGraphicsStages | ComputeStage) }

### 9.54.1 Detailed Description

[Shader](#) stage flags.

#### Remarks

Specifies which shader stages are affected by a state change, e.g. to which shader stages a constant buffer is set. For the render systems, which do not support these flags, always all shader stages are affected.

#### Note

Only supported with: Direct3D 11, Direct3D 12

### 9.54.2 Member Enumeration Documentation

#### 9.54.2.1 anonymous enum

##### Enumerator

**[VertexStage](#)** Specifies the vertex shader stage.

**[TessControlStage](#)** Specifies the tessellation-control shader stage (also "Hull Shader").

**[TessEvaluationStage](#)** Specifies the tessellation-evaluation shader stage (also "Domain Shader").

**[GeometryStage](#)** Specifies the geometry shader stage.

**[FragmentStage](#)** Specifies the fragment shader stage (also "Pixel Shader").

**[ComputeStage](#)** Specifies the compute shader stage.

**[ReadOnlyResource](#)** Specifies whether a resource is bound to the shader stages for reading only.

##### Remarks

This can be used to set the shader-resource-view (SRV) of a storage buffer to the shader stages instead of the unordered-access-view (UAV), which is the default, if the storage buffer has such a UAV.

**[AllTessStages](#)** Specifies all tessellation stages, i.e. tessellation-control-, tessellation-evaluation shader stages.

**[AllGraphicsStages](#)** Specifies all graphics pipeline shader stages, i.e. vertex-, tessellation-, geometry-, and fragment shader stages.

**[AllStages](#)** Specifies all shader stages.

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.55 LLGL::ShaderUniform Class Reference

[Shader](#) uniform setter interface.

```
#include <ShaderUniform.h>
```

The documentation for this class was generated from the following file:

- [ShaderUniform.h](#)

## 9.56 LLGL::ShaderSource::SourceHLSL Struct Reference

Additional descriptor for HLSL shader source.

```
#include <ShaderFlags.h>
```

## Public Attributes

- std::string [entryPoint](#)  
*Shader entry point (this is the name of the shader main function).*
- std::string [target](#)  
*Shader version target (see [https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx)).*
- long [flags](#)  
*Optional compilation flags. This can be a bitwise OR combination of the 'ShaderCompileFlags' enumeration entries.*

### 9.56.1 Detailed Description

Additional descriptor for HLSL shader source.

### 9.56.2 Member Data Documentation

#### 9.56.2.1 std::string LLGL::ShaderSource::SourceHLSL::entryPoint

[Shader](#) entry point (this is the name of the shader main function).

#### 9.56.2.2 long LLGL::ShaderSource::SourceHLSL::flags

Optional compilation flags. This can be a bitwise OR combination of the '[ShaderCompileFlags](#)' enumeration entries.

#### 9.56.2.3 std::string LLGL::ShaderSource::SourceHLSL::target

[Shader](#) version target (see [https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820\(v=vs.85\).aspx](https://msdn.microsoft.com/en-us/library/windows/desktop/jj215820(v=vs.85).aspx)).

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.57 LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor Struct Reference

```
#include <RenderContextFlags.h>
```

## Public Attributes

- bool [screenSpaceOriginLowerLeft](#)  
*Specifies whether the screen-space origin is on the lower-left. By default false.*
- bool [invertFrontFace](#)  
*Specifies whether to invert front-facing. By default false.*
- [LogicOp](#) [logicOp](#)  
*Specifies the logical pixel operation for drawing operations. By default [LogicOp::Keep](#).*
- float [lineWidth](#)  
*Specifies the width to rasterize lines. By default 0.*

### 9.57.1 Member Data Documentation

#### 9.57.1.1 `bool LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor::invertFrontFace`

Specifies whether to invert front-facing. By default false.

##### Remarks

If this is true, the front facing (either `GL_CW` or `GL_CCW`) will be inverted, i.e. `CCW` becomes `CW`, and `CW` becomes `CCW`.

#### 9.57.1.2 `float LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor::lineWidth`

Specifies the width to rasterize lines. By default 0.

##### Remarks

If this is 0, the attribute is ignored and the current line width will not be changed.

##### See also

<https://www.opengl.org/sdk/docs/man/html/glLineWidth.xhtml>

#### 9.57.1.3 `LogicOp LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor::logicOp`

Specifies the logical pixel operation for drawing operations. By default [LogicOp::Keep](#).

##### See also

<https://www.opengl.org/sdk/docs/man/html/glLogicOp.xhtml>

#### 9.57.1.4 `bool LLGL::GraphicsAPIDependentStateDescriptor::StateOpenGLDescriptor::screenSpaceOriginLowerLeft`

Specifies whether the screen-space origin is on the lower-left. By default false.

##### Remarks

If this is true, the viewports and scissor rectangles of OpenGL are NOT emulated to the upper-left, which is the default to be uniform with other rendering APIs such as Direct3D and Vulkan.

The documentation for this struct was generated from the following file:

- [RenderContextFlags.h](#)

## 9.58 LLGL::StencilDescriptor Struct Reference

Stencil state descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- bool [testEnabled](#) = false  
*Specifies whether the stencil test is enabled or disabled.*
- [StencilFaceDescriptor front](#)  
*Specifies the front face settings for the stencil test.*
- [StencilFaceDescriptor back](#)  
*Specifies the back face settings for the stencil test.*

### 9.58.1 Detailed Description

Stencil state descriptor structure.

### 9.58.2 Member Data Documentation

#### 9.58.2.1 StencilFaceDescriptor LLGL::StencilDescriptor::back

Specifies the back face settings for the stencil test.

#### 9.58.2.2 StencilFaceDescriptor LLGL::StencilDescriptor::front

Specifies the front face settings for the stencil test.

#### 9.58.2.3 bool LLGL::StencilDescriptor::testEnabled = false

Specifies whether the stencil test is enabled or disabled.

### Remarks

If no pixel shader is used in the graphics pipeline, the stencil test must be disabled.

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.59 LLGL::StencilFaceDescriptor Struct Reference

Stencil face descriptor structure.

```
#include <GraphicsPipelineFlags.h>
```

### Public Attributes

- [StencilOp stencilFailOp](#) = [StencilOp::Keep](#)  
*Specifies the operation to take when the stencil test fails.*
- [StencilOp depthFailOp](#) = [StencilOp::Keep](#)  
*Specifies the operation to take when the stencil test passes but the depth test fails.*
- [StencilOp depthPassOp](#) = [StencilOp::Keep](#)  
*Specifies the operation to take when both the stencil test and the depth test pass.*
- [CompareOp compareOp](#) = [CompareOp::Less](#)  
*Specifies the stencil compare operation.*
- `std::uint32_t readMask` = `~0`  
*Specifies the portion of the depth-stencil buffer for reading stencil data. By default 0xffffffff.*
- `std::uint32_t writeMask` = `~0`  
*Specifies the portion of the depth-stencil buffer for writing stencil data. By default 0xffffffff.*
- `std::uint32_t reference` = `0`  
*Specifies the stencil reference value.*

### 9.59.1 Detailed Description

Stencil face descriptor structure.

### 9.59.2 Member Data Documentation

#### 9.59.2.1 [CompareOp](#) [LLGL::StencilFaceDescriptor::compareOp](#) = [CompareOp::Less](#)

Specifies the stencil compare operation.

#### 9.59.2.2 [StencilOp](#) [LLGL::StencilFaceDescriptor::depthFailOp](#) = [StencilOp::Keep](#)

Specifies the operation to take when the stencil test passes but the depth test fails.

#### 9.59.2.3 [StencilOp](#) [LLGL::StencilFaceDescriptor::depthPassOp](#) = [StencilOp::Keep](#)

Specifies the operation to take when both the stencil test and the depth test pass.

#### 9.59.2.4 `std::uint32_t LLGL::StencilFaceDescriptor::readMask = ~0`

Specifies the portion of the depth-stencil buffer for reading stencil data. By default 0xffffffff.

##### Note

For Direct3D 11 and Direct3D 12, only the first 8 least significant bits (`readMask & 0xff`) of the read mask value of the front face will be used.

##### See also

[StencilDescriptor::front](#)

#### 9.59.2.5 `std::uint32_t LLGL::StencilFaceDescriptor::reference = 0`

Specifies the stencil reference value.

##### Remarks

This value will be used when the stencil operation is [StencilOp::Replace](#).

##### Note

For Direct3D 11 and Direct3D 12, only the stencil reference value of the front face will be used.

##### See also

[StencilDescriptor::front](#)

#### 9.59.2.6 `StencilOp LLGL::StencilFaceDescriptor::stencilFailOp = StencilOp::Keep`

Specifies the operation to take when the stencil test fails.

#### 9.59.2.7 `std::uint32_t LLGL::StencilFaceDescriptor::writeMask = ~0`

Specifies the portion of the depth-stencil buffer for writing stencil data. By default 0xffffffff.

##### Note

For Direct3D 11 and Direct3D 12, only the first 8 least significant bits (`writeMask & 0xff`) of the write mask value of the front face will be used.

##### See also

[StencilDescriptor::front](#)

The documentation for this struct was generated from the following file:

- [GraphicsPipelineFlags.h](#)

## 9.60 LLGL::BufferDescriptor::StorageBufferDescriptor Struct Reference

```
#include <BufferFlags.h>
```

### Public Attributes

- [StorageBufferType storageType](#) = [StorageBufferType::Buffer](#)  
*Specifies the storage buffer type. By default [StorageBufferType::Buffer](#).*
- [VectorType vectorType](#) = [VectorType::Float4](#)  
*Specifies the vector type of a typed buffer.*
- unsigned int [stride](#) = 0  
*Specifies the stride (in bytes) of each element in a storage buffer.*

### 9.60.1 Member Data Documentation

#### 9.60.1.1 StorageBufferType LLGL::BufferDescriptor::StorageBufferDescriptor::storageType = StorageBufferType::Buffer

Specifies the storage buffer type. By default [StorageBufferType::Buffer](#).

#### Remarks

In OpenGL there are only generic storage buffers (or rather "Shader Storage Buffer Objects").

#### See also

[vectorType](#)

#### 9.60.1.2 unsigned int LLGL::BufferDescriptor::StorageBufferDescriptor::stride = 0

Specifies the stride (in bytes) of each element in a storage buffer.

#### Remarks

If this value is zero, the behavior of the buffer creation is undefined.

#### 9.60.1.3 VectorType LLGL::BufferDescriptor::StorageBufferDescriptor::vectorType = VectorType::Float4

Specifies the vector type of a typed buffer.

#### Remarks

This is only used if the storage type is either [StorageBufferType::Buffer](#) or [StorageBufferType::RWBuffer](#).

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.61 LLGL::StorageBufferViewDescriptor Struct Reference

Storage buffer shader-view descriptor structure.

```
#include <BufferFlags.h>
```

### Public Attributes

- `std::string name`  
*Storage buffer name.*
- `unsigned int index = 0`  
*Index of the storage buffer within the respective shader.*
- `StorageBufferType type = StorageBufferType::Buffer`  
*Storage buffer type.*

### 9.61.1 Detailed Description

Storage buffer shader-view descriptor structure.

#### Remarks

This structure is used to describe the view of a storage buffer within a shader.

### 9.61.2 Member Data Documentation

#### 9.61.2.1 `unsigned int LLGL::StorageBufferViewDescriptor::index = 0`

Index of the storage buffer within the respective shader.

#### 9.61.2.2 `std::string LLGL::StorageBufferViewDescriptor::name`

Storage buffer name.

#### 9.61.2.3 `StorageBufferType LLGL::StorageBufferViewDescriptor::type = StorageBufferType::Buffer`

Storage buffer type.

#### Remarks

For the OpenGL render system, this type is always '`StorageBufferType::Buffer`', since GLSL only supports generic shader storage buffers. Here is an example:

```
layout(std430, binding=0) buffer myBuffer
{
    vec4 myBufferArray[];
};
```

#### Note

Only supported with: Direct3D 11, Direct3D 12

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.62 LLGL::ShaderSource::StreamOutput Struct Reference

Additional descriptor for stream outputs.

```
#include <ShaderFlags.h>
```

### Public Attributes

- [StreamOutputFormat format](#)  
*Stream-output buffer format.*

### 9.62.1 Detailed Description

Additional descriptor for stream outputs.

### 9.62.2 Member Data Documentation

#### 9.62.2.1 StreamOutputFormat LLGL::ShaderSource::StreamOutput::format

Stream-output buffer format.

The documentation for this struct was generated from the following file:

- [ShaderFlags.h](#)

## 9.63 LLGL::StreamOutputAttribute Struct Reference

Stream-output attribute structure.

```
#include <StreamOutputAttribute.h>
```

### Public Member Functions

- [StreamOutputAttribute](#) ()=default
- [StreamOutputAttribute](#) (const [StreamOutputAttribute](#) &)=default
- [StreamOutputAttribute](#) & operator= (const [StreamOutputAttribute](#) &)=default

### Public Attributes

- std::string [name](#)  
*Vertex attribute name (for GLSL) or semantic name (for HLSL).*
- unsigned int [stream](#) = 0  
*Zero-based stream number. By default 0.*
- unsigned char [startComponent](#) = 0  
*Start vector component index, which is to be written. Must be 0, 1, 2, or 3. By default 0.*
- unsigned char [components](#) = 4  
*Number of vector components, which are to be written. Must be 1, 2, 3, or 4.*
- unsigned int [semanticIndex](#) = 0  
*Semantic index.*
- unsigned char [outputSlot](#) = 0  
*Stream-output buffer output slot.*

### 9.63.1 Detailed Description

Stream-output attribute structure.

### 9.63.2 Constructor & Destructor Documentation

9.63.2.1 `LLGL::StreamOutputAttribute::StreamOutputAttribute ( )` [default]

9.63.2.2 `LLGL::StreamOutputAttribute::StreamOutputAttribute ( const StreamOutputAttribute & )` [default]

### 9.63.3 Member Function Documentation

9.63.3.1 `StreamOutputAttribute& LLGL::StreamOutputAttribute::operator= ( const StreamOutputAttribute & )`  
[default]

### 9.63.4 Member Data Documentation

9.63.4.1 `unsigned char LLGL::StreamOutputAttribute::components = 4`

Number of vector components, which are to be written. Must be 1, 2, 3, or 4.

#### Remarks

The number of components plus the start component index (see 'startComponent') must not be larger than 4.

#### See also

[startComponent](#)

9.63.4.2 `std::string LLGL::StreamOutputAttribute::name`

Vertex attribute name (for GLSL) or semantic name (for HLSL).

9.63.4.3 `unsigned char LLGL::StreamOutputAttribute::outputSlot = 0`

Stream-output buffer output slot.

#### Remarks

This is used when multiple stream-output buffers are used simultaneously.

#### 9.63.4.4 unsigned int LLGL::StreamOutputAttribute::semanticIndex = 0

Semantic index.

##### Note

Only supported with: Direct3D 11, Direct3D 12.

#### 9.63.4.5 unsigned char LLGL::StreamOutputAttribute::startComponent = 0

Start vector component index, which is to be written. Must be 0, 1, 2, or 3. By default 0.

#### 9.63.4.6 unsigned int LLGL::StreamOutputAttribute::stream = 0

Zero-based stream number. By default 0.

The documentation for this struct was generated from the following file:

- [StreamOutputAttribute.h](#)

## 9.64 LLGL::StreamOutputFormat Struct Reference

Stream-output format descriptor structure.

```
#include <StreamOutputFormat.h>
```

### Public Member Functions

- void [AppendAttribute](#) (const [StreamOutputAttribute](#) &attrib)  
*Appends the specified stream-output attribute to this stream-output format.*
- void [AppendAttributes](#) (const [StreamOutputFormat](#) &format)  
*Append all attributes of the specified stream-output format.*

### Public Attributes

- std::vector< [StreamOutputAttribute](#) > [attributes](#)  
*Specifies the list of vertex attributes.*

### 9.64.1 Detailed Description

Stream-output format descriptor structure.

#### Remarks

A vertex format is required to describe how the vertex attributes are supported inside a vertex buffer.

### 9.64.2 Member Function Documentation

#### 9.64.2.1 void LLGL::StreamOutputFormat::AppendAttribute ( const StreamOutputAttribute & attrib )

Appends the specified stream-output attribute to this stream-output format.

## Parameters

|    |               |   |
|----|---------------|---|
| in | <i>attrib</i> | Specifies the new attribute which is appended to this stream-output format. |
|----|---------------|---|

9.64.2.2 void LLGL::StreamOutputFormat::AppendAttributes ( const StreamOutputFormat & *format* )

Append all attributes of the specified stream-output format.

## Remarks

This can be used to build a stream-output format for stream-output buffer arrays.

## 9.64.3 Member Data Documentation

## 9.64.3.1 std::vector&lt;StreamOutputAttribute&gt; LLGL::StreamOutputFormat::attributes

Specifies the list of vertex attributes.

## Remarks

Use "AppendAttribute" or "AppendAttributes" to append new attributes.

The documentation for this struct was generated from the following file:

- [StreamOutputFormat.h](#)

## 9.65 LLGL::SubTextureDescriptor Struct Reference

Sub-texture descriptor structure.

```
#include <TextureFlags.h>
```

## Classes

- struct [Texture1DDescriptor](#)
- struct [Texture2DDescriptor](#)
- struct [Texture3DDescriptor](#)
- struct [TextureCubeDescriptor](#)

## Public Member Functions

- [SubTextureDescriptor](#) ()
- [~SubTextureDescriptor](#) ()

## Public Attributes

- unsigned int [mipLevel](#)  
*MIP-map level for the sub-texture, where 0 is the base texture, and  $n > 0$  is the  $n$ -th MIP-map level.*
  - union {
    - [Texture1DDescriptor texture1D](#)  
*Descriptor for 1D- and 1D-Array textures.*
    - [Texture2DDescriptor texture2D](#)  
*Descriptor for 2D- and 2D-Array textures.*
    - [Texture3DDescriptor texture3D](#)  
*Descriptor for 3D textures.*
    - [TextureCubeDescriptor textureCube](#)  
*Descriptor for Cube- and Cube-Array textures.*
- };

### 9.65.1 Detailed Description

Sub-texture descriptor structure.

#### Remarks

This is used to write (or partially write) the image data of a texture MIP-map level.

### 9.65.2 Constructor & Destructor Documentation

9.65.2.1 `LLGL::SubTextureDescriptor::SubTextureDescriptor ( )` `[inline]`

9.65.2.2 `LLGL::SubTextureDescriptor::~~SubTextureDescriptor ( )` `[inline]`

### 9.65.3 Member Data Documentation

9.65.3.1 `union { ... }`

9.65.3.2 `unsigned int LLGL::SubTextureDescriptor::mipLevel`

MIP-map level for the sub-texture, where 0 is the base texture, and  $n > 0$  is the  $n$ -th MIP-map level.

9.65.3.3 `Texture1DDescriptor LLGL::SubTextureDescriptor::texture1D`

Descriptor for 1D- and 1D-Array textures.

9.65.3.4 `Texture2DDescriptor LLGL::SubTextureDescriptor::texture2D`

Descriptor for 2D- and 2D-Array textures.

### 9.65.3.5 Texture3DDescriptor LLGL::SubTextureDescriptor::texture3D

Descriptor for 3D textures.

### 9.65.3.6 TextureCubeDescriptor LLGL::SubTextureDescriptor::textureCube

Descriptor for Cube- and Cube-Array textures.

The documentation for this struct was generated from the following file:

- [TextureFlags.h](#)

## 9.66 LLGL::Texture Class Reference

[Texture](#) interface.

```
#include <Texture.h>
```

### Public Member Functions

- [Texture](#) (const [Texture](#) &)=delete
- [Texture](#) & [operator=](#) (const [Texture](#) &)=delete
- virtual [~Texture](#) ()
- [TextureType](#) [GetType](#) () const  
*Returns the type of this texture.*
- virtual [Gs::Vector3ui](#) [QueryMipLevelSize](#) (unsigned int mipLevel) const =0  
*Returns the texture size for the specified MIP-level.*

### Protected Member Functions

- [Texture](#) (const [TextureType](#) type)

### 9.66.1 Detailed Description

[Texture](#) interface.

### 9.66.2 Constructor & Destructor Documentation

9.66.2.1 LLGL::Texture::Texture ( const [Texture](#) & ) [delete]

9.66.2.2 virtual LLGL::Texture::~~Texture ( ) [virtual]

9.66.2.3 LLGL::Texture::Texture ( const [TextureType](#) type ) [protected]

### 9.66.3 Member Function Documentation

9.66.3.1 [TextureType](#) LLGL::Texture::GetType ( ) const [inline]

Returns the type of this texture.

9.66.3.2 [Texture&](#) LLGL::Texture::operator= ( const [Texture](#) & ) [delete]

9.66.3.3 virtual [Gs::Vector3ui](#) LLGL::Texture::QueryMipLevelSize ( unsigned int *mipLevel* ) const [pure virtual]

Returns the texture size for the specified MIP-level.

## Parameters

|    |                 |   |
|----|-----------------|---|
| in | <i>mipLevel</i> | Specifies the MIP-map level to query from. The first and largest MIP-map is level zero. If this level is greater than or equal to the number of MIP-maps this texture has, the return value is undefined (i.e. depends on the render system). |
|----|-----------------|---|

## See also

RenderContext::GenerateMips

The documentation for this class was generated from the following file:

- [Texture.h](#)

## 9.67 LLGL::SubTextureDescriptor::Texture1DDescriptor Struct Reference

```
#include <TextureFlags.h>
```

### Public Attributes

- unsigned int [x](#)  
*Sub-texture X-axis offset.*
- unsigned int [layerOffset](#)  
*Zero-based layer offset.*
- unsigned int [width](#)  
*Sub-texture width.*
- unsigned int [layers](#)  
*Number of texture array layers.*

### 9.67.1 Member Data Documentation

#### 9.67.1.1 unsigned int LLGL::SubTextureDescriptor::Texture1DDescriptor::layerOffset

Zero-based layer offset.

#### 9.67.1.2 unsigned int LLGL::SubTextureDescriptor::Texture1DDescriptor::layers

Number of texture array layers.

#### 9.67.1.3 unsigned int LLGL::SubTextureDescriptor::Texture1DDescriptor::width

Sub-texture width.

## 9.67.1.4 unsigned int LLGL::SubTextureDescriptor::Texture1DDescriptor::x

Sub-texture X-axis offset.

The documentation for this struct was generated from the following file:

- [TextureFlags.h](#)

## 9.68 LLGL::TextureDescriptor::Texture1DDescriptor Struct Reference

```
#include <TextureFlags.h>
```

### Public Attributes

*Texture height.*
- unsigned int [layers](#)  
*Number of texture array layers.*
- unsigned int [samples](#)  
*Number of samples.*
- bool [fixedSamples](#)  
*Specifies whether the sample locations are fixed or not. By default true.*

### 9.71.1 Member Data Documentation

#### 9.71.1.1 `bool LLGL::TextureDescriptor::Texture2DMSDescriptor::fixedSamples`

Specifies whether the sample locations are fixed or not. By default true.

##### Note

Only supported with: OpenGL.

#### 9.71.1.2 `unsigned int LLGL::TextureDescriptor::Texture2DMSDescriptor::height`

[Texture](#) height.

#### 9.71.1.3 `unsigned int LLGL::TextureDescriptor::Texture2DMSDescriptor::layers`

Number of texture array layers.

#### 9.71.1.4 `unsigned int LLGL::TextureDescriptor::Texture2DMSDescriptor::samples`

Number of samples.

#### 9.71.1.5 `unsigned int LLGL::TextureDescriptor::Texture2DMSDescriptor::width`

[Texture](#) width.

The documentation for this struct was generated from the following file:

- [TextureFlags.h](#)

## 9.72 `LLGL::TextureDescriptor::Texture3DDescriptor` Struct Reference

```
#include <TextureFlags.h>
```

[Texture](#) descriptor structure.

```
#include <TextureFlags.h>
```

### Classes

- struct [Texture1DDescriptor](#)
- struct [Texture2DDescriptor](#)
- struct [Texture2DMSDescriptor](#)
- struct [Texture3DDescriptor](#)
- struct [TextureCubeDescriptor](#)

### Public Member Functions

- [TextureDescriptor](#) ()
- [~TextureDescriptor](#) ()

### Public Attributes

- [TextureType](#) type  
*Texture type. By default [TextureType::Texture1D](#).*
- [TextureFormat](#) format  
*Texture hardware format. By default [TextureFormat::RGBA](#).*
- union {  
[Texture1DDescriptor](#) texture1D  
*Descriptor for 1D- and 1D-Array textures.*  
[Texture2DDescriptor](#) texture2D  
*Descriptor for 2D- and 2D-Array textures.*  
[Texture3DDescriptor](#) texture3D  
*Descriptor for 3D textures.*  
[TextureCubeDescriptor](#) textureCube  
*Descriptor for Cube- and Cube-Array textures.*  
[Texture2DMSDescriptor](#) texture2DMS  
*Descriptor for multi-sampled 2D- and 2D-Array textures.*  
};

### 9.77.1 Detailed Description

[Texture](#) descriptor structure.

#### Remarks

This is used to specify the dimensions of a texture which is to be created.

### 9.77.2 Constructor & Destructor Documentation

9.77.2.1 `LLGL::TextureDescriptor::TextureDescriptor ( )` `[inline]`

9.77.2.2 `LLGL::TextureDescriptor::~~TextureDescriptor ( )` `[inline]`

### 9.77.3 Member Data Documentation

9.77.3.1 `union { ... }`

9.77.3.2 `TextureFormat` `LLGL::TextureDescriptor::format`

[Texture](#) hardware format. By default [TextureFormat::RGBA](#).

9.77.3.3 `Texture1DDescriptor` `LLGL::TextureDescriptor::texture1D`

Descriptor for 1D- and 1D-Array textures.

9.77.3.4 `Texture2DDescriptor` `LLGL::TextureDescriptor::texture2D`

Descriptor for 2D- and 2D-Array textures.

9.77.3.5 `Texture2DMSDescriptor` `LLGL::TextureDescriptor::texture2DMS`

Descriptor for multi-sampled 2D- and 2D-Array textures.

9.77.3.6 `Texture3DDescriptor` `LLGL::TextureDescriptor::texture3D`

Descriptor for 3D textures.

9.77.3.7 `TextureCubeDescriptor` `LLGL::TextureDescriptor::textureCube`

Descriptor for Cube- and Cube-Array textures.

## 9.77.3.8 TextureType LLGL::TextureDescriptor::type

Texture type. By default [TextureType::Texture1D](#).

The documentation for this struct was generated from the following file:

- [TextureFlags.h](#)

## 9.78 LLGL::Timer Class Reference

```
#include <Timer.h>
```

## Public Types

- using [FrameCount](#) = unsigned long long

## Public Member Functions

- virtual [~Timer](#) ()
- virtual void [Start](#) ()=0  
*Starts the timer.*
- virtual double [Stop](#) ()=0  
*Stops the timer and returns the elapsed time since "Start" was called.*
- virtual double [GetFrequency](#) () const =0  
*Returns the frequency this timer can measure time (e.g. for milliseconds this is 1000.0).*
- void [MeasureTime](#) ()  
*Measures the time (elapsed time, and frame count) for each frame.*
- void [ResetFrameCounter](#) ()  
*Restes the frame counter.*
- double [GetDeltaTime](#) () const  
*Returns the elapsed time (in seconds) between the current and the previous frame.*
- [FrameCount](#) [GetFrameCount](#) () const  
*Returns the number of counted frames.*

## Static Public Member Functions

- static std::unique\_ptr< [Timer](#) > [Create](#) ()  
*Creates a platform specific timer object.*

### 9.78.1 Member Typedef Documentation

9.78.1.1 `using LLGL::Timer::FrameCount = unsigned long long`

### 9.78.2 Constructor & Destructor Documentation

9.78.2.1 `virtual LLGL::Timer::~~Timer ( ) [virtual]`

### 9.78.3 Member Function Documentation

9.78.3.1 `static std::unique_ptr<Timer> LLGL::Timer::Create ( ) [static]`

Creates a platform specific timer object.

9.78.3.2 `double LLGL::Timer::GetDeltaTime ( ) const [inline]`

Returns the elapsed time (in seconds) between the current and the previous frame.

#### Remarks

This requires that "MeasureTime" is called once every frame.

#### See also

[MeasureTime](#)

9.78.3.3 `FrameCount LLGL::Timer::GetFrameCount ( ) const [inline]`

Returns the number of counted frames.

#### Remarks

This requires that "MeasureTime" is called once every frame.

#### See also

[MeasureTime](#)

9.78.3.4 `virtual double LLGL::Timer::GetFrequency ( ) const [pure virtual]`

Returns the frequency this timer can measure time (e.g. for milliseconds this is 1000.0).

#### 9.78.3.5 void LLGL::Timer::MeasureTime ( )

Measures the time (elapsed time, and frame count) for each frame.

See also

[GetDeltaTime](#)  
[GetFrameCount\(\)](#)

#### 9.78.3.6 void LLGL::Timer::ResetFrameCounter ( )

Restes the frame counter.

See also

[GetFrameCount](#)

#### 9.78.3.7 virtual void LLGL::Timer::Start ( ) [pure virtual]

Starts the timer.

#### 9.78.3.8 virtual double LLGL::Timer::Stop ( ) [pure virtual]

Stops the timer and returns the elapsed time since "Start" was called.

The documentation for this class was generated from the following file:

- [Timer.h](#)

## 9.79 LLGL::UniformDescriptor Struct Reference

[Shader](#) uniform descriptor structure.

```
#include <ShaderUniform.h>
```

### Public Attributes

- std::string [name](#)
- [UniformType](#) type = [UniformType::Float](#)
- int [location](#) = 0
- unsigned int [size](#) = 0

### 9.79.1 Detailed Description

[Shader](#) uniform descriptor structure.

## 9.79.2 Member Data Documentation

9.79.2.1 `int LLGL::UniformDescriptor::location = 0`

9.79.2.2 `std::string LLGL::UniformDescriptor::name`

9.79.2.3 `unsigned int LLGL::UniformDescriptor::size = 0`

9.79.2.4 `UniformType LLGL::UniformDescriptor::type = UniformType::Float`

The documentation for this struct was generated from the following file:

- [ShaderUniform.h](#)

## 9.80 LLGL::VertexAttribute Struct Reference

Vertex attribute structure.

```
#include <VertexAttribute.h>
```

### Public Member Functions

- [VertexAttribute](#) ()=default
- [VertexAttribute](#) (const [VertexAttribute](#) &)=default
- [VertexAttribute](#) & [operator=](#) (const [VertexAttribute](#) &)=default
- [VertexAttribute](#) (const std::string &name, const [VectorType](#) vectorType, unsigned int instanceDivisor=0)  
*Constructs a vertex attribute with a specified name (used for GLSL).*
- [VertexAttribute](#) (const std::string &semanticName, unsigned int semanticIndex, const [VectorType](#) vectorType, unsigned int instanceDivisor=0)  
*Constructs a vertex attribute with a specified semantic (used for HLSL).*
- unsigned int [GetSize](#) () const  
*Returns the size (in bytes) which is required for this vertex attribute.*

### Public Attributes

- std::string [name](#)  
*Vertex attribute name (for GLSL) or semantic name (for HLSL).*
- [VectorType](#) [vectorType](#) = [VectorType::Float4](#)  
*Vector type of the vertex attribute. By default [VectorType::Float4](#).*
- unsigned int [instanceDivisor](#) = 0  
*Instance data divisor (or instance data step rate).*
- bool [conversion](#) = false  
*Specifies whether non-floating-point data types are to be converted to floating-points. By default false.*
- unsigned int [offset](#) = 0  
*Byte offset within each vertex. By default 0.*
- unsigned int [semanticIndex](#) = 0  
*Semantic index.*
- unsigned int [inputSlot](#) = 0  
*Vertex buffer input slot.*

### 9.80.1 Detailed Description

Vertex attribute structure.

### 9.80.2 Constructor & Destructor Documentation

**9.80.2.1** LLGL::VertexAttribute::VertexAttribute ( ) [default]

**9.80.2.2** LLGL::VertexAttribute::VertexAttribute ( const VertexAttribute & ) [default]

**9.80.2.3** LLGL::VertexAttribute::VertexAttribute ( const std::string & *name*, const VectorType *vectorType*, unsigned int *instanceDivisor* = 0 )

Constructs a vertex attribute with a specified name (used for GLSL).

#### Parameters

|    |                        |   |
|----|------------------------|---|
| in | <i>name</i>            | Specifies the attribute name (for GLSL).  |
| in | <i>vectorType</i>      | Specifies the vector type of the attribute.   |
| in | <i>instanceDivisor</i> | Specifies the divisor (or step rate) for instance data. If this is 0, this vertex attribute is considered to be per-vertex. By default 0. |

#### Remarks

This is equivalent to:

```
VertexAttribute(name, 0, dataType, components,
               instanceDivisor);
```

**9.80.2.4** LLGL::VertexAttribute::VertexAttribute ( const std::string & *semanticName*, unsigned int *semanticIndex*, const VectorType *vectorType*, unsigned int *instanceDivisor* = 0 )

Constructs a vertex attribute with a specified semantic (used for HLSL).

#### Parameters

|    |                        |   |
|----|------------------------|---|
| in | <i>semanticName</i>    | Specifies the semantic name (for HLSL).   |
| in | <i>semanticIndex</i>   | Specifies the semantic index (for HLSL).  |
| in | <i>vectorType</i>      | Specifies the vector type of the attribute.   |
| in | <i>instanceDivisor</i> | Specifies the divisor (or step rate) for instance data. If this is 0, this vertex attribute is considered to be per-vertex. By default 0. |

#### Remarks

This is equivalent to:

```
VertexAttribute(name, 0, dataType, components,
               instanceDivisor);
```

### 9.80.3 Member Function Documentation

#### 9.80.3.1 unsigned int LLGL::VertexAttribute::GetSize ( ) const

Returns the size (in bytes) which is required for this vertex attribute.

##### Returns

```
VectorTypeSize(vectorType) .
```

#### 9.80.3.2 VertexAttribute& LLGL::VertexAttribute::operator= ( const VertexAttribute & ) [default]

### 9.80.4 Member Data Documentation

#### 9.80.4.1 bool LLGL::VertexAttribute::conversion = false

Specifies whether non-floating-point data types are to be converted to floating-points. By default false.

#### 9.80.4.2 unsigned int LLGL::VertexAttribute::inputSlot = 0

Vertex buffer input slot.

##### Remarks

This is used when multiple vertex buffers are used simultaneously.

#### 9.80.4.3 unsigned int LLGL::VertexAttribute::instanceDivisor = 0

Instance data divisor (or instance data step rate).

##### Remarks

If this is 0, this attribute is considered to be stored per vertex. If this is greater than 0, this attribute is considered to be stored per every instanceDivisor's instance.

#### 9.80.4.4 std::string LLGL::VertexAttribute::name

Vertex attribute name (for GLSL) or semantic name (for HLSL).

#### 9.80.4.5 unsigned int LLGL::VertexAttribute::offset = 0

Byte offset within each vertex. By default 0.

## 9.80.4.6 unsigned int LLGL::VertexAttribute::semanticIndex = 0

Semantic index.

## Note

Only supported with: Direct3D 11, Direct3D 12.

## 9.80.4.7 VectorType LLGL::VertexAttribute::vectorType = VectorType::Float4

Vector type of the vertex attribute. By default [VectorType::Float4](#).

## Remarks

The double types are only supported with OpenGL, i.e. the vector types: [VectorType::Double](#), [VectorType::Double2](#), [VectorType::Double3](#), and [VectorType::Double4](#).

The documentation for this struct was generated from the following file:

- [VertexAttribute.h](#)

## 9.81 LLGL::BufferDescriptor::VertexBufferDescriptor Struct Reference

Vertex buffer descriptor structure.

```
#include <BufferFlags.h>
```

## Public Attributes

- [VertexFormat format](#)  
*Specifies the vertex format layout.*

## 9.81.1 Detailed Description

Vertex buffer descriptor structure.

## 9.81.2 Member Data Documentation

## 9.81.2.1 VertexFormat LLGL::BufferDescriptor::VertexBufferDescriptor::format

Specifies the vertex format layout.

## Remarks

This is required to tell the renderer how the vertex attributes are stored inside the vertex buffer and it must be the same vertex format which is used for the respective graphics pipeline shader program.

The documentation for this struct was generated from the following file:

- [BufferFlags.h](#)

## 9.82 LLGL::VertexFormat Struct Reference

Vertex format descriptor structure.

```
#include <VertexFormat.h>
```

### Public Member Functions

- void [AppendAttribute](#) (const [VertexAttribute](#) &attrib, unsigned int offset=[OffsetAppend](#))  
*Appends the specified vertex attribute to this vertex format.*
- void [AppendAttributes](#) (const [VertexFormat](#) &format)  
*Append all attributes of the specified vertex format.*

### Public Attributes

- std::vector< [VertexAttribute](#) > [attributes](#)  
*Specifies the list of vertex attributes.*
- unsigned int [stride](#) = 0  
*Specifies the vertex data stride (or format size) which describes the byte offset between consecutive vertices.*

### Static Public Attributes

- static const unsigned int [OffsetAppend](#) = ~0  
*Offset value to determine the offset automatically, so that a vertex attribute is appended at the end of a vertex format.*

### 9.82.1 Detailed Description

Vertex format descriptor structure.

#### Remarks

A vertex format is required to describe how the vertex attributes are supported inside a vertex buffer.

### 9.82.2 Member Function Documentation

#### 9.82.2.1 void LLGL::VertexFormat::AppendAttribute ( const [VertexAttribute](#) & *attrib*, unsigned int *offset* = [OffsetAppend](#) )

Appends the specified vertex attribute to this vertex format.

#### Parameters

|    |               |  |
|----|---------------|--|
| in | <i>attrib</i> | Specifies the new attribute which is appended to this vertex format.   |
| in | <i>offset</i> | Specifies the optional offset (in bytes) for this attribute. If this is 'OffsetAppend', the offset is determined by the previous vertex attribute offset plus its size. If there is no previous vertex attribute, the determined offset is 0. By default OffsetAppend. |

## Remarks

This function will always overwrite the 'offset' and 'inputSlot' members before the attribute is appended to this vertex format. The 'inputSlot' member will be set to the input slot value of the previous vertex attribute and is increased by one, if the new offset of the new vertex attribute is less than the offset plus size of the previous vertex attribute.

## Exceptions

|                                    |   |
|------------------------------------|---|
| <code>std::invalid_argument</code> | If 'attrib.components' is neither 1, 2, 3, nor 4. |
|------------------------------------|---|

## See also

[VertexAttribute::offset](#)  
[VertexAttribute::inputSlot](#)

9.82.2.2 void LLGL::VertexFormat::AppendAttributes ( const VertexFormat & *format* )

Append all attributes of the specified vertex format.

## Remarks

This can be used to build a vertex format for vertex buffer arrays.

## 9.82.3 Member Data Documentation

## 9.82.3.1 std::vector&lt;VertexAttribute&gt; LLGL::VertexFormat::attributes

Specifies the list of vertex attributes.

## Remarks

Use "AppendAttribute" or "AppendAttributes" to append new attributes.

## 9.82.3.2 const unsigned int LLGL::VertexFormat::OffsetAppend = ~0 [static]

Offset value to determine the offset automatically, so that a vertex attribute is appended at the end of a vertex format.

## See also

[AppendAttribute](#)

### 9.82.3.3 unsigned int LLGL::VertexFormat::stride = 0

Specifies the vertex data stride (or format size) which describes the byte offset between consecutive vertices.

#### Remarks

This is updated automatically everytime "AppendAttribute" or "AppendAttributes" is called, but it can also modified manually. It is commonly the size of all vertex attributes.

The documentation for this struct was generated from the following file:

- [VertexFormat.h](#)

## 9.83 LLGL::VideoAdapterDescriptor Struct Reference

Video adapter descriptor structure.

```
#include <VideoAdapter.h>
```

### Public Attributes

- std::wstring [name](#)  
*Hardware adapter name (name of the GPU).*
- std::string [vendor](#)  
*Vendor name.*
- unsigned long long [videoMemory](#) = 0  
*Video memory size (in bytes).*
- std::vector< [VideoOutput](#) > [outputs](#)  
*Adapter outputs.*

### 9.83.1 Detailed Description

Video adapter descriptor structure.

### 9.83.2 Member Data Documentation

#### 9.83.2.1 std::wstring LLGL::VideoAdapterDescriptor::name

Hardware adapter name (name of the GPU).

#### 9.83.2.2 std::vector<VideoOutput> LLGL::VideoAdapterDescriptor::outputs

Adapter outputs.

### 9.83.2.3 std::string LLGL::VideoAdapterDescriptor::vendor

Vendor name.

### 9.83.2.4 unsigned long long LLGL::VideoAdapterDescriptor::videoMemory = 0

Video memory size (in bytes).

The documentation for this struct was generated from the following file:

- [VideoAdapter.h](#)

## 9.84 LLGL::VideoDisplayMode Struct Reference

Video display mode structure.

```
#include <VideoAdapter.h>
```

### Public Attributes

- unsigned int [width](#) = 0  
*Display resolution width (in pixels).*
- unsigned int [height](#) = 0  
*Display resolution width (in height).*
- unsigned int [refreshRate](#) = 0  
*Refresh reate (in Hz).*

### 9.84.1 Detailed Description

Video display mode structure.

### 9.84.2 Member Data Documentation

#### 9.84.2.1 unsigned int LLGL::VideoDisplayMode::height = 0

Display resolution width (in height).

#### 9.84.2.2 unsigned int LLGL::VideoDisplayMode::refreshRate = 0

Refresh reate (in Hz).

#### 9.84.2.3 unsigned int LLGL::VideoDisplayMode::width = 0

Display resolution width (in pixels).

The documentation for this struct was generated from the following file:

- [VideoAdapter.h](#)

## 9.85 LLGL::VideoModeDescriptor Struct Reference

Video mode descriptor structure.

```
#include <RenderContextDescriptor.h>
```

### Public Attributes

- [Size resolution](#)  
*Screen resolution.*
- int [colorDepth](#) = 32  
*Color bit depth. Should be 24 or 32. By default 32.*
- bool [fullscreen](#) = false  
*Specifies whether to enable fullscreen mode or windowed mode. By default windowed mode.*
- [SwapChainMode swapChainMode](#) = [SwapChainMode::DoubleBuffering](#)  
*Swap chain buffering mode.*

### 9.85.1 Detailed Description

Video mode descriptor structure.

### 9.85.2 Member Data Documentation

#### 9.85.2.1 int LLGL::VideoModeDescriptor::colorDepth = 32

[Color](#) bit depth. Should be 24 or 32. By default 32.

#### 9.85.2.2 bool LLGL::VideoModeDescriptor::fullscreen = false

Specifies whether to enable fullscreen mode or windowed mode. By default windowed mode.

#### 9.85.2.3 Size LLGL::VideoModeDescriptor::resolution

Screen resolution.

#### 9.85.2.4 SwapChainMode LLGL::VideoModeDescriptor::swapChainMode = SwapChainMode::DoubleBuffering

Swap chain buffering mode.

The documentation for this struct was generated from the following file:

- [RenderContextDescriptor.h](#)

## 9.86 LLGL::VideoOutput Struct Reference

Video output structure.

```
#include <VideoAdapter.h>
```

### Public Attributes

- `std::vector< VideoDisplayMode > displayModes`  
*Video display mode list.*

#### 9.86.1 Detailed Description

Video output structure.

#### 9.86.2 Member Data Documentation

##### 9.86.2.1 `std::vector<VideoDisplayMode> LLGL::VideoOutput::displayModes`

Video display mode list.

The documentation for this struct was generated from the following file:

- [VideoAdapter.h](#)

## 9.87 LLGL::Viewport Struct Reference

[Viewport](#) dimensions.

```
#include <RenderContextFlags.h>
```

### Public Member Functions

- [Viewport](#) ()=default
- [Viewport](#) (const [Viewport](#) &)=default
- [Viewport](#) (float [x](#), float [y](#), float [width](#), float [height](#))
- [Viewport](#) (float [x](#), float [y](#), float [width](#), float [height](#), float [minDepth](#), float [maxDepth](#))

## Public Attributes

- float `x` = 0.0f  
*Left-top X coordinate.*
- float `y` = 0.0f  
*Left-top Y coordinate.*
- float `width` = 0.0f  
*Right-bottom width.*
- float `height` = 0.0f  
*Right-bottom height.*
- float `minDepth` = 0.0f  
*Minimal depth range.*
- float `maxDepth` = 1.0f  
*Maximal depth range.*

### 9.87.1 Detailed Description

`Viewport` dimensions.

#### Remarks

A viewport is in screen coordinates where the origin is in the left-top corner.

### 9.87.2 Constructor & Destructor Documentation

9.87.2.1 `LLGL::Viewport::Viewport ( )` `[default]`

9.87.2.2 `LLGL::Viewport::Viewport ( const Viewport & )` `[default]`

9.87.2.3 `LLGL::Viewport::Viewport ( float x, float y, float width, float height )` `[inline]`

9.87.2.4 `LLGL::Viewport::Viewport ( float x, float y, float width, float height, float minDepth, float maxDepth )` `[inline]`

### 9.87.3 Member Data Documentation

9.87.3.1 `float LLGL::Viewport::height = 0.0f`

Right-bottom height.

9.87.3.2 `float LLGL::Viewport::maxDepth = 1.0f`

Maximal depth range.

9.87.3.3 `float LLGL::Viewport::minDepth = 0.0f`

Minimal depth range.

9.87.3.4 float LLGL::Viewport::width = 0.0f

Right-bottom width.

9.87.3.5 float LLGL::Viewport::x = 0.0f

Left-top X coordinate.

9.87.3.6 float LLGL::Viewport::y = 0.0f

Left-top Y coordinate.

The documentation for this struct was generated from the following file:

- [RenderContextFlags.h](#)

## 9.88 LLGL::VsyncDescriptor Struct Reference

Vertical-synchronization (Vsync) descriptor structure.

```
#include <RenderContextDescriptor.h>
```

### Public Attributes

- bool [enabled](#) = false  
*Specifies whether vertical-synchronisation (Vsync) is enabled or disabled. By default disabled.*
- unsigned int [refreshRate](#) = 60  
*Refresh rate (in Hz). By default 60.*
- unsigned int [interval](#) = 1  
*Synchronisation interval. Can be 1, 2, 3, or 4. If Vsync is disabled, this value is implicit zero.*

### 9.88.1 Detailed Description

Vertical-synchronization (Vsync) descriptor structure.

### 9.88.2 Member Data Documentation

9.88.2.1 bool LLGL::VsyncDescriptor::enabled = false

Specifies whether vertical-synchronisation (Vsync) is enabled or disabled. By default disabled.

### 9.88.2.2 unsigned int LLGL::VsyncDescriptor::interval = 1

Synchronisation interval. Can be 1, 2, 3, or 4. If Vsync is disabled, this value is implicit zero.

### 9.88.2.3 unsigned int LLGL::VsyncDescriptor::refreshRate = 60

Refresh rate (in Hz). By default 60.

The documentation for this struct was generated from the following file:

- [RenderContextDescriptor.h](#)

## 9.89 LLGL::Window Class Reference

```
#include <Window.h>
```

### Classes

- class [EventListener](#)

### Public Member Functions

- virtual [~Window](#) ()
- virtual void [SetPosition](#) (const [Point](#) &position)=0
- virtual [Point](#) [GetPosition](#) () const =0
- virtual void [SetSize](#) (const [Size](#) &size, bool useClientArea=true)=0
- virtual [Size](#) [GetSize](#) (bool useClientArea=true) const =0
- virtual void [SetTitle](#) (const std::wstring &title)=0
- virtual std::wstring [GetTitle](#) () const =0
- virtual void [Show](#) (bool show=true)=0
- virtual bool [IsShown](#) () const =0
- virtual [WindowDescriptor](#) [QueryDesc](#) () const =0
  - Query a window descriptor, which describes the current state of this window.*
- virtual void [SetDesc](#) (const [WindowDescriptor](#) &desc)=0
  - Sets the new window descriptor.*
- virtual void [Recreate](#) (const [WindowDescriptor](#) &desc)=0
  - Recreates the internal window object. This may invalidate the native handle previously returned by "GetNativeHandle".*
- virtual void [GetNativeHandle](#) (void \*nativeHandle) const =0
  - Returns the native window handle.*
- bool [ProcessEvents](#) ()
  - Processes the events for this window (i.e. mouse movement, key presses etc.).*
- void [AddEventListener](#) (const std::shared\_ptr< [EventListener](#) > &eventListener)
- void [RemoveEventListener](#) (const [EventListener](#) \*eventListener)
- void [PostKeyDown](#) ([Key](#) keyCode)
- void [PostKeyUp](#) ([Key](#) keyCode)
- void [PostDoubleClick](#) ([Key](#) keyCode)
- void [PostChar](#) (wchar\_t chr)
- void [PostWheelMotion](#) (int motion)
- void [PostLocalMotion](#) (const [Point](#) &position)
- void [PostGlobalMotion](#) (const [Point](#) &motion)
- void [PostResize](#) (const [Size](#) &clientAreaSize)
- void [PostQuit](#) ()
  - Posts the 'OnQuit' event to all event listeners.*

## Static Public Member Functions

- static std::unique\_ptr< [Window](#) > [Create](#) (const [WindowDescriptor](#) &desc)

## Protected Member Functions

- virtual void [OnProcessEvents](#) ()=0

### 9.89.1 Constructor & Destructor Documentation

9.89.1.1 virtual LLGL::Window::~~Window ( ) [virtual]

### 9.89.2 Member Function Documentation

9.89.2.1 void LLGL::Window::AddEventListener ( const std::shared\_ptr< [EventListener](#) > & *eventListener* )

9.89.2.2 static std::unique\_ptr<[Window](#)> LLGL::Window::Create ( const [WindowDescriptor](#) & *desc* ) [static]

9.89.2.3 virtual void LLGL::Window::GetNativeHandle ( void \* *nativeHandle* ) const [pure virtual]

Returns the native window handle.

#### Remarks

This must be casted to a platform specific structure:

```
// Example for a custom Win32 window class
#include <LLGL/Platform/NativeHandle.h>
//...
void YourWindowClass::GetNativeHandle(void* nativeHandle)
{
    auto handle = reinterpret_cast<LLGL::NativeHandle*>(nativeHandle);
    //handle->window = 'some HWND window handle';
}
```

9.89.2.4 virtual [Point](#) LLGL::Window::GetPosition ( ) const [pure virtual]

9.89.2.5 virtual [Size](#) LLGL::Window::GetSize ( bool *useClientArea* =true ) const [pure virtual]

9.89.2.6 virtual std::wstring LLGL::Window::GetTitle ( ) const [pure virtual]

9.89.2.7 virtual bool LLGL::Window::IsShown ( ) const [pure virtual]

9.89.2.8 virtual void LLGL::Window::OnProcessEvents ( ) [protected],[pure virtual]

Called inside the "ProcessEvents" function after all event listeners received the same event.

#### See also

[ProcessEvents](#)  
[EventListener::OnProcessEvents](#)

9.89.2.10 void LLGL::Window::PostDoubleClick ( Key *keyCode* )

9.89.2.11 void LLGL::Window::PostGlobalMotion ( const Point & *motion* )

9.89.2.12 void LLGL::Window::PostKeyDown ( Key *keyCode* )

9.89.2.13 void LLGL::Window::PostKeyUp ( Key *keyCode* )

9.89.2.14 void LLGL::Window::PostLocalMotion ( const Point & *position* )

9.89.2.15 void LLGL::Window::PostQuit ( )

Posts the 'OnQuit' event to all event listeners.

#### Remarks

If at least one event listener returns false within the "OnQuit" callback, the window will not quit. If all event listener return true within the "OnQuit" callback, "ProcessEvents" will returns false from now on.

9.89.2.16 void LLGL::Window::PostResize ( const Size & *clientAreaSize* )

9.89.2.17 void LLGL::Window::PostWheelMotion ( int *motion* )

9.89.2.18 bool LLGL::Window::ProcessEvents ( )

Processes the events for this window (i.e. mouse movement, key presses etc.).

#### Returns

Once the "PostQuit" function was called on this window object, this function returns false. This will happend, when the user clicks on the close button.

9.89.2.19 virtual WindowDescriptor LLGL::Window::QueryDesc ( ) const [pure virtual]

[Query](#) a window descriptor, which describes the current state of this window.

9.89.2.20 virtual void LLGL::Window::Recreate ( const WindowDescriptor & *desc* ) [pure virtual]

Recreates the internal window object. This may invalidate the native handle previously returned by "GetNativeHandle".

#### See also

[GetNativeHandle](#)

9.89.2.21 void LLGL::Window::RemoveEventListener ( const EventListener \* *eventListener* )

9.89.2.22 virtual void LLGL::Window::SetDesc ( const WindowDescriptor & *desc* ) [pure virtual]

Sets the new window descriptor.

9.89.2.23 virtual void LLGL::Window::SetPosition ( const Point & *position* ) [pure virtual]

9.89.2.24 virtual void LLGL::Window::SetSize ( const Size & *size*, bool *useClientArea* = true ) [pure virtual]

9.89.2.25 virtual void LLGL::Window::SetTitle ( const std::wstring & *title* ) [pure virtual]

9.89.2.26 virtual void LLGL::Window::Show ( bool *show* = true ) [pure virtual]

The documentation for this class was generated from the following file:

- [Window.h](#)

## 9.90 LLGL::WindowDescriptor Struct Reference

[Window](#) descriptor structure.

```
#include <Window.h>
```

### Public Attributes

- std::wstring [title](#)
- [Point](#) [position](#)  
*Window position (relative to the client area).*
- [Size](#) [size](#)  
*Client area size.*
- bool [visible](#) = false
- bool [borderless](#) = false
- bool [resizable](#) = false
- bool [acceptDropFiles](#) = false
- bool [preventForPowerSafe](#) = false
- bool [centered](#) = false
- const void \* [windowContext](#) = nullptr  
*Window context handle.*

### 9.90.1 Detailed Description

[Window](#) descriptor structure.

## 9.90.2 Member Data Documentation

9.90.2.1 `bool LLGL::WindowDescriptor::acceptDropFiles = false`

9.90.2.2 `bool LLGL::WindowDescriptor::borderless = false`

9.90.2.3 `bool LLGL::WindowDescriptor::centered = false`

9.90.2.4 **Point** `LLGL::WindowDescriptor::position`

[Window](#) position (relative to the client area).

9.90.2.5 `bool LLGL::WindowDescriptor::preventForPowerSafe = false`

9.90.2.6 `bool LLGL::WindowDescriptor::resizable = false`

9.90.2.7 **Size** `LLGL::WindowDescriptor::size`

Client area size.

9.90.2.8 `std::wstring LLGL::WindowDescriptor::title`

9.90.2.9 `bool LLGL::WindowDescriptor::visible = false`

9.90.2.10 `const void* LLGL::WindowDescriptor::windowContext = nullptr`

[Window](#) context handle.

### Remarks

If used, this must be casted from a platform specific structure:

```
#include <LLGL/Platform/NativeHandle.h>
//...
LLGL::NativeContextHandle handle;
//handle.parentWindow = ...
windowDesc.windowContext = reinterpret_cast<const void*>(&handle);
```

The documentation for this struct was generated from the following file:

## Functions

- **LLGL\_EXPORT** unsigned int **LLGL::NumMipLevels** (unsigned int width, unsigned int height=1, unsigned int depth=1)  
Returns the number of MIP-map levels for a texture with the specified size.
- **LLGL\_EXPORT** bool **LLGL::IsCompressedFormat** (const TextureFormat format)  
Returns true if the specified texture format is a compressed format, i.e. either [TextureFormat::RGB\\_DXT1](#), [TextureFormat::RGBA\\_DXT1](#), [TextureFormat::RGBA\\_DXT3](#), or [TextureFormat::RGBA\\_DXT5](#).
- **LLGL\_EXPORT** bool **LLGL::IsArrayTexture** (const TextureType type)  
Returns true if the specified texture type is an array texture.
- **LLGL\_EXPORT** bool **LLGL::IsMultiSampleTexture** (const TextureType type)  
Returns true if the specified texture type is a multi-sample texture.

- [LLGL\\_EXPORT](#) BufferDescriptor [LLGL::VertexBufferDesc](#) (unsigned int size, const VertexFormat &vertexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for a vertex buffer.*
- [LLGL\\_EXPORT](#) BufferDescriptor [LLGL::IndexBufferDesc](#) (unsigned int size, const IndexFormat &indexFormat, long flags=0)  
*Returns a [BufferDescriptor](#) structure for an index buffer.*
- [LLGL\\_EXPORT](#) BufferDescriptor [LLGL::ConstantBufferDesc](#) (unsigned int size, long flags=BufferFlags::MapReadAccess|BufferFlags::MapWriteAccess|BufferFlags::DynamicUsage)  
*Returns a [BufferDescriptor](#) structure for a constant buffer.*
- [LLGL\\_EXPORT](#) BufferDescriptor [LLGL::StorageBufferDesc](#) (unsigned int size, const StorageBufferType storageType, unsigned int stride, long flags=BufferFlags::MapReadAccess|BufferFlags::MapWriteAccess)  
*Returns a [BufferDescriptor](#) structure for a storage buffer.*

## 10.48 Version.h File Reference

```
#include "Export.h"
#include <string>
```

### Namespaces

- [LLGL](#)
- [LLGL::Version](#)

### Functions

- [LLGL\\_EXPORT](#) unsigned int [LLGL::Version::GetMajor](#) ()  
*Returns the major [LLGL](#) version (e.g. 1 stands for "1.00").*
- [LLGL\\_EXPORT](#) unsigned int [LLGL::Version::GetMinor](#) ()  
*Returns the minor [LLGL](#) version (e.g. 1 stands for "0.01"). Must be less than 100.*
- [LLGL\\_EXPORT](#) unsigned int [LLGL::Version::GetRevision](#) ()  
*Returns the revision version number. Must be less than 100.*
- [LLGL\\_EXPORT](#) std::string [LLGL::Version::GetStatus](#) ()  
*Returns the [LLGL](#) version status (either "Alpha", "Beta", or empty).*
- [LLGL\\_EXPORT](#) unsigned int [LLGL::Version::GetID](#) ()  
*Returns the full [LLGL](#) version as an ID number (e.g. 200317 stands for "2.03 (Rev. 17)").*
- [LLGL\\_EXPORT](#) std::string [LLGL::Version::GetString](#) ()  
*Returns the full [LLGL](#) version as a string (e.g. "0.01 Beta (Rev. 1)").*
